HOUSE OF CARNATION ROBERT CRAIG
AT COLLEGE GARDENS

*Devoted to the
FLORIST, PLANTSMAN,
LANDSCAPE GARDENER
and
Kindred Interests*

*Published
EVERY SATURDAY
At 11 Hamilton Place,
BOSTON, MASS.
Subscription, \$1.00*

We are making no ABSURD CLAIMS for the NEW CARNATION

ROBERT CRAIG

But are DELIVERING the FULL QUOTA OF CUTTINGS on ALL our CONTRACTS from now on.

The most profitable **Scarlet Carnation** is in **FULL CROP** during the **HOLIDAYS**.

Scarlet Carnations blooming in November and Early Spring and failing to produce abundant Christmas crops are not the most profitable for the commercial worker.

ROBERT CRAIG produces a maximum crop of immense long stemmed blooms at Christmas that sell at higher prices than any other Scarlet Carnation yet offered on the market. It commences blooming in September and continues in steady crop till July and will produce

A Larger Christmas Crop

than any other Scarlet Carnation and equal the production of any other Scarlet variety, bloom for bloom, throughout the season. It has regularly defeated all other Scarlet Carnations at the leading flower shows during the past two years wherever it has been staged.

In proof of the value of **ROBERT CRAIG** read the following unparalleled Record of premiums won :

AT PHILADELPHIA

1. Silver Cup, for best American Seedling extant in 1904.
2. Same prize in 1905.
3. J. Hartman Kuhn Prize in 1904.
4. Same prize in 1905.

AT CHICAGO

5. Lawson Silver Medal for 1905.
6. Society American Florists' Silver Medal for 1905.
7. First for best 100 blooms Scarlet Seedling, 1905.
8. First for best 20 blooms Scarlet Seedling, 1905.
9. American Carnation Society's First class Certificate of Merit, 1905.

AT KANSAS CITY

10. Gold Medal for best Seedling Carnation, 1905.
11. Best 20 blooms any Scarlet, 1905.

CARNATION ROBERT CRAIG. SINGLE BLOOM

AT WORLD'S FAIR, ST. LOUIS

12. Silver Medal (special).
13. Best 100 blooms any Scarlet, 1905.

AT NEW YORK

14. Special Premium, American Institute.
- 15, 16. Two First Premiums, 1905.

17. First as best Scarlet at Tarrytown, N. Y., 1905.
18. First as best Scarlet at New Haven, Conn., 1905.
19. First as best Scarlet at Boston, Mass., 1905.
20. First as best Scarlet at Milwaukee, Wis., 1905.
21. First as best Scarlet at Providence, R. I., 1905.

Besides Numerous Certificates of Merit and Special Mentions

It produces the largest bloom, strongest stem, most vigorous and healthy habit of any Scarlet Carnation extant.

There will be **NO FLUNK** in **DELIVERING ROBERT CRAIG ON TIME** and you will receive your cuttings as promised provided you place your orders in season.

DELIVERY HAS ALREADY COMMENCED

MY MARYLAND

ANNOUNCEMENT TO THE TRADE:

We, The H. Weber & Sons Co. of Oakland, Md., respectfully announce that The E. G. Hill Co. of Richmond, Ind., have withdrawn from the contract made with us last Spring whereby they would have jointly with us, disseminated our new white carnation, My Maryland.

The variety has been on trial at Richmond, (3,000 plants), Brooklyn, (300 plants) Philadelphia, (1000 plants) and Toronto, (1000 plants).

Reports from the first two named places characterize the variety as being practically worthless, while from Toronto and Philadelphia favorable reports indicate that the variety is bearing out our claims for it.

Our own stock at Oakland is in elegant shape. An extremely wet Summer necessitated the holding of stock in a semi-dormant condition after being housed Aug. 15th to Sept. 1st, thus making stock too late for the Fall shows. Since Dec. 1st we have been cutting grand blooms, and to prove our claims for the variety we invite all interested to come to Oakland and look it over. While it is a source of regret to us that the variety has not proven satisfactory in all places tried, we are satisfied that it will prove our claims for it in at least some places besides our own.

We therefore announce that we will disseminate My Maryland as per our advertisements, but before shipping any stock we give to each and every one the right to cancel all or any portion of their orders.

JESSICA, we believe will succeed everywhere. It is even better than last year. As a red and white it has no competitor. Stock ready now. Price for both varieties, \$2.50 per doz., \$12.00 per 100, \$100.00 per 1000.

The H. Weber & Sons Co., Oakland, Md.

Sweet Pea Christmas

The new strain has proved to be very superior for florists' use. In habit it is similar to Blanche Ferry, the pink showing up brighter than in that old favorite. It is an early and continuous bloomer, coming into bloom in about ten weeks. When the bottom branches commence to flower, stems about fourteen inches long with four flowers on a spray are the rule. It is a dwarf grower, rarely reaching over five feet. Many of my customers have spoken highly of this strain, and I have pleasure in recommending it to all who grow sweet peas for the market.

THE BEST MARKET CHRYSANTHEMUMS

The National Chrysanthemum Society held an exhibition of market chrysanthemums recently and many of the market growers exhibited. You may be interested to have a note of some of the best sorts in each color. Among whites three of the best were Mme. Th. Panekoucke, a large flower with broad flat petals; Western King a favorite market white, a roundish bloom with somewhat loose, broad white petals; Mrs. J. Thompson, Japanese incurved, a very attractive flower. The most beautiful among the pinks was Framfield Pink, a charming reflexed flower, of rose pink coloring. Mme. L. Charvet, a globular bloom with reflexing petals, silvery white in the centre, the outer petals being deep rose-pink. Of crimsons Exmouth Crimson, deep crimson-red with bronze reverse to the broad petals, was one of the best. Among so-called bronze flowers Tuxedo was the favorite. The petals of this variety are notched, giving a curiously quaint appearance to the blooms. One of the finest yellows was Negoya, a beautiful Japanese with drooping rich yellow petals. Most of the blooms were arranged in market bunches, plenty of space being allowed between each flower. They were somewhat stiff in appearance perhaps, but nevertheless the individual blooms showed to excellent advantage. The finest new market chrysanthemum shown on this occasion was Golden Thompson, a sport from Yellow Mrs. Thompson. It is a Japanese incurved, with petals whose coloring was described by the exhibitor as terra-cotta bronze, really a light bronze. The flowers were of good size and the plant was said to be very free flowering. A large silver medal was awarded to this variety.

A small silver medal was given to the new chrysanthemum Old Gold, a handsome reflexed Japanese. The coloring in the center of the large and rather flat bloom is old gold, or almost bronze, fading to yellow towards the margin. It is a very beautiful flower. It was exhibited by Messrs. Wells and Co., Merstham, Surrey, who have introduced many good sorts. Another new variety that received a bronze medal is Miss Hilda Weekes, a sport from Niveus. This is a medium sized, full flower, with rather loose, white petals. The blooms are produced so freely as to form quite a mass at the end of the stems.

A NEW TREE CARNATION

The carnation shown in the accompanying illustration is a new one called Aurora which obtained an award of merit from the Royal Horticultural Society recently. It is a yellow ground fancy, the scarlet flakes being both clear and well defined. This new carnation serves to show that we may soon expect as much variety among the tree or winter-flowering sorts as we now have among the border carnations which are so popular here as summer flowers. All the best winter-flowering carnations are at present self-colored as

CARNATION AURORA

for instance nearly all those of American introduction: therefore the new scarlet and yellow Aurora is sure of a warm welcome. Soon we shall look forward to having almost as many carnations in winter as in summer, and the carnation is a flower that everyone admits we can have none too many of. An award of merit was given yesterday (December 19) to Fair Maid, one that has been familiar at our exhibitions for some months past. This and Enchantress are the two finest pink varieties.

Harry H. Thomas

Dracaenas (Cordyline)

Although many years ago colored-leaved dracaenas represented almost exclusively by *Dracaena terminalis*, were extensively grown by commercial men, it is only within the last few years that dracaenas in variety of choice sorts have been largely grown for the market in this country. *Dracaena terminalis* by reason of its long service, and many good points, is not likely to be discarded yet a while, but still it cannot be denied that in beauty of foliage, grace and rapidity of growth, it is out-classed entirely by Lord Wolesley and the wonder is that this latter variety was so long in gaining recognition. *Dracaena terminalis* was grown in the past chiefly for the beauty of its foliage. Lord Wolesley has still more beautiful foliage and though it may sound strange to some, it is nevertheless a fact, that under proper conditions it is a more rapid grower and as easy of culture as *terminalis*, besides being less inclined to flower when pot-bound than the older variety. These remarks on the comparative work of the newer variety are not intended as an attempt at the depreciation of the old favorite, but to remove an impression prevailing that the

newer and more intensely colored varieties are more difficult of culture and possessed of less enduring power than the older varieties.

Years ago authorities would have it that in order to produce good dracaenas their growth had to be exceedingly rapid and in a high temperature; no doubt, plants grown in this manner were rushed into maturity rapidly, but their decline was just as rapid as their advance and in the main they were of no practical value as dwelling house plants. Contrary to this method of growing dracaenas is the mode pursued now of growing them in a moderate temperature. By this I mean a house wherein the temperature may be as low as 58 degrees in zero weather outside; of course a temperature a little higher is preferable, but dracaenas have flourished without the loss of a leaf when exposed to the temperature stated and in addition matured to good enduring specimens, six of which took first premium at an exhibition the following fall.

There are various methods of propagating dracaenas, but the most prolific and interesting method of propagating existing varieties is by root and stem cuttings. When from use or through any other cause large plants have lost their bottom leaves, cut off the top about an inch below the lower leaves; this top put into a small pot in a compost of leaf mould and sand, placing the small pot into which the top has been put into a much larger one; this precaution will keep the heavy top from shaking and will also add to the available supply of moisture around the base; when done place it either in a propagating frame or on a bench having bottom heat underneath. This disposes of the top of the old plant for four or five weeks, when it should be rooted and a useful subject again. Now for the remaining part of the stem and the thick fleshy roots. These cut up into small pieces not more than an inch and a half in length and place them close together in a flat the bottom of which ought to have a sod laid on with the grass side down; unless the box or flat is very deep no more drainage is needed. Cover the pieces to the extent of about an inch with clean sand and leaf mould, then place the box over the pipes, keeping the soil continually moist without overwatering to the extent of soaking.

The cuttings can also be put in sand in a propagating bench, but small plants rooted in a mixture of sand and leaf mould are not liable to be checked when potted as these rooted in sand alone. When the young shoots are about 3 1-2 or 4 inches over the surface they can be severed from the stock with a knife, care being taken to take only those rooted; these may then be potted into small pots and need not be cut and re-rooted again unless they get ranky, which seldom occurs if they are removed early enough at first. One piece of stock will likely send up many young plants, therefore if it is necessary to lift the pieces of stock to remove the young plants, put the stock back again, repeating the process until the stock is exhausted.

Some growers still persist in mousing the tops of old plants, which no doubt is a safe method to pursue, al-

though no more so than the other, and by no means as expeditious.

Dracaenas in all stages of growth, in order to grow well, must have moisture all around them and always a little heat underneath. As has already been said they will stand and thrive in a comparatively low temperature if properly brought up to it, but they will not thrive in a house without moisture nor without bottom heat. In order to keep the plants in a vigorous condition it is essential that they be syringed regularly from underneath the foliage as well as given frequent showers from overhead.

David McIntosh.

Forcing Rhubarb

Persons who like to dabble in market gardening for pleasure or profit, will find both in raising rhubarb indoors. Simple and easily carried out are the essentials for a good crop. The roots are dug in the fall when the ground begins to freeze, and are stored somewhere out-of-doors where they will be easy to get at when the time comes to plant. They need no protection from climatic conditions. Big, healthy four-year-old roots are best of any early or medium early large-stalked variety. Planting may be done at any time after the plants get a short rest.

The beds are made in any old cellar, pit, frame, cave, or under greenhouse benches, where the temperature will not fall below 45 degrees. The darker it is the better, as lack of light causes the plants to send up stalks with little leaf surface, just what one desires. The soil is removed to a depth of about one foot from the space desired for a bed. Then an even lay of fresh horse manure is put in to a depth of four inches—if strawy it will make no difference—followed by two inches of good loam. The plants are placed on this about one foot apart, and then filled around with any handy material, such as the soil removed at the start. Give a good watering and exclude all light possible by means of boards, old carpets nailed up, or some such method. Some people use straw or hay, thickly covering the beds, but it is not as satisfactory for it keeps the ground cold, smells bad, makes the stalks spindling, and the bed is longer coming to maturity. If any of the sides of the trench are next to walls they should be lined with boards on those sides, and hay or sawdust packed in back of these, building up a foot or so above the surface of the ground to insure keeping out the frost.

Now you may sit down and wait for the crop. Besides an occasional watering if the bed becomes dry, no further care is required. The bed will begin to bear in from one to two or three months, the time varying with vitality and size of plants, temperature of beds, time of planting, etc.

R. S. Adams.

An Old English Garden

A few days ago while turning over the leaves of "Old Time Gardens," by Alice Morse Earle, I was much interested in reading about the old gardens in New England and in the pictures that adorn its pages. There are in England of course many old time gardens and I was forcibly reminded of this fact only a week or two ago when on my annual chrysanthemum rounds in the neighborhood of our great metropolis. At Brockwell Park, Herne Hill, once a suburban home of a private resident, but now a public park for the use of the inhabitants of this rapidly increasing and populous locality in the Southeast of London, enclosed within a high, red brick wall, which bears obvious evidence upon it of its great antiquity, is the old English garden belonging to the former holder of the estate.

Like most of the public parks under the control of the London County Council a gratuitous display of chrysanthemums is held here for some weeks at this season of the year. The plants, all in the full glory of intensive culture, are staged in a conservatory adjoining what was once the family mansion of the owner of the Brockwell Park estate. Passing beyond this towards the lake by way of a gravel path down a gentle declivity the courteous superintendent leads the way to the doorway, festooned in living greenery, and ushers us into the old English garden.

The visitor who a few moments before was conscious of London's ever-growing capacity for devouring all the green fields and country lanes within its immediate vicinity is now sublimely charmed at the sudden transition from bricks and mortar to the calm repose and delightful solitude of an old time garden that might be a hundred miles away from any town or human habitation, so completely is it walled in from outside appearances.

In the middle is an old fountain, fenced in with wire work, the water of which is leisurely splashing down into a circular basin beneath. Around it are bamboos, various forms of *Iris Germanica*, ferns, *Megasea cordifolia* and the numerous other subjects forming a veritable wild garden. From the fountain radiate paths that lead in all directions. At this season of the year all the occupants bear evidence of the autumn time and early frosts but enough are left to show the visitor that a rich profusion of herbaceous plants have gaily contributed to the enjoyment of the earlier visitors. Some plants of *Chrysanthemum coronarium*, both white and yellow, are still in flower, pansies are still struggling to bloom. The bright colored *Physalis Franchetti* lends color to several otherwise dull corners while at various intervals we notice chrysanthemums, mainly of the early flowering type, still in bloom, clumps of pinks that have long since done duty, dahlias, roses, sunflowers, pentstemons, *helichrysums* and many other flowers suitable for such an old world garden.

The walls are creeper-clad in great variety and here and there are numerous trees and shrubs, hollies, box,

yews in variety, various well-known coniferi and others. At unexpected corners are quiet nooks provided with seats, arbors still decked with green, while along the numerous paths are arches at intervals over which tumble in rich profusion clematis and *Cobaea scandens*. In a few days more all will be over for frost severe and certain will obliterate every bit of color that is still remaining. But the gardener ever looks forward and while we are lamenting over the past he is providing for the future. Busy hands are planting wall flowers for the coming spring, primroses, bulbs of all kinds and plants that will bloom again when the winter days are o'er. Among the chrysanthemums we see that charming little floral gem, Mlle. Elise Dordan, a perfect little ball-like pompon of pale pink. *Chromatella*, *Roi des Precoces*, a neat little crimson colored Japanese. *Gustave Wernig*, *Mme. E. Lefort*, *Mme. Marie Masse*, one of the best outdoor kinds; *President*, *Cedo Milli*, *Ruby King*, *Wm. Westlake*, a very neat, pretty yellow pompon; *Lemon Queen*, *Mme. Pecoul*, *Julie Lagravere*, *Anastasia*, etc.

We shake hands with our friend and offer him our thanks and then turn again towards London's dark and busy streets to do our common round, thankful that in this great desert there is such an oasis where we can rest for a few moments and take refreshment that must be helpful to many others beside ourselves.

Chasman Payne

Garden Hybrids

Fifty years ago or so the plant breeder was looked upon as an irreverent meddler with nature, and even botanists complained that hybridizing experiments would only lead to confusion by upsetting the natural sequence of created things. Today all this feeling has changed, and botanists generally welcome the results of hybridism or cross-breeding recognizing that man is only carrying out Nature's own methods under cultivation in the garden. Herbert and Darwin of the past, and De Vries of today have shown us that hybridism, once the stone rejected of the builders, has now become the head of the corner. The enormous influx of hybrid orchids and of other garden plants, that is now taking place both in America and in the European continent, has done much to awaken public interest in garden hybrids of all kinds. For many years the records of progress in hybridizing distinct species or in cross-breeding of carefully selected varieties was confined to the horticultural press; but now-a-days we read in newspapers and magazines of the wonderful doings of Luther Burbank and others, and there seems some danger that popular information will get ahead of the real results. The much talked of plumcot, for example—the result of crossing a plum with an apricot—is a fact, but as a new fruit we have still to learn whether

it is any improvement on the best plum or the best of ordinary apricots.

There is too much exaggeration going on today in the case of new productions, be they fruit, flowers or vegetables, as witness the so-called seedless and coreless apple which upon investigation as to its origin recently made by the Agricultural Department at Washington has been found to date back for something like 2000 years. After all, the practical results of cultivation, selection, and hybridism, and cross-breeding are wonderful enough without any booming or exaggeration whatever. And yet the processes of improvement in the garden, so far as the crossing of species is concerned, are often experiments conducted in a rough and ready way. Of course, this is better than not experimenting at all, but certainly not enough for the realization of the best results. If a chemist, or even a cook, were to attempt the blending of drugs or materials of which they knew little or nothing by prior experiments or previous teaching, we should probably suffer from their compounds; but the majority of hybridizers often attempt the rearing of plants from parent species that are practically unknown to them.

It must strike any ordinary observer that before we can ever know the true effect that one species may exert upon another, it is necessary to know the natural amount of variation of both the species used. Thus, before hybridization is resorted to we should grow both the parent species selected from their own seed, so as to observe their character and the amount of their variation. Unless this is done, we are working in the dark, and are pretty sure to confound the effects of hybridism with what is simply natural or seminal variation.

There are in cultivation in gardens today plants like the Chinese primula, the Persian cyclamen and other flowers that, so far as is known, have never been hybridized with other species. They are simply cross-bred selections from one species instead of from two, and still they vary even more than do many hybrids between two species. It would appear, then, that it is only reasonable to experiment and find out as far as possible the range of variety in each of the two parents before we can confidently speak of their offspring as being the result of the union effected. As shown by examples like the Chinese primrose, etc., some species possess an infinite and inherent capacity for variation, apart altogether from hybridism in its true sense, while on the other hand, there are some species that practically never vary until hybridized with others.

So far as individuals are concerned, one can scarcely blame them for taking a short cut, since our days are too short for one man to obtain many results in his own lifetime. This is why the work is best done under Government supervision. The individual matters but little in a State Department, where work is organized, and can be carried as long as it is necessary. The tendency, again, of individuals is to do not what is best in an ideal manner, but what is likely to prove most profitable and this last is a contingency that a Government institution can afford to disregard. So far, without a doubt, the best results of hybridism have been obtained in private gardens, and this, too, thanks to no help from Government.

A. R. Gilbert

A New Year's Reverie

The efforts we make for any worthy object may not seem successful today or tomorrow, but they are a part of the grand work that is going on slowly but surely and no one of them can we afford to lose.

The year of 1905 has been a remarkable one in many respects in Boston, but what I have noticed most is that there has been a great drawing together of the different lines in the florist business and its allied trades. How it has been attained I am not in a position to say, but it is plain to any casual observer.

This is as it should be. The florists as a class are a genial and a happy lot of men who congregate together. The private gardener and the florist have become better acquainted with one another and are imparting knowledge each to the other, and coming together as never before; a little leaven has been put in which is leavening the whole lump. A good work has been started and with the New Year let us resolve to help it along. The millennium has not come yet, but we can by individual effort bring about something nearly as good. Grasp a brother by the hand, and give him a hand clasp, not the dudelet or society shake, but do it so that he will know that heart and hand are one.

"That man to man the world o'er
Shall brothers be for a' that."

That editorial entitled "The highest bidder," in last week's HORTICULTURE should be committed to memory by all growers and filed away for ready reference. The wholesaler who has the growers' interest at heart generally has to use great judgment in allotting flowers in times of scarcity, and it is the man who has stood by the wholesaler and bought heavy in dull times who should get the cream of the product at a fair price. The man, who, in times of stagnation (trying to lower winter prices) shows a letter from parties who perhaps are trying to unload goods by offering a winter scale of prices which the wholesaler knows his growers would not stand for, and in his judgment refuses to meet—this is the man who, having perhaps got left on his cheap contract, comes to the wholesaler at Christmas and invoked his aid, forgetting about his bunco game some months previous. This is the man that should be made to pay and that to the limit. I am glad HORTICULTURE took the stand it did, for it will help to clear the air, cement more firmly the relations between wholesaler and grower, and give a lesson to the buyer that in times of peace he should prepare for war.

Robert Ward

Our Frontispiece

Our frontispiece this week shows one of four large houses of Carnation Robert Craig as growing at the present time at Cottage Gardens where this phenomenal scarlet variety originated. Nothing more luxuriant in growth and habit can be imagined. Mr. Ward informs us that from September to November last the average product per plant was from three to seven flowers. It will be seen in all its glory at the Boston meeting.

Cocos Weddelliana

This well-known palm is a universal favorite and were it an easier subject to grow its position as a serviceable table plant would be in the front rank. How rarely one sees it in perfect condition! On the continent of Europe and especially in Belgium they are specially successful with it. Most people avoid the risks of home production and the risk also of overstocking in either case. With imported plants the tips soon go bad, leaves assume a lighter cast and growth is stunted, making the plants a ready prey to scale, quickly spoiling their symmetrical beauty. Most of HORTICULTURE's readers have doubtless had painful experience. The cause is not wholly climatic, but often for want of special treatment and suitable accommodation not always at disposal. There can be no question that this species requires a warmer temperature than most other marketable palms and should never drop less than 65 degrees at night the year round. Overpotting as well as overwatering are frequent causes of failure. The experiment suggested, and it is a tried one, is to keep the plants on the dry side in a desert-like atmosphere and especially avoiding moisture on the foliage, coupling with this equality of temperature as nearly as can be maintained; if a whole house can be devoted so much the better, but if not, a section should be marked off for culture on these lines. A heavy shade is necessary but a roller blind is preferable to that of a permanent character. The strong heat required is favorable to attacks of red spider and scale but as a general rule vigorous, healthy stock are immune. Sulphur applied with syringe is the best remedy, being preventive as well as a cure.

Immense quantities of seeds are annually exported from Brazil and usually a good percentage are of sound quality. Seed should be soaked well in water for twenty-four hours to ease the outer covering of the nut, and long two-inch pots should be used unless large quantities are in demand, when deep pans serve best. One of the causes of failure is the breaking of the seedling tap root in potting, which in nearly all cases is fatal. If in pans they should be potted up early before the tap root is too long, plunging cocoanut-fibre on a warm bottom and kept in small pots until about a foot high when an occasional watering with soot and weak liquid cow-manure is helpful, though generally this palm abhors too much feeding. As potting compost use leaf-mould and peat in equal parts with a little loam and plenty of sand, not ramming too hard or keeping the base too deep. The persistent ill-luck with this general favorite is a challenge to the grower, the winning of which may not only be a personal satisfaction but will give a lift to the reputation of this plant as a suitable subject for table or house decoration, for after all a fairly warm room with its dry air is really not against its maintenance in health and freshness for many months though of course it cannot be expected under house conditions that this beautiful palm will remain a joy forever.

Edgar Elvire

Fruit Trees in Pots

The practice of growing fruits in pots is not likely to appeal very strongly to our growers. Our atmospheric conditions are such that many of the artificial devices practiced by our English and French brothers in their less congenial climate can be done away with as superfluous here. However, there are certain advantages that may be gained which all would do well to consider. It is a quick and satisfactory method for testing new fruits, especially peaches, nectarines, apricots, and plums. Pears and apples, being hardier, have so wide a range that such culture would be of little advantage, except in special localities, but for tender fruits it is an easy and convenient means of quick testing.

The pot-grown trees will produce earlier fruit or a winter crop by judicial forcing under glass.

But the greatest benefit undoubtedly is to the tenant or to the owner of a limited area. So many of our people hire their homes, rather than own them, that the population is constantly shifting. It has been estimated that the tenant class shifts about once in five years. Hence a person with pot grown trees is independent of the landlord, for as often as he moves he can take his orchard with him.

Lastly, the man with a desire to raise something a little different from his neighbors will find plenty of opportunity in this field.

The soil for the trees is a mixture of three parts sandy loam and one part rotted manure. The trees are chosen when one year old in the nursery and potted in March or April. Nine-inch pots will be sufficiently large at first, later shifting in to thirteens. Pound the soil in firmly around the roots. After potting cut back to three or four buds, and as the new shoots grow pinch back constantly to keep the whole tree compact in shape and to cause the formation of numerous fruit buds. The first season's growth in the pots takes place out of doors. It is a good idea to plunge the pots and to let the roots grow down through the drainage holes to protect the tree if the pots become dry, something that should be guarded against.

On approach of cold weather the pots are raised and replunged in a shed or cold frame where they will get moderate and uniform freezing. After a short rest they may be brought in, gradually started, and forced at any time; or else they may be left intact until the following spring.

The second year cut back the growth one-half and continue to preserve the symmetry of the tree.

As the trees are gross feeders plenty of fertilizer must be supplied, the best being fresh wood ashes, while liquid manure is good. It is a good plan to renew the old soil around the roots often.

The trees should be occasionally syringed, and the various insect and fungus pests kept in submission.

R. L. ADAMS.

A Practical Help

We hope you will like HORTICULTURE and recommend it to your friends in the trade. We want to see on the list of subscribers every one identified with any horticultural industry. We draw no lines, but *invite you all* to help by your subscriptions, your contributions, and your approving words to make HORTICULTURE the best known and the best liked professional journal in our country. Every \$1.00 subscription sent in is a practical help to this end.

Optimistic violet growers

A good indication that the violet men are not yet dismayed by the reduced market value of their product is found in the statement that a joint order for enough glass to construct 2000 running feet of greenhouses has recently been placed in Pittsburg by the Rhinebeck violet growers.

Protection for tender plants in transit

So great is the danger and so frequent the cases of loss at this season in the shipment of azaleas and other plants susceptible to cold, even by express, that no grower can afford to assume any responsibility as to their safe arrival. Possibly the time may yet come when the extent and importance of the plant nursery trade may warrant the providing of cars slightly warmed and otherwise specially equipped for this business on regular routes. The inauguration of such a service would mean a big increase in shipments.

The value of local exhibitions

The proposal of the Toledo Florists' Club to hold quarterly exhibitions as noted in our columns of last week discloses the right spirit and if duly carried out will prove a strong factor in the popularity and prosperity of the organization. It is impossible to realize the indirect advantage to every flower and plant dealer in a community that may be derived from a series of well-managed free public exhibitions. It is essential to keep out everything tending to individual aggrandizement, keeping the club idea strictly in the foreground and relying solely on the common benefit to come from an awakened public interest in the florist and his wares.

Intrinsic value of the modern carnation

While we deprecate sudden and violent advances in prices of staple flowers as detrimental to the flower growers' industry yet we cannot but note with gratification the better values obtained for carnations of the choice grades during the last three weeks. From its

lowly antecedents, the public has persisted in regarding the carnation as a "common" flower, notwithstanding the \$30,000 and \$40,000 trumpeting, and are slow to realize the intrinsic value that the fancy flower of today represents and it may be added that a large proportion of the florists themselves are as obtuse as the general public in this respect. The market value of the carnation as a cut flower has not kept pace with the increased cost of production and if it were not for the revenue from the sale of young plants some growers would soon come to a keen realization of the fact that the average wholesale price of the better grades is entirely too low. With a fifty per cent. advance in price the year through the buyers would still be getting good value for their money and the growers a very moderate return for the expert culture demanded.

Of interest to the nursery trade

Parties receiving shipments of nursery stock at this season of the year should make prompt and thorough examination of the plants and if it appears that they have suffered injury from exposure take immediate steps to ascertain the exact cause. Stock dug early in the season or in sections where the climate is mild, while the wood is in unripe condition and the roots active, is liable to be ruined by a few days of freezing, whereas the same varieties, in dormant condition and well-hardened off, might go through a long period of extreme cold without much injury. This is especially true as regards roses. These lines are suggested by controversies and litigation over some Crimson Rambler shipments a year or two ago in which several nursery firms are involved. The roots of the roses are said to have been dead at time of delivery and the divergent views of shipper and receivers as to responsibility have engendered enmities as deplorable as the direct pecuniary loss. The time, money and worry expended in adjusting these unfortunate affairs, which are repeatedly coming up, might better be devoted to a broad-spirited consideration of ways and means whereby their recurrence may be prevented.

Improving packing methods; settling disputes

Nothing should be left undone which will tend to promote the best interests of the American ornamental nursery trade, the prospects for which are so promising in the light of the reviving popular regard for decorative garden shrubbery. The facilities for the production of high-class material are unexcelled and the country is ready to accord its support but so long as difficulties such as we have commented on in the preceding paragraph are possible the nursery trade is not rising to its opportunity. While our home concerns are wrangling over these grievances our cousins across the water find no difficulty in delivering roses and other material that come out in good condition after a trans-Atlantic voyage and sometimes a week's sojourn in the custom house, simply by puddling the roots in a thick clay mixture. On the continent, instead of resorting to legal means to obtain redress for real or fancied wrongs, dealers have established systems of adjudication by means of mutually acceptable arbitrators and the cost and the enmities of litigation are thus avoided. Can we not learn something to our advantage from these facts?

AFTER ADJOURNMENT.

Have you forgotten that subscription?

Keep your eye on the "New Offers" each week.

We congratulate the florist trade of the entire country on the Christmas spurt. It was magnificent. Keep it up.

The date for the carnation meeting at Boston is Jan. 24 and 25. It promises to be the biggest on record. The exhibition will be unprecedentedly fine. You can't afford to stay away. And the larger the crowd the better, says Boston as she hangs out the latch string.

NEWS NOTES.

A slight fire in the greenhouse of R. O. Cheney, Sr., South Manchester, Conn., caused the loss of many of the plants by water and exposure on Christmas night.

The John H. Caverly residence and greenhouse plant in Chelmsford, Mass., have been purchased by A. Sturges of Boston for investment. There are 23,000 feet of land; the greenhouse is 18x120.

The Boston park commissioners have been notified by William H. Fairbank, executive commissioner for Massachusetts, that the Boston Park Exhibit was awarded a gold medal at the Lewis and Clark Centennial Exposition at Portland, Ore.

A fine new conservatory has just been completed by the Burnham-Hitchings-Pierson Company at West Manchester, Mass. The gardener in charge is Eric Wetterlow, who made an excellent record with D. F. Roy at Malden, Mass., before assuming charge of this Lester Leland estate.

Fire broke out in the boiler room of the greenhouses of J. N. Champion, Ellsworth avenue, New Haven, Conn., on Saturday evening, Dec. 30. The shed and an adjoining greenhouse were destroyed, and the contents of the other greenhouses were damaged to a considerable extent. The loss is estimated at \$5000. There was no insurance on the property. Two valuable dogs were also lost in the conflagration.

The Mt. Tom reservation commissioners of Holyoke, Mass., have decided to take, under the right of eminent domain, the 225 acres on the mountain needed for a park. This, with a few acres on the west side which they anticipate can be purchased without condemnation, comprise all the land required for park purposes. The commissioners asked for an appropriation of \$20,000 from the last legislature and received half this amount. This, it is anticipated, will be sufficient to pay for the land now taken.

OBITUARY.

Thomas C. Mellen of Weymouth, Mass., aged 80, passed away on Sunday, Dec. 24, after a long illness.

Col. M. V. B. Chase, for many years a member of the firm of Chase Bros., nurserymen, Rochester, N. Y., died at the Augusta House, Augusta, Me., on Dec. 29 of pneumonia.

William Henry Washburn of Foxboro, Mass., died suddenly on Dec. 27, aged 67. Mr. Washburn has supplied flowers to the Boston market for many years. He leaves a wife, two daughters and a son.

Louis Lang, Sr., of Buffalo, N. Y., died at his home, 271 North Division street, on Dec. 26. Mr. Lang came to this country from Wurtemberg, Germany, 45 years ago, and opened a florist's store at 250 Division street, where he has conducted a successful business for nearly thirty years. Mr. Lang is survived by his widow, two daughters and two sons.

CALIFORNIA NOTES.

As the result of a destroying blight the crop of potatoes and other vegetables in New Zealand and Australia was almost a total failure, and as the colonials must have these products the loss of the Antipodean farmers is a gain for the California growers. The last steamer out for New Zealand and Australia carried a cargo composed largely of the products of California soil. There were 6600 sacks and 3000 crates of potatoes, 7500 boxes of apples, 5000 boxes of oranges and 875 boxes of lemons, also tons of dried and canned fruits.

The planting of trees on the military reservations about San Francisco harbor is in progress. For the department rifle range at Point Bonita 750 evergreens, 1000 eucalypti and 600 shade trees have been shipped. The forester at the Presidio is having experienced civilian employees digging up young seedlings and shoots in the wooded area of posts for shipment to other reservations. Squads of enlisted men from Fort McDowell will be sent to work under the direction of the forester in planting these and other trees that will be shipped from the nursery at the Presidio, on the reserve at Fort Baker.

BUSINESS CHANGES.

Salveson & Co. is the name of a new firm doing business at 426 E. Monroe St., Springfield, Ill.

K. E. Balcom has taken a half interest in the business of Edwin S. Corey at Northboro, Mass., and hereafter the firm name will be Balcom & Corey.

The firm of A. Leuthy & Co., Roslindale, Mass., has been dissolved by mutual consent, and the business will hereafter be conducted by Mr. A. Leuthy, Mr. D. Lumsden retiring.

A CORRECTION.

Some errors in price quotations as given in advertisement of Bobbink & Atkins last week are corrected, and appear in this issue as originally intended.

WHOLESOME CHESTNUTS.

Prune and tie in peaches and nectarines.

Anything that requires bottom heat to root will better be put in now, when that agency is most active.

Put in all the colens cuttings you can get from the stock plants; if any have mealy bug on them throw them away.

Wash all the pots and count them after they are washed to see how many will be needed; don't wait until potting time to order the pots needed.

Have you seen Nephrolepis Whitemani? If not, you have still something worth while to see. It will be given to the public in about eight weeks.

If you have anything that is new and good, don't be backward in advertising that fact. It is not at all likely that people will advertise to pull the fact out of you.

Several odd things in seeds may be sown now to advantage, such as antirrhinums, cauliflower, celery, hollyhocks, begonias, asparagus plumosus nanus and Sprengeri.

What a gorgeous display can be had from plants of Nicotiana Sanderae in the new colors along with the red of last year; a display that will be uninterruptedly continued at a cost within the reach of all.

Don't belittle what your neighbor may have in the false hope that this will make yours appear any better. Leave the other fellow to mind his own business, and most likely he will be heard from in due season, if he is well.

Look over every palm, and if scale or mealy bug is visible use soap and sponge. If you are determined to wield a brush in the performance of the work, do so with care, remembering that the fronds or leaves are not hard wood boards.

Gardenia plants should be in three-inch pots before being planted in the bench; if these are wanted to bloom early in the summer, the sooner they are in benches the better. Don't plant them very close together, and don't make the soil too rich, for if they are planted close to one another they will get almost matted before summer, and if the soil is too rich they will likely go on growing and never think of blooming.

PERSONAL.

H. Leroy Sawyer of Clinton, Mass., left on Monday, Jan. 1, to take a position in Jacksonville, Fla.

S. B. Parsons, Sr., the eminent nurseryman, is nearing his end at his home in Flushing, N. Y. He is 87 years of age.

Among the women who have made a success of floriculture is Mrs. H. E. Smith of Berlin, N. H. Starting in a small way some thirteen years ago, she now has about 5000 square feet of glass. Two years ago, Thomas Gill, who had previously been in her employ, became a partner in the business, and the firm name is now H. E. Smith & Co.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN CARNATION SOCIETY.

The fifteenth annual meeting and exhibition of this society will be held in Horticultural Hall, corner of Huntington and Massachusetts avenues, Boston, Mass., Jan. 24 and 25, 1906.

Address all exhibits to William P. Rich, secretary, Horticultural Hall, Boston, Mass.

Express charges on all exhibits must be prepaid.

Special tables will be provided for exhibits not intended for competition.

All entries must be forwarded so as to reach the secretary, Albert M. Herr, Lancaster, Pa., not later than Wednesday, Jan. 17. Exhibitors from a distance will please note the date and mail accordingly, as a charge of \$1 for each variety entered will be made for those not entered as above requested.

For exhibits other than carnations arrangements must be made with Wm. P. Rich, secretary, as per above address.

The society provides vases of uniform size for exhibitors' use respectively for 100, 50 and 25 blooms. It is obligatory upon exhibitors to use these vases in classes A, B and C, and for all entries for certificates of merit. In all other classes exhibitors have the option of using the society's vases or providing their own, as they may elect.

The premiums up to Class E, inclusive, are the same as those of last year. The new classes are as follows:

Class F—Best general display of Commercial Carnations. No restrictions as to color—but variety must have been disseminated prior to April 1, 1905; 50 blooms to be shown to a vase, and display is not to exceed twenty varieties. Vases from this collection are not allowed to compete in any of the other classes. First prize, \$50; second prize, \$30; third prize, \$20.

Class G—A. H. Hews & Co., Inc., silver cup valued at \$25 for the best collection of carnations, 4 varieties, 25 blooms of each, to be shown in separate vases—either seedlings or named sorts and no restrictions as to color.

Class H—Thomas F. Galvin, silver cup to value of \$25 for 8 varieties of carnations, 25 blooms to a vase.

Class I—W. W. Rawson & Co., silver cup valued at \$25 for 3 varieties of carnations, 50 blooms to a vase.

Class J—R. & J. Farquhar & Co., silver cup valued at \$25 for the best 12 blooms of one variety. Open to private gardeners only.

Class K—Schlegel & Fottler Co., \$15 for the best vase of 100 blooms dark pink carnations.

Class L—Wm. Nicholson, \$10 for the best vase 50 blooms dark pink carnations.

Class M—Patten & Co., \$10 for the best vase 100 blooms variegated carnation, Mrs. M. A. Patten type.

Class N—The Gardeners' and Florists' Club of Boston, two prizes, 1st, \$15; 2d, \$10, open to private gardeners only. For best three vases of three varieties, 25 blooms to each vase.

Papers will be read at the meeting as follows:

Carnations From a Retailer's Point of View, by Thomas F. Galvin, Boston, Mass.

Carnation Breeding, by Prof. H. F. Hall, Durham College, N. H.

Carnations in the Rocky Mountains, by J. A. Valentine, Denver, Col.

The complete official schedule of premiums, rules and regulations has been issued and copies may be had on application to the secretary, A. M. Herr, Lancaster, Pa.

The usual excursion rate of one and one-third fare on the certificate plan has been extended by the railroads. When purchasing ticket to Boston ask the ticket agent for a certificate for attendance at the meeting of the American Carnation Society, Jan. 24 and 25, 1906.

WORCESTER COUNTY (MASS.) HORTICULTURAL SOCIETY.

The program for the winter meetings is out and among the subjects of importance to be treated by the various speakers are the following: Jan. 4, "Horticulture, Past, Present and Future," O. B. Hadwen; Jan. 11, "Orchard Insect Pests and Modern Methods in Spraying," George T. Powell; Jan. 25, "Ornamental Trees and Shrubs," J. Woodward Manning; Feb. 15, "Herbaceous Plants," Edward W. Breed; Feb. 22, "Vegetables for the Home Garden," J. Lewis Ellsworth. On March 14 and 15 the Massachusetts Fruit Growers' convention will be held and on the latter date Prof. F. A. Waugh will speak on "The Results of Some Experiments in Pruning."

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The meeting held on the evening of Jan. 2 was one of the pleasantest of the season. Possibly the reason for it may be found in the exceptionally good holiday season, in which all the trade shared. There was a variety of exhibits. H. S. Price, gardener for G. M. Laughlin, showed an exceptionally fine strain of Veitch's primulas, and some long-stemmed tulips, which he gets by covering the pots thickly with moss and letting the tulips force their way through. The Pittsburgh Florists' Exchange had a vase of Queen of Edgely roses. The Pittsburgh Cut Flower Co. had an interesting variety of exhibits, including the Mme. Cusin rose, which they prefer to the Bride or Bridesmaid, on account of its freedom of growth and better keeping qualities. A vase of the Bon Silene rose in bud was shown. The attention of the club was called to some very fine sweet peas, but bunched without any foliage, to the detriment of the grower's purse.

Five new members were elected. The nomination of officers for 1906 resulted in the ticket for 1905 being put in the field, with the exception of President Langhans who, to the great regret of the club, absolutely refused to accept a renomination. Jno. W. Jones, foreman of Schenley Park conservatories, received the nomination for president.

Carnations will be the subject of the February meeting of the club.

H. P. JOSLIN.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next meeting of the club will be held on Jan. 16, at Horticultural Hall. The newly elected officers will be installed, and will make addresses. Messrs. M. A. Patten, William Nicholson and Peter Fisher will, it is expected, speak on the carnations of the past, present and future, respectively. A number of new varieties will be on exhibition, and there will be other attractive features.

As this meeting just precedes the convention of the American Carnation Society, important matters pertaining to it will be discussed, and a large attendance of members is hoped for.

W. N. CRAIG, Secretary.

CLUB AND SOCIETY NOTES.

The annual ball of the Wholesale Florists' Employees will be held at the Amsterdam Opera House, 344 West 44th street, New York, on Saturday, Jan. 13. The price of tickets is within the reach of all.

On Wednesday, Jan. 10, the gardeners and florists of Madison, N. J., will have their annual smoker. Extraordinary preparations are being made to have this affair beat the record—something not easy to do.

There is a movement on foot to form a horticultural association in Fairfield County, Conn., and all those interested in the same are requested to send their names to Charles W. Neth, Ridgefield, or Frank E. Conine, Stratford, Conn.

PHILADELPHIA NOTES.

George D. Clark of the Henry A. Dreer Company was taken suddenly ill in New York, December 23rd. He has been confined to his home in Philadelphia since, but at last accounts was improving.

Turnford Hall begonia is a pretty flower but it is not a seller like Lorraine. "It will sell in a made-up basket with the pink one" says Edwin Lonsdale. Which is severe from such an optimist.

Euphorbia fulgens (jacquiniaeflora) has been considerably in evidence at the fashionable flower stores this season. There is room for more of this good old favorite. Like the poinsettia it is coming into popularity again.

Mr. Darlington, of the Burpee Seed Farms at Doylestown, Pa., presented his views of "California and its Climate" at the last meeting of the Florists' Club of Philadelphia, Jan. 2. Albert M. Herr of Lancaster, Pa., will give a review of the Boston show at the February meeting. This club intends to post its delinquents on the bulletin board from now on. We had great faith in laws, but are generally "agin" enforcement.

Dear Sirs:—

I find I am short No. 14, Vol. 2, of Horticulture, and would ask you to send me a copy of the same by mail, as I wish my files of this increasingly good horticultural paper complete.—M. J. W.

MOVING A LARGE OAK.

James Garthly, gardener for H. H. Rogers, Fairhaven, Mass., has completed the task of moving a large English oak, for a distance of 100 feet, to a more favorable position upon the lawn.

The operation was performed by digging around and under the tree, placing 12-inch beams under the ball and raising the mass and drawing it to its new position by means of screw jacks and windlass. The tree has a diameter of 27 in., a height of 40 ft., and spread of branches 45 ft.; the estimated weight is fifteen tons.

In lifting the tree it was found that about four feet below the surface of the ground was a bed of granite which cropped up nearly to the surface, about six feet from the trunk of the tree on three sides; while on the fourth side, four feet from the tree was a cemented wall. Thus the root area was circumscribed; for with the exception of eight comparatively small roots which ran out to a distance of thirty feet into the lawn, but which carried no feeders except upon the extreme ends, it appeared that the tree had grown in a basin; and it was lifted with practically no disturbance of its root system. The eight roots spoken of were carefully unearthed, wrapped in hay and hung up in the tree. The weather has been favorable for the operation and the eventual success of the work will be of great interest to all who are interested in arboriculture.

The moving of this fickle tree with the chances of success, brings to mind the subject of the value of *Quercus Robur* as an ornamental tree. When grown as a specimen or lone tree under favorable conditions the sturdy limbs and majestic form of the *Quercus Robur* justify its claim to the title of King of trees.

As an ornamental tree in Massachusetts, it is not without its failings inasmuch as it suffers from the effects of extreme cold weather. The trunk

invariably, and sometimes the larger limbs, split, causing an unsightly suture or protuberance which detracts somewhat from the beauty of the tree. When the thermometer registers near to 10 below zero the cleft in the trunk opens so wide that a stick the thickness of a man's finger may be inserted, and closes with the return of warmer weather. The cleft extends to the heart of the tree rendering it useless as timber.

Some authorities give the probable life of the English oak as fifty years. But if planted upon well-drained soil (for in wet or swampy places it will not do well), we may reasonably hope for better things than this. The tree which Mr. Garthly has moved was grown from one of a number of acorns brought from England by the late Warren Delano, of Fairhaven, in the fall of 1866. A number of seedlings were raised and at 2 or 3 years old were transplanted in their present positions; none of these trees at the present time show signs of deterioration.

Upon a neighboring estate there are a number of English oaks planted by the same Mr. Delano, the planting of which was of an earlier date, as they did not spring from the acorns brought over in 1866. Two or three show evident signs of decay but among them are several fine trees one of which has a diameter of 29 inches and a spread of branches of 65 feet and appears to be in the best of health.

The *Quercus Robur* in this country is a rapid grower and quickly develops a fine shape and if the life of it be only fifty years I think it will compare favorably with many other imported trees; but if we would plant for posterity or would duplicate the veteran oaks of Merrie Sherwood we must rely upon our native oaks.

Thomas White

CATALOGUES RECEIVED.

Elm City Nursery Co., New Haven, Conn.—Trade price list of surplus stock.

Jensen & Dekema, Chicago, send out a folder with price list of rooted-cutting carnations for season of 1905-06.

Boddington's Seeds, Spring 1906, is the title of a very artistic illustrated catalogue received from Arthur T. Boddington, New York City. The cover is a departure and a strikingly good one.

From George E. Dickinson, 1 Broadway, New York, comes the most beautiful calendar of the season. The Children of the Prairie, with selections from Hiawatha, are artistically portrayed in rich colors. It is a gem.

Wm. Elliott & Sons, 201 Fulton street, New York—Annual seed catalogue, 60th issue. Has a handsome colored cover, is full of the cream of seedsmen's stock, and offers a tempting list of flower and vegetable seed novelties.

Joseph Breck & Sons, 47 to 54 North Market street, Boston. Annual descriptive catalogue of high-grade seeds. A comprehensive list, including regular stocks and novelties in flower, vegetable and forage seeds, agricultural implements, bulbs, poultry supplies, fertilizers and everything that horticulturalist or farmer can wish for.

Cottage Gardens Co., Queens, N. Y.—Peony catalogue for fall, 1905. A price-list of the unsurpassed collection under culture at Cottage Gardens, with full cultural directions and advice as to most desirable varieties for all purposes. Also the Cottage Gardens Nursery Book for 1905-06. A very complete list of hardy ornamental trees, shrubs and herbaceous plants.

J. M. Thorburn & Co., New York. One hundred and fifth annual catalogue of high-class seeds. Few houses in this country can point to 104 years of continuous existence and prosperity. The catalogue now sent out is characteristic of this well-known house, sterling from cover to cover. An artistic conventional arrangement of carnations adorns the first cover, and on the other outside is a colored plate of Noroton Beauty Potato.

GREENHOUSES BUILDING AND PROJECTED.

North Woburn, Mass. Adam Foster, one house.

Auburn, Me.—Charles E. Shackley, one house.

Stratford, Conn.—C. D. Mills, addition to house, 70x20.

Manchester, Conn.—John Cheney, one house.

LIST OF PATENTS.

Issued December 26, 1905.

808,464. Fruit Cutter and Pitter. King T. Lynn, Fresno, Cal., assignor of one-half to A. Mocker, San Francisco, Cal.

THE IDEAL COUNTRY HOME FOR THE MAN OF MODEST INCOME

A paper by Oglesby Paul.

Read before the Society of American Florists at Washington Convention.

No doubt many of you will laugh at the title of my paper, "The Ideal Home" and yet seriously how many people have ever thought this subject out and reached a definite idea. Most people I have found are like sheep in their home making, following where others lead, and judging from the evidence at hand the leaders usually wore blinders. Take the average suburban settlement for example, where the properties are an acre or less in extent, and it is of small places only that I shall speak. The houses in such places are usually comfortable and attractive now, thanks to the skill of our architects, and the real estate man may usually be trusted to see that they have all modern improvements of water supply, drainage, lighting, good roads and the like, of the necessities as we call them of modern life. The land, too, has been improved, the roads are shaded by trees and the gardens are neat lawns with here and there a tree or clump of bushes. So far, so good. But after all does this represent the ultimate perfection of home making? The houses are vastly more home-like and interesting than those of thirty years ago, almost as homelike as those of our grandfathers' day some malicious critic would say, but the gardens are still woefully bare and dull. Think of what one can do with a half acre, what a paradise some half acres are, yes, and what paradises they so often were in our grandfathers' day, and then wonder at the bare half acres you see today. Surely the house and grounds together make the home, and the grounds even more than the house should reflect the personality of the owner. Study and the mental picturing of your grounds as you would have them look will alone make this possible. And then remember that planting, and once again planting, is the secret of success. How many handsome houses do you see in a day on lots bare of individuality and interest, dotted with a few trees and scattered bushes which might be made beautiful by intelligent planting. The passerby on the highway can run his eye over the entire estate and take in at a glance everything save possibly the kitchen door in the rear. What privacy is there left in such a home?

The plot we will assume is rectangular, without features of any sort and nearly level. The house faces west towards the street and stands some fifty feet back from it. To mark the separation from the street we will carry a hedge of privet across the front, and lead a walk directly to the front door from the street. By screen plantings of bushes from the corners of the house we will cut off the rest of the place from the public eye which must be content with a view of our front yard and no more, this much we concede to the general good. (And here I know there are some who will say I am conceding too much and should shut the public out altogether with a high wall; however, walls whether good or bad cost money that we need for more important things). Either side of my walk I would have a little lawn and back of it next the margins irregular enclosing borders of shrubs. Stout coarse growers are not

wanted or they will so outgrow our space, but there is wealth of material at hand for our purposes. In the corners where height is needed might be forsythias, those golden glories of the spring, preferably only Forsythia Fortunei and suspensa, as viridissima is too coarse and Sieboldi differs but little from Fortunei. Of the viburnums we can find room for plicatum (the Japanese Snowball) and opulus (the single type), the old bush cranberry of our grandfathers. The weigela, especially the newer varieties such as Eva Rathke may find a place, as also of the bush Lonicera tartarica and bella candida, charming for their bright fruits in July, and fragrantissima for its perfumed flowers in early spring. As lower growers with these would be the lavish tribe of Rosaceae, Spiraea Thunbergii or arguta, the bridal wreaths most lovely of spring-flowering bushes, with the more vigorous Spiraea Van Houttei for later bloom and perhaps in a pocket in front of the border the dwarf Spiraea Anthony Waterer and Spiraea salicifolia. Rosa rugosa alba and Mme. Bruant deserve a place, and if we can get it, the new rugosa alba repens. The list of roses should include our native Rosa lucida, Mr. Dawson's new lucida alba, Rosa nitida, that hedge of thorns, Rosa Caroliniana, the tall swamp rose, and Rosa setigera, the wild July blooming rose of the prairies. Ribes sanguinea and aureum, the red and yellow currants, Rubus deliciosus and Exochorda grandiflora (the pearl bush) are worthy of places. The old-fashioned Spiraea prunifolia with its wealth of double white flowers invaluable for cutting will delight you if tucked in behind some such spreading grower as the dwarf privet (Ligustrum Regelianum) to soften the effect of its stiff habit of growth. The althea, its companion in old door yards should be included, especially the red and white varieties as they occupy little space and bloom in midsummer when few shrubs are in flower. Of dwarf spreading bushes for the foregrounds of these borders we have Berberis Thunbergii, Ligustrum Regelianum and media, the latter a seldom planted but valuable form of ovalifolium of dwarf growth and an abundant bloomer, Hydrangea paniculata grandiflora and quercifolia (interesting in its semi-prostrate habit, handsome leaves and graceful heads of flowers). A corner, too, may be found for the climbing hydrangea, Schizophragma hydrangeoides, and where it can be trained over the side of the building there are few plants more handsome. Then where we wish to bring the shrubbery down to the grass line without that harsh margin common along shrub beds we have a charming plant of low stature. Deutzia gracilis and Lemoinei, Hypericum aureum, prolificum and Moserianum, Xanthorrhiza apiifolia, Euonymus obovatus and many more. Still further to break up the stiffness of the bush forms a plant of bittersweet, Celastrus scandens or the Japanese Celastrus articulata, and Lonicera Halleana are invaluable rambling over the ground or mounting on the nearest bush, every breeze sweeping their graceful outstretched tendrils to and fro in the air. In the grass near the walk there is space for a small flowering tree or two such as the double scarlet thorn, Crataegus oxycantha rubra fl. pl.,

the English thorn, C. oxycantha, the white thorn of Milton, the golden shower tree (Laburnum), the pink dogwood, Cornus Florida rubra or the like. For detail in the shrubberies there is an array of interesting seldom-grown bushes for some of which we can find space. Styax Japonica, Symplocos crataegoides (a hardy bush, bearing bottle-brush white flowers), Caryopteris mastacantha (the blue spiraea of the trade list), Pyrus Japonica for its cheerful red blossoms so early in the season, Prunus amygdalis, the flowering almond, Rhodotyus kerrioides for its neat habit, clear white flowers and black fruits, and Kerria Japonica, preferably the old single form, as its growth is better and flower more graceful.

Now let us pass from the front doorway through the screen planting into the wild garden which lies on the south side of the house, shut out from the public gaze by those screening bushes. It will be simply treated, consisting of masses of wild flowers and rock loving plants through which we pass by a trail that divides into two winding walks. The grading would be that of a little vale, the ground rising at the sides, forming slopes which are to be clothed with the rambling, sprawling bushes and plants found in the wild spots such as the brambles, Rubus odoratus, incisus and dumetorum, struggling down between taller lycium, symphoricarpos and sambucus. The back ground would be of such things as Rosa multiflora and canina, Cephalanthus occidentalis (the button bush of our Northern swamps which vies with the sambucus and clethra to make glorious the bogs in midsummer). The feathery Tamarix, Eleagnus multiflora, Berberis aquifolium, Andromeda speciosa, Fendlera rupicola, Robinia hispida, Rosa spinosissima and many others, and on the irregular sloping foreground tufted masses of heather, Erica vulgaris, Iberis sempervirens and Tenoreana, Daphne cneorum, junipers of various kinds from the creeping prostrate and sabina to the upright japonica, sinensis and virginica, yuccas, Azalea amoena, Spiraea ulmaria, palmata, tomentosa and aruncus, carpeting the ground in the inter spaces with Euonymus radicans, Lathyrus latifolius, the everlasting pea, broken by tufts of Armeria maritima, Orobis vernus, Arabis alpina, Alyssum saxatile, Aquilegia canadensis, Oenothera Youngii, biennis, the white flowered speciosa and the aster-like O. Miscariensis.

The walks might be of soil and leaves, pine needles or tan bark and as a grass edging would be stiff and wasteful of room as well, carpets of moneywort-Lysimachia nummularia will form a delightful irregular margin and when in bloom is covered with its yellow flowers. By sinking an old hog's head in one corner and making an occasional use of the hose we have the ground work of a water garden where Nymphaeas may bloom amid iris, myosotis, mallow (Malva moscheutos), and lythrum with a backing of the water side cephalanthus, clethra and arundo.

From the wild garden by an entrance arched with clematis and wistaria we pass into the flower garden occupying the rear or eastern portion of the lot. Here all is formal. A neat hedge of privet encloses it and the space within

is laid out in straight walks and rectangular beds filled with flowers. Here the old-fashioned hollyhocks, digitalis, delphiniums, tiger lilies, iris, roses, peonies and phloxes reign supreme, as they have for centuries in such gardens before us. The new and improved forms of each let us have by all means, especially in the phloxes, where the stride both in purity of tone and size of flower is amazing. Let us also have roses in abundance, hybrid perpetuals, hardy teas and hybrid ramblers, the latter best grown with some support. Harrison's yellow is an especial favorite of all rose lovers. The spaces left we can fill with such plants as the poppies of many sorts, perennial and annual. For blues we will have *Baptisia australis*, distressingly short-lived though its lilac flowers be, *Iris germanica* and *siberica*, the latter most decorative of irises when well-grown, though *Iris Kaempferi* flowers excel it in size and depth of coloring; *Campanula grandiflora*, *rotundifolia* and *persicifolia*, *Aquilegia coerulea*, *Veronica longifolia subsessilis*, hardy asters and *Stokesia cyanea*. In pinks and whites are *dianthus* group, *D. arenarius*, *barbatus* and *deltoides*, *Lychnis viscaria* fl. pl. *Pyrethrum hybrid* and *uliginosum*, *Achillea ptarmica*, the Pearl, *liatris* and *Sedum spectabile*. For yellows there is an abundance to choose from in the composite family alone, beginning with the early flowering *Doronicum excelsum* and the coreopsis, and ranging through *Rudbeckias hirta*, *laciniata* fl. pl. (Golden Glow), and *speciosa*, and ending with *Helenium pumilum* and *Helianthus Maximilianus* and *orgyalis*. *Aquilegia*, the California hybrids of the yellow *A. chrysantha*, also deserve a place, and I have not even touched on the wide field of annual flowers and tender plants which are the life of a garden. Arbors and trellises against the house will give space for growing wisterias, climbing roses, actinidias and other vines, and if there be a board fence along the back of the lot it may be made beautiful with clematis in many sorts, the rambling yellow *Jasminum nudiflorum*, one of the spring's pioneers, briar roses, annual cobaea and the grand old passion flower *Passiflora coerulea*. But let us pass through to the fourth or north side of the house which if the building be well located will be but a narrow strip of land twenty-five or thirty feet wide. Through it the walk to the kitchen door should run the space being least valuable here. That leaves room enough still for two shady borders in which to plant shade-loving shrubs, flowers and ferns. Of bushes there are the native *Symphoricarpos vulgaris* and *racemosus*, of value chiefly for their pink and white berries, the latter *S. racemosus* was the wax berry of colonial days. For brightness of flower there is nothing to equal the azalea which will do nicely in such location, and *Azalea nudiflora*, the common wild pink azalea of our woods, is as charming as any. These azaleas may be effectively grouped and grown to best advantage when planted among evergreens whose foliage will hide the bare shanks of the azalea which, like the Sultan of Sulu whose costume was limited to a stove pipe hat and a red cravat, have all their beauty on top. In the foreground would be the low grown forms, the lovely pink *A. Vaseyi*, just the shade

of the old Daybreak carnation, the darker *Azalea nudiflora* and the large flowered Ghent and Mollis hybrids, shades of orange and yellow chiefly. Behind them the taller *A. arborescens*, *viscosum* and *calendulacea*, the latter the flame azalea of the Southern mountains. Space, too, there is for the pretty lavender *Rhodora canadensis*, a close kin botanically to the azalea. For evergreen plants to associate with them there are our native *Rhododendron maximum* and *Catawbiense*, quite cheaply obtained and both very beautiful. So, too, of the native *Kalmia latifolia*. For variety a few plants of the dearer hybrids are worth trying if your purse can afford it, though they are thankless fellows, apt to repay your greatest pains by succumbing to the first cold winter. More satisfactory are the *Andromeda japonica* and *floribunda*, especially the former which is far too seldom grown. *Leucothoe Catesbei*, a low spreading bush with leathery leaves and racemes of white flowers, is charming and easily handled as is also *Ilex crenata*, the Japanese holly. Conifers we do not need as the space is insufficient for their proper development and they succumb so often to the dust and soot of the suburbs. Here and there we would tuck in clumps of ferns, tall *Osmunda cinnamomia*, *Claytonia* and *regalis* in the dampest places, the hay-scented *Dicksonia* and graceful bracken (*Pteris aquilina*) where the sunshine enters most often, and under the cover of some bushes the evergreen Christmas fern (*Aspidium acrostichoides*), the fragile *botrychium* and the beech fern (*Pneopteris hexagonoptera*). No bare ground should be seen but in its place mats of English ivy, ground gill (*Nepeta glechoma*), *Rosa Wichuraiana*, and *vincas*, their flatness broken by taller clumps of Solomon seal (*Polygonatum biflorum*), trilliums, *Scilla bifolia*, primulas, *uvularias* (the wood lily), the woodland golden rod and aster (*Solidago caesium* and *Aster multiflorus*), lilies of the valley and other flowers of our own or European forests. Such an half acre is by no means an impossible dream, nor is there fear that it will look cramped and crowded for we have carried the division of the house into rooms out into the garden. And it need not cost a fortune in the making if the owner will go systematically about it and use his opportunities. The soil, of course, must be well prepared by deep digging and be well enriched. Many hours must be spent in gathering and establishing the plants, whether they be bought in nurseries or collected in the woods and fields. But after all, many a man spends almost as much money on a useless stone wall along his property front, a wall too low to screen either from within or without. And will it not be worth while? Not a moment of the year will be without its interest in such a garden home from the first breaking of spring when the bulbocodium is pushing its green nose watching for a warm day to open its pink flowers with their odd strap-like petals, every day in haste to profit by the opening of the season, and not long after the white and lovely violet colored form named after Sir Walter Scott. Meanwhile by the pool our old friend, the skunk-cabbage (*Symplocarpus foetidus*), a sort of stout matronly old party, as it were, who rises be-

times, has been up for some time and no doubt may be in full bloom already, though this is a matter of interest more particularly to the *symplocarpus* itself, as the blossom is quite hidden in the purple green sheath. Then comes a long array of tender little things, bulbous for the most part, headed by the cold blue squill and its companions, the warmer colored *Chionodoxas Lucilliae* and *gigantea*, the "glories of the snow" of our fathers, almost as early are the woodland flowers, the wind and rue anemones (*Anemones nemorosa* and *Thalictrum anemonoides*), together with the bloodroot (*Sanguinaria canadensis*) and the dog-tooth violet (*Erythronium Americanum*). Snowdrops in a bold group in one corner follow, and behind them would be rising the stout stems of the Old Crown Imperial (*Fritillaria imperialis*). This plant is one of the marvels among spring flowers. Like a giant among pygmies, it shoots up in a few weeks and then bursts out into a great head of orange lily-like flowers. No, there is one spring bloomer that is yet more remarkable for its length of stem—the *eremurus*—think of finding in May a newly risen stem five feet high, supporting a spike of snowy flowers nearly a yard stick long. One thinks at once of the magician and his marvelous seed. I always feel like taking off my hat to the *eremurus*. The shrubby things in the door yard begin to be heard from, *spiraea*, *cydonia*, barberry vieing with the narcissus and tulip in the wild garden for our interest and presently the place is a veritable fairy land of life and color from the unfolding leaves of the tiny *Nymphaea pygmaea* in the pool to the nodding trumpets of the *tecoma* mounting skyward on the walls. And so it goes until frost cuts off the lingering flowers of *chrysanthemum*, *geranium*, *dahlia* and aster. Remember, too, I have not exhausted, but just touched upon the field open to him who cares to try my receipt for a garden home.

CINCINNATI HOLIDAY REPORT.

The demand has been quite brisk during the past week, but prices are slowly tending downward. Roses and carnations continue to show an improvement and are well worth the price asked. Green goods are plentiful with the exception of asparagus, especially the Sprengeri. Business for New Year's was fully up to expectations, and all are well pleased with the holiday trade, and the growers have already begun Easter preparations.

That the holiday business this season has surpassed all previous records there can be no doubt. I find that about 10 per cent. increase over last year is a fair estimate. Some report more, some less, but all join in saying that they could have done more had they been able to get the stock wanted. It has been charged that the dealers shipped the bulk of the good stock and that the local buyers were obliged to take what was left or depend on other markets for their supply. To supply the demand for the holidays has long been an unsolved problem, but the solution is apparently easy, for a good salesman has but little difficulty to induce his customers to buy a nicely filled pan or basket of plants instead of a dozen Beauties or a box of cut flowers if the latter are not fresh and good.

THE CHRYSANTHEMUM

Its Culture for Professional Growers and
Amateurs

By Arthur Herrington

The most complete and comprehensive work on the cultivation of the chrysanthemum that has yet been published in America. Its scope and character may be gleaned from the list of contents, which comprises chapters on culture for exhibition; composts; planting; benches, boxes or pots; general culture details; crown and terminal buds; feeding; its object and application; care of the buds; exhibition and judging; specimen plants; chrysanthemum plants in six-inch pots; commercial culture, raising from seed and hybridizing; sports, hardy chrysanthemums; chrysanthemums for south and west; chrysanthemums in Australia; insect pests and diseases; classification and selection of varieties for special purposes; and history of the chrysanthemum. The book will be welcomed both by the professional and amateur growers of chrysanthemums, for the lucid, comprehensive as well as the practical character of its contents, which, if strictly followed, cannot fail to bring about the desired results, namely, the obtaining of large chrysanthemum flowers in the greenhouse, and a profusion of bloom in the garden. Handsomely illustrated. 108 pages. 5x7 inches. Price, 50c.

Requires only ordinary culture and is a fancy in the fullest sense of the word, sold for 25c each at Christmas.

Cut Flower Market Reports.

BOSTON Country and suburban buyers are beginning to find fault with the wholesale prices of flowers, which means that business is slack with them. It is slack in city circles as well, and the receipts of flowers being rather heavy in wholesale markets, accumulations are inevitable, and so the prices must go down, whether it pays or not. There has been no sensational tumble, as was the case last year, but it has already gone below a reasonable level on some things as, for instance, Enchantress carnations, which bring with difficulty anything over \$4 per 100, although the superb stock offered must have cost more than that to produce. In roses, the medium grades are in demand in a ratio of about nine to one as compared with the specials which are represented in the top figures given in our market quotations. The wholesalers made a struggle on New Year's day to hold American Beauty specials at \$75 per 100, but the final result is that \$50 is the outside figure. Boston is not a very elastic market, and it does not take much, after the country trade stops buying, to choke the channels and compel unloading at sacrifice rates.

With ideal spring weather for Christmas, a rushing business was done. Plant trade was exceptionally good, with mild weather for delivery. Stock was a little scarce at the wholesale house at the beginning of the week, but on Friday a good quantity was had, and shipping orders were rapidly filled. Select roses were about

the only scarce article, especially long stem Liberties; as for ordinary and Teas, any amount could be had. Beauties were leaders, and in fairly good demand, with prices ruling high. Violets were held off until the latter part of the week, when they came in large quantities, and a good many were carried over, which were sold far below the list price. Carnations of finest quantities were had, Enchantress, Red Lawson, Flamingo and Cardinal being leaders, and brought good prices. Narcissi, Roman hyacinths and lily of the valley were in good demand. It may be said that shipping trade has been better than for years. All retailers are well satisfied with the amount of business done.

LOUISVILLE Business conditions the previous week were pretty well in keeping with the Christmas rush, which was probably the best ever experienced in Louisville. Carnations have had an unusually good demand, with the quality great, and the supply short. Roses have certainly had their share of popularity. The quality and supply with one or two exceptions are satisfactory. Violets, mignonette and lily of the valley move rapidly and are of good quality, but the supply at times is short. The supply of poinsettias is about over.

NEW YORK After the Christmas sweep a considerable drop in values ensued, but not a severe drop, and prices held together fairly well, the anticipation of New Year's being a factor. This latter holiday, although observed by New Yorkers with universal enthusiasm, amounted to but little, however, as a flower-buying occasion. This has been the case for a number of years back, and there was no good reason to expect anything better this year. The retailers took advantage of this assurance to stand out against the hold-over Christmas figures which wholesale dealers tried to maintain on some choice lines, and succeeded in modifying prices somewhat, although there was no very serious smash-up. On Sunday evening most of the large retail establishments closed their doors at six or eight P. M., an unprecedented thing for New Year's Eve. The market at present is quiet, with a downward tendency, and should the weather continue favorable to heavy blooming, a considerable reduction in market values generally may be looked for.

INDIANAPOLIS All the growers and the leading retailers report a record breaking Christmas trade at least 35 per cent. in advance of last year. Prices ruled high in most everything especially Beauties and best grade tea roses of which there was a big shortage owing to dark weather.

Christmas greenery went better than last year. The market was not overstocked so everything was sold at good prices. Brisk sales as usual in flowering plants and made up baskets. Extra trimming of same not in evidence. Nothing in the line of novelties was seen. Business has quieted down considerably since Christmas and prices have got nearer to normal again.

PHILADELPHIA New Year's trade was not as good here as last year. The immense Christmas business done no doubt had something to do with accentuating the reaction. Stocks were plentiful and good and while prices dropped on most items they are still satisfactory. Very little business was done on Sunday, the 31st ult., and had it not been for the out of town orders the wholesale forces might as well have gone to church. The weather has been ideal.

SAN FRANCISCO The 1905th Christmas has come and gone, and with it came to plantsmen and florists the greatest trade in the history of the city. Everything seasonable in the blooming line, and some flowers out of season, were in the flower stores in great abundance, with the solitary exception of American Beauty roses. The growers did their best to be amply supplied with Beauties, but their shipments Christmas morning at advanced prices were far short of the orders florists had in hand. The out-of-season blooms referred to were good supplies of magnificent yellow chrysanthemums and rubrum lilies that had been held back by Batistie Ginochio, the Oceanview grower. These rubrums, in hampers and baskets, brought from \$6 to \$8. The supply of pot plants was beyond other Christmas seasons, and Gloire de Lorraine begonias, primroses, poinsettias, cyclamens, azaleas, berried plants and lily of the valley and other bulbous stock sold well, buyers being more than ever predisposed in favor of potted blooming plants over cut flowers for Christmas gifts. Florists were especially pleased with good supplies of improved Testouts grown by Aebi of Berkeley. In length of stem they rivaled the best Beauty, and sold as fast as they came at remunerative prices. Last week's prediction that normal prices would be maintained proved erroneous; fully 25 per cent. advance was about the way things went.

The bursting of the boiler at the greenhouses of Fred B. Barrington, Gloucester, Mass., caused a miniature flood, but the mildness of the weather prevented any serious damage to the stock of flowers and plants while repairs were going on.

Plans The Thing

**"You can build when you want to, but
there is only one time to plan"**

That time is BEFORE you build. The planning of a greenhouse does not simply mean a matter of proportions, a question of measurements, materials. It means an economy of plans—an arrangement that reduces work to a minimum, that permits heating economy.

It means to so plan—that future additions may be run equally economical.

We have made a business of right planning.

MY MARYLAND

ANNOUNCEMENT TO THE TRADE:

We, The H. Weber & Sons Co. of Oakland, Md., respectfully announce that The E. G. Hill Co. of Richmond, Ind., have withdrawn from the contract made with us last Spring whereby they would have jointly with us, disseminated our new white carnation, My Maryland.

The variety has been on trial at Richmond, (3,000 plants), Brooklyn, (300 plants) Philadelphia, (1000 plants) and Toronto, (1000 plants).

Reports from the first two named places characterize the variety as being practically worthless, while from Toronto and Philadelphia favorable reports indicate that the variety is bearing out our claims for it.

Our own stock at Oakland is in elegant shape. An extremely wet Summer necessitated the holding of stock in a semi-dormant condition after being housed Aug. 15th to Sept. 1st, thus making stock too late for the Fall shows. Since Dec. 1st we have been cutting grand blooms, and to prove our claims for the variety we invite all interested to come to Oakland and look it over. While it is a source of regret to us that the variety has not proven satisfactory in all places tried, we are satisfied that it will prove our claims for it in at least some places besides our own.

We therefore announce that we will disseminate My Maryland as per our advertisements, but before shipping any stock we give to each and every one the right to cancel all or any portion of their orders.

JESSICA, we believe will succeed everywhere. It is even better than last year. As a red and white it has no competitor. Stock ready now. Price for both varieties, \$2.50 per doz., \$12.00 per 100, \$100.00 per 1000.

The H. Weber & Sons Co., Oakland, Md.

Flower Seed Specialists

1018 Market St., Philadelphia, Pa.

Sweet Pea Christmas

The new strain has proved to be very superior for florists' use. In habit it is similar to Blanche Ferry, the pink showing up brighter than in that old favorite. It is an early and continuous bloomer, coming into bloom in about ten weeks. When the bottom branches commence to flower, stems about fourteen inches long with four flowers on a spray are the rule. It is a dwarf grower, rarely reaching over five feet. Many of my customers have spoken highly of this strain, and I have pleasure in recommending it to all who grow sweet peas for the market.

Ferns for Everyday Use

NEPHROLEPIS PECTINATA

NEPHROLEPIS DUFFII

NEPHROLEPIS CORDIFOLIA

Nephrolepis is a small genus among ferns, nearly related to *Aspidium* in botanical classification. The fruit dots are kidney-shaped and in one row on each side of the midrib near the edge and have more or less apparent little protuberances on the upper part of the leaflets, sometimes with little white chalky dots. The fronds of all the species are simply pinnate, long, sometimes very long in proportion to the breadth.

On account of the Boston fern, *Nephrolepis exaltata*, and its beautiful new forms, the *nephrolepis* is among the most grown and the most useful because of their decorative qualities, their easy growing and their quick reproduction through their numerous wiry creeping runners. It is an almost indestructible fern, for when all the fronds dry off from neglect, soon a new crop will grow, with little care. Although they are so much used for dwelling decoration, nevertheless it is in the conservatory where they show for the best, when they can creep over rocks and walls and develop their numerous beautiful drooping fronds.

It would be useless to repeat what has often been told about *Nephrolepis exaltata* and its forms, their culture and propagation, in the horticultural press. The other species need no other testimonial. But there are a few species less known and so seldom seen as to deserve to be noticed. *Nephrolepis acuta* is found in the same country as *exaltata*, all over the tropical world. They both are found in Florida. *Acuta* looks much like Boston fern, is of more erect habit, the fronds arching and not drooping and of heavier texture.

Nephrolepis cordifolia or *tuberosa* from West Indies and Central America is found also in Japan and New Zealand. It is a nice erect, compact-growing species with narrow arching fronds, the leaflets of a dark green color, set near together. In addition to the buds which grow along the runners there are some tubers which can be used for propagating. There are other species which grow tubers but they are deciduous, drop their fronds in winter, and have to be kept dormant during that time but not dried out. These tubers are of a woody nature, and would grow no more if not kept moist. *Nephrolepis pluma* from Madagascar and *Nephrolepis undulata* from West Africa are some of them; the first has long narrow pendulous fronds, the other short erect ones. Both are of soft texture and have the leaflets dentated.

Nephrolepis davallioides from East Indies is a big-growing species, has the fronds long and larger than in other species and of heavy texture. Its form, furcans, is forked at the ends of the leaflets and plumosa

is of smaller size, three and four times forked at the ends.

Nephrolepis Duffii from the South Sea Islands is one of the most interesting of the genus, relatively dwarf and erect in habit, compact growing. The fronds are very narrow, crowded with little gnarly, round leaflets, the top is arching and sometimes forked. It makes a nice pot plant.

Nephrolepis rufescens is the type of the better-known *Nephrolepis rufescens tripinnatifida*. Both are from the South Sea Islands. Both are of the most striking in the *nephrolepis* group because of their feathery appearance. The fronds are long, erect and long-stalked; the leaflets, overlapping each other, are two or three times divided, of a light green color, with brown hairy stems. Like *Duffii* and *davallioides* they require stove houses. *Nephrolepis pectinata* from Central America is the best to grow in little pots. They are furnished with narrow one-foot-long graceful pendulous fronds, fine for table decoration. In the conservatory they grow well on walls. They can be used planted in wire netting filled with soil and moss and built up in the form of pillars, etc. They make also beautiful hanging baskets.

Nephrolepis Phillipinense is a dwarf growing species too, of erect habit, the leaflets crowded and dentated, of a dark green color and leathery texture.

Taking into consideration the popularity, beauty and usefulness of *Nephrolepis exaltata* and its newer forms. I think these few species above enumerated ought to be given more attention.

Am. Duffii

Our Frontispiece

The handsome illustration on the cover page of this issue shows one of the striking sub-tropical beds at the Botanic Gardens, Washington, D. C., as planted last year. Arundos, eulalias, cyperus and other grasses lighten up the massive effect of the musas, cannas, and other large foliaged plants. The bed contained, beside four varieties of large-leaved cannas and fourteen varieties of flowering cannas, the following bananas: *Musa sapientum*, *rosacea*, *Cavendishii*, *coccinea*, *superba*, *paradisiaca*, *velutina*, *zebrina*, *Martini*, *Dacca*, *religiosa* and *purpurea*. This bed lasted in good condition until November 3.

British Horticulture

SEEDSMEN'S CENTENARY

This year the firm of Messrs. Sutton and Sons, seedsmen, of Reading, will celebrate their centenary. The business was founded in 1806 by the late Mr. John Sutton, the grandfather and great-grandfather of the present proprietors, and it has gradually extended until it has reached a leading position in the country. When asked some time ago as to the chief causes of the success achieved a representative of the firm replied: "One is that the whole of the work at home and the growing of crops for seed is under the personal supervision of the partners of the firm. Another is the cleaning of the seeds, and a third the testing." From September to March a large staff of women is employed in cleaning seeds. The workers are not paid according to the quantity of seed they pick over, but for the quantity of bad and soiled seed discovered, thus encouraging the greatest vigilance. The seeds are tested for germination in the house, and for character afterwards in the open. In every case they are counted; an entry is made of the date of sowing and as the germs appear the number is recorded. To prevent the possibility of an error the trials are duplicated, and, in the event of conflicting results, entirely repeated. A remarkable feature of the business is that no agents or travelers are employed. The founder of the firm originated the plan of selling to the customers direct, and this system has been continued to the present day.

MR. M. J. SUTTON'S ACHIEVEMENTS

Mr. Martin J. Sutton, the head of the firm, is one of the busiest men in the country. In addition to taking an active part in the business, he finds an outlet for his energies in divers directions. He has made a special study of pastures and the cultivation of grass-lands. His well-known book is recognized as the standard work on this subject. For a quarter of a century Mr. Sutton has been prominently associated with the leading agricultural societies. At the French Exhibition in 1878 he was personally decorated by the President of the French Republic with the Cross of the Legion of Honor in consideration of the distinguished services he had rendered to agriculture, whilst in 1901 the French Government bestowed upon him the Order du Merite Agricole. Mr. Sutton was the first to introduce the Irish breeds of Dexter and Kerry cattle into this country, and obtain recognition of their merits by the offering of prizes for them at the chief agricultural shows. In the departments of religious and philanthropic work Mr. Sutton has helped lavishly by his purse and by his effective public service. Last year he was elected Mayor of Reading, his term of office being distinguished by a large amount of useful work on behalf of the district. About three years ago he received the freedom of the borough, in recognition of his public services, and on that occasion Prince Christian unveiled a handsome statue of King

Edward VII. erected by the munificence of Mr. Sutton, near Reading railway station.

DINNER TABLE DECORATIONS

This is the season when special attention is given to the floral adornment of dinner tables, and a few details as to some designs noticed this Christmas on this side may be of interest to American florists. A pleasing effect is produced with an arrangement of *Cedrus deodora*, variegated *Euonymus radicans*, with blooms of Christmas rose and sprays of jasmine in the large trumpet vase in the centre. A wreath of moss surrounds the base upon which is arranged *Physalis franchetti*, relieved by sprigs of "Honesty" (*Lunaria*). Four smaller vases are arranged opposite the sides of the table and four as an outer set opposite the corners. The inner set are dressed with light sprays of mistletoe and jasmine, and the outer with Christmas roses and holly. The four inner vases are linked with green ribbon, and the outer with scarlet ribbon. The base of the smaller roses is surrounded with a small wreath of moss upon which a star is formed in the case of the outer ones of *Physalis*, and the inner of "Honesty." A good use is made of begonia *Gloire de Lorraine* for decoration. Three plants in 5-inch pots are placed down the centre of the table, and smaller plants in 3-inch pots down each side. These are sometimes placed in china bowls. The pots are connected by long sprays of *Asparagus Sprengeri*, and the arrangement looks well either by daylight or artificial light.

A SHOW OF WINTER FLOWERING CARNATIONS

Since my last note on this subject further progress has been made towards arranging a show of winter flowering carnations. Mr. Hayward Mathias, of Thames Ditton, a leading expert, has taken up the matter, with the co-operation of several noted specialists, and it has been decided to invite the growers to make a special display at one of the Royal Horticultural Society's meetings late in February or early in March. The Society is to be asked to grant medals and certificates to the exhibits. It has also been decided to convene a meeting at the show with a view to the formation of a Winter Flowering Carnation Society. From the excellent displays of carnations which have lately been made at the shows of the Royal Horticultural Society, particularly on December 19th, there can be no doubt that a very attractive exhibition will be arranged. The only point arising is, seeing that there is already a National Carnation Society in existence, holding a July show, whether it is advisable to have a separate organization for a winter display. Carnation culture is now a very important line with trade growers, immense quantities being marketed during the season. Unfortunately this particular branch, like several others, has been overdone. Some of the pioneers made money in the early stages, but the large increase in competition has brought down the prices. Competition has full play at Covent Garden, for there is no organization amongst the florists to regulate supplies.

W. H. Adsett.

London, Jan. 1, '06.

OBITUARY.

Samuel B. Parsons

Samuel B. Parsons, nurseryman, founder of the Parsons' Sons' Company, died at his home in Flushing, N. Y., on Jan. 4, aged 87 years. He started the nursery business in 1839. Six years later he visited Europe to study horticultural conditions there, and in 1859

went again on a similar mission for the United States Government. He was active in literary work, one of his best known productions being a volume on the Rose, published in 1847.

Joseph Kift, Sr.

This veteran florist passed away January 4th at his home in West Chester, Pa., aged 78. Mr. Kift had the distinction of being the oldest florist in Chester County, having conducted

his establishment on High street, West Chester, continuously for 54 years. His native place was Borough Bridge, Somersetshire, England. When 14 years old, he went to Edinburgh, Scotland, and received there a seven years' training in the horticultural trade, after which he came to America. For two or three years he remained in

New York and Philadelphia, after which (in 1851) he settled in West Chester. Mrs. Kift and four children survive. Robert, the eldest, conducts an extensive retail establishment in Philadelphia, and is well known to the trade all over the country. Another son, Joseph, Jr., does an important landscape and growing business at West Chester. The latter has the distinction of being the first to bring the Bermuda Easter lily to this country, being sent there for it by his father, who grew it extensively, and sent it out a year ahead of Mr. William K. Harris, whose name it bears. Joseph Kift was one of the kindest and most companionable of men and led an exemplary life in all its relations. He will be greatly missed by all who knew him, and their name is legion on both sides of the Atlantic.

AMERICAN INSTITUTE OF NEW YORK.

A series of popular lectures will be given free on "Agriculture and Horticulture," comprising the growing of fruits, flowers and vegetables indoors and outdoors, ornamental gardening, rural art, country life, living from the land, insect life, building of country houses, sanitation in country homes, etc., etc., which will be of particular interest and value. Several prominent experts and eminent speakers will take part in these discussions.

This course of lectures opened January 10th, 1906, at 3.30 P. M., in the lecture-room of the American Institute, Berkeley Lyceum, between Fifth and Sixth avenues, New York city, and is to be continued on the 2d and 4th Wednesdays of each month during the winter.

The first lecture, entitled "The Soil," will be given by George T. Powell, president of the Agricultural Experts Association.

All persons interested in the cultivation of land, nature study, natural sciences, country life and work, or any related subjects are cordially invited to attend.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the annual meeting of this society held on Monday evening January 8, it was voted to hold the annual dahlia show on September 13, 14 and 15th, provided the city hall can be secured for those dates. Four new members were admitted, making a total of 33 new members during the past year.

The meeting by unanimous vote, resolved to indorse, and to respectfully request of the Mayor the appointment of Wm. Keith, gardener for Thomas M. Stetson, and president of the Horticultural Society, to the position of park commissioner which becomes vacant next April. As Mr. Keith has had many years experience in the treatment of shrubberies and extensive grounds it is considered that his appointment to a place upon the board of park commissioners would be a decided acquisition.

THOMAS WHITE.

NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting was held at the rooms of the society on January 5th. There was the usual interesting installation of officers with Joseph A. Manda as master of ceremonies. It was decided to continue the monthly competitive flower displays and a desire was expressed by the younger members to be given a chance in them.

Through the munificence of Messrs. John Crosby Brown, William Barr, William Runkle and Sydney and Austen Colgate, six silver cups were presented to the winners of last year's efforts, Peter Duff and William Read for the highest number of points for flowers, Arthur W. Bodwell for first and Edward Thomas for second in the special orchid prize, John Garvin for vegetables and D. Kindsgrab for plants. A loving cup was presented to the retiring secretary, William J. Bennett, by his friends in the society, as a mark of their esteem and also to mark the event of the first marriage of an officer in the society during his term of office.

February second was set for the installation feast. Three new members were elected—John R. LeCount, Henry Meyerholtz, and Herbert T. Williams of Maplewood. Graefe's patent pivoted and adjustable flower stand exhibited by Joseph A. Manda was awarded a certificate. The floral exhibition consisted of a vase of a new seedling carnation by Geo. von Qualen; sweet peas and violets by Max Schneider; Cypripediums Gratrixianum Prinetti and a hybrid Laelia tenebrosa x flava, a most striking flower of lemon yellow with crimson pencilings. The reports of secretary and treasurer showed the prosperous condition of the society.

JOS. B. DAVIS.

NORTH SHORE HORTICULTURAL SOCIETY.

The election of officers on Jan. 5 resulted in the following: President, James McGregor; vice-president, W. B. Jackson; secretary, James Salter; financial secretary, Herbert Shaw; treasurer, John Baker; librarian, Herbert W. Clark; executive committee, F. B. Rust, Thomas Jack, Robert Mitchell, John Desmond and Joseph Clark.

A committee was appointed to arrange for the annual banquet to be held at an early date in the Town hall, with W. B. Jackson as chairman. The reports of the various officers showed the society to be in a healthy condition.

ELBERON HORTICULTURAL SOCIETY.

A meeting of this society was held on Jan. 8. Five new members were admitted. It was decided to hold the Flower Show early in July, and a preliminary schedule was drawn up and approved. Mr. W. Ross, representing F. R. Pierson Co., was a visitor, and in a few well-chosen remarks intimated that F. R. Pierson would donate a special premium for the show and would also make an exhibit. The topic of the evening, "Is it Advisable to Apply Manure to Lawns in the Fall?" took the form of a debate, the negative winning by a majority of one.

Look out for fires

This is the time of the year when the volume of greenhouse news from all sections is punctuated with notes of fires and consequent loss. Defective or over-taxed heating apparatus is the usual cause given and the loss, almost invariably without insurance, often means practical ruin for the owner. To say that the majority of these occurrences are easily avoidable is to state what all know to be a fact. It is hard to understand how those who have so much at stake can be so careless.

Ladies' night

Ladies' night, so called, at the Florists' Club, is no less a gentlemen's night, as experience has proven. The latter are by no means unresponsive to the allurements of ice cream and cake, not to mention the magnetic influences of the ladies themselves, to which no proper man is impervious. Late home-coming is inseparable from attendance on club meetings by the grower whose home and business are, of necessity, remote from the centre of activity, and it is only fair that the wives, sisters, and daughters thus often deprived of the company and protection of "our gude man" should receive compensating consideration in an occasional ladies' night or outing where they may come in contact with those whose life work lies in the same lines as their own. No club is doing its full duty nor can be said to be permanently prosperous which neglects these gentle courtesies.

Mutual obligations of wholesaler and retailer

The selling of flowers to retail customers by wholesale dealers has, from the beginning, been a fruitful cause of trouble and complaint. From what we have seen and known we believe the matter is unduly magnified by the retail dealers. There are isolated cases where open competition is carried on by so-called wholesale concerns but, as a rule, the wholesale dealer looks upon these calls by personal friends and others for broken lots of flowers as a nuisance from which he

would be glad to escape, for his own comfort. So long, however, as the retail dealer persists in his inclination to ignore the wholesaler and deal direct with the latter's sources of supply, he forfeits whatever claims of moral obligation or ethics he might otherwise justly make. The wholesale business is now well-organized in many of the large business centres, it is carried on according to established principles by responsible firms, and there is no good reason why, as in other sound and well-ordered commercial industries, the wholesale house should not have the constant and cordial support of the retail distributor so long as he is in a position to respond to the demand and supply the goods. Let it be understood that this is to be the policy, and we shall quickly see the end of retailing by wholesale houses.

Good wishes for the carnation men

The concentrated ardor so well demonstrated in the annual pilgrimages of the carnation enthusiasts at this season of the year, when traveling is a positive discomfort, commands admiration. This element of fidelity and zeal has been a prominent characteristic of the American Carnation Society from the start and its unflinching devotion to the objects for which it was organized is unsurpassed in the history of our horticultural bodies. The lesson of its successful career and the reasons therefor should not be lost on our clubs and societies everywhere. It is our hearty hope that the blizzard weather which has beset the carnation men at their every convention for a number of years may be graciously side-tracked on the occasion now so close at hand and that the adherents of the divine flower, together with their prized products may, for once, all arrive at their destination in prompt time and faultless condition. Their perseverance certainly entitles them to this good fortune.

The death of Samuel B. Parsons

The horticultural world will learn with a feeling of sadness of the death of that eminent and lovable horticulturist, Samuel B. Parsons. Half a century ago he stood in the van-guard of the men who, actuated primarily by their love for nature and the products of the garden, laid the substantial foundations of American horticulture as we know it today. That the good which men do lives after them was never better demonstrated than in the beautiful town of Flushing, Long Island, where on every side one sees ornamental trees of rare perfection all bearing silent testimony to the benign home influence of the Parsons' nursery. The fascinating book on the rose, its history, poetry, culture, and classification, published by Mr. Parsons in 1847 is still well worthy of a place on the bookshelf of every rose lover. It is not only a work of high literary merit but overflows with the earnest, inspiring sentiment of an author full of affection for his subject. The passing away of such a man, even after advancing years have forced him from the sphere of activity, makes the world poorer.

AFTER ADJOURNMENT.

We deprecate the use of a good magazine for wrapping paper and entertain a feeling of pity for the man who makes such a disposition of the permanently useful reading which HORTICULTURE provides. Yet it seems that even this humiliation does not always impair its usefulness, as witness the party who received a shipment of plants, and being attracted by an advertisement on the sheets of HORTICULTURE used as wrappings, at once forwarded a substantial order to the advertiser and telling of the circumstance as above related!

"Many a shaft at random sent
Finds mark the archer little meant."

It is our humble opinion that the esteemed correspondent of the Florists' Review is misinformed when he states in issue of January 4, that "less than 2000 flowers were staged when the A. C. S. last met in Boston." It is our recollection that there were more than 2000 flowers in the class for "vases of 100 each," alone. It was a superb exhibition of the development of the carnation up to date, and the entire proceedings from first to last were enthusiastic and inspiring. It is true that most of the varieties then exploited have gone into oblivion, as have also a majority of the varieties brought forward for five or six years thereafter. The introduction of Prosperity and Lawson blood has revolutionized the carnation industry.

NEWPORT PERSONALS.

Among the visitors to Newport recently were John Beaton, representing R. & J. Farquhar & Co., John Morrison, of Weeber & Son, W. N. Campbell, J. C. Vaughan, William Marshall and Thomas Grey, of Boston.

Plans are being prepared for alterations and improvements on the estate of Gordon King, Esq., which include the planting of extensive shrubberies.

After a fair trial, James McLeish has come to the conclusion that Gros Coleman grapes do not pay, and intends to discard the vines entirely. This condition is in part at least owing to the cheap foreign product (mostly Belgian) pouring into the New York market and selling as low as 25 cents per pound. That is reason enough surely for throwing the vines out.

AN INCREASE IN BUSINESS.

The King Construction Co., of Toronto, Ont., and North Tonawanda, N. Y., in order to meet the increasing demand for their greenhouse structures and equipment, have considerably enlarged their buildings and plant at North Tonawanda. This increase will enable them to at least double their present output in the United States for 1906.

In Canada also their growing business has demanded better accommodations. To meet this want the firm has purchased recently a down-town site opposite the G. T. R. new freight sheds. Possession is to be given about January 11. As soon as additions can be made to the Canadian works the offices of the company will be centered on this property. A special feature of interest to the florists will be a showroom in which samples of greenhouse structures and accessories will be displayed.

SEED TRADE.

The crop of Victoria aster seed in Europe is very short.

Chas. P. Braslan and Russell L. Woldenberg are visiting New York.

Who is the fortunate man to get the government seed order under date of January 6?

California seed growers are refusing onion seed contracts for 1906, claiming that onion bulbs are in very short supply.

A word to the mail order houses issuing catalogues. Hold firm for high prices on Globe onions. All stock will be needed before April 1, 1906.

J. J. H. Gregory & Son, of Marblehead, Mass., have just celebrated their fiftieth anniversary as successful seed growers. In these years they have built up an extensive business and won a reputation for reliability that is unquestioned.

Some California visitors seeking recreation and health: J. E. Northrop, of Northrop, King & Co., with family, at Hollywood; F. T. Emerson at San Diego; Trimble McCullough, of J. Chas. McCullough at Los Angeles.

AMERICAN SEED TRADE ASSOCIATION.

The executive committee of the American Seed Trade Association met at Dooner's Hotel, Phila., and decided that because of the few members who would be able to go to California that trip had better be postponed and the invitation to meet at Toledo accepted. The routine business was the arrangement of program. The following members were in attendance: President W. H. Grenell, Pierrepont Manor, N. Y., Secretary C. E. Kendell, Cleveland, O., C. N. Page, Des Moines, Ia., I. F. Willard, Wethersfield, Conn., M. H. Duryea, N. Y. City, F. W. Bolgiano, Washington, D. C.; V. P. Stokes, H. W. Johnson, W. A. Burpee, H. M. Earl, Burnet Landreth of Philadelphia, C. H. Breck, Boston.

NASSAU COUNTY, N. Y., HORTICULTURAL SOCIETY.

This society held its regular monthly meeting on Wednesday, Jan. 3. It was the largest attended meeting in the history of the society. President Harrison occupied the chair. Four new members, including William F. Ross, representing F. R. Pierson Co., Tarrytown, N. Y., who was present, were elected to active membership. Mrs. E. R. Ladew was elected an honorary member. It was decided to hold the society's annual dinner on January 27.

BUSINESS CHANGES.

The business of Jacob Bauers, of Cleveland, O., has been purchased by Fred Moritz, who has transferred the plant to his present location, 62 Edmunds street.

Lion & Wertheimer, 463 Broadway, New York, have dissolved partnership. Wertheimer Bros. will be the name of the firm hereafter.

At the last meeting of the Board of Trade of Providence, R. I., resolutions were adopted favoring the enactment of such legislation by Congress as should be needed to preserve the New Hampshire forests.

PHILADELPHIA NOTES.

Frank Ross, 206 East Girard Ave., has failed. At a meeting of the creditors held on the 6th inst., the liabilities were stated to be \$3,200; assets \$300.

Peter J. Schembs, 629 North 17th St., has opened a branch store in the basement N. E. corner 15th and Chestnut Sts.

Chas. P. Braslan, of the Braslan Seed Growers' Co., California, was a visitor this week; also Lloyd Blick, Norfolk, Va.

Mr. Taat, representing M. Van Waveren & Sons, visited us this week. He is the advance guard of the forty or more Holland men who will arrive on this side during the next few weeks. This annual influx is setting in earlier and more severe than ever.

Robt. Forrest, for many years head gardener for Beauveau Borie and later with Robert Craig & Son, has accepted the position as grower for the Colfax Floral Co., Denver, Col. Mr. Forrest has shown his ability at many of our local shows and will doubtless give a good account of himself in his new field.

Dennison Bros., Bala, had a fire in their boiler shed on the 8th inst., which put their heating system out of business. Unfortunately this mishap occurred just when a severe cold spell struck this locality and the resulting loss in stock is estimated at \$5,000. Much sympathy is expressed for the firm under this severe misfortune.

The program for the Farmers' Institute for Philadelphia County has now been completed. This event will take place in conjunction with the monthly meeting of the Horticultural Society, Tuesday, 16th, afternoon and evening. Edwin Lonsdale is chairman.

Alex. B. Scott thinks Richmond has the field not because Liberty isn't the better rose but because the other is almost as good, and most people can grow it.

PACIFIC COAST NOTES.

New Year's day weddings are getting to be all the go in the Pacific Coast States and the demand from the country towns and hamlets for San Francisco-made flower pieces on these occasions makes a perceptible increase in the volume of holiday business.

It is estimated that 50,000 visitors were in Pasadena on New Year's day to witness the rose carnival celebration which has become one of the annual features of Southern California's winter season. The day was disagreeably cold but the show was worth seeing, the various vehicles being beautifully decorated with every flower that thrives at this season of the year.

PERSONAL.

D. Lumsden, late of A. Leuthy & Co., has been engaged as manager for the Wm. W. Edgar Co. at Waverley, Mass.

A Schulthies, College Point, N. Y., has been critically ill for several weeks with little hope of recovery but we are glad to state that he is now convalescent.

NEWS OF THE CLUBS AND SOCIETIES

NEW YORK FLORISTS' CLUB.

At the January meeting of this club last Monday night, fifty members were present. The new officers were installed, various committees presented their annual reports, all being very gratifying, and same were duly accepted. The new president, John Scott, was introduced by retiring President F. H. Traendly, and was given a very cordial reception. In his opening address he expressed appreciation for the honor conferred on him. He recognized the high standard of efficiency reached by his predecessors and expressed his desire to maintain the same through the coming year. In an outline of the practical work which he hoped to see carried forward, he urged that the membership list be largely increased, that the system of exhibiting novelties, etc., at the meetings be encouraged, that lectures and essays with free discussions be promoted, approved the holding of small public exhibitions at intervals in an inexpensive way, the encouragement of the social features, and advocated ladies' nights and other recreations as desirable to hold the interest of the younger element.

The other officers-elect all spoke briefly also. Committees on legislation, essays, outing, awards, exhibition, entertainment and annual dinner were appointed, and resolutions on the death of Mrs. C. L. Allen were presented. Six new members were elected and eight more were proposed. The election to fill vacancies on board of trustees resulted in the selection of J. B. Nugent for the two-year term, and A. L. Miller for one year. The secretary's report showed that thirty new members had been added during the year, and the average attendance at the ten meetings had been sixty-two. The committee on awards reported on the exhibits of the evening, that carnation Robert Craig, shown by Cottage Gardens, received a certificate at a former exhibition, but the flowers now shown showed that its qualities were still fully maintained; that carnation Victory had also received a certificate previously; that a number of promising seedlings were shown by R. C. Pye, also the beautiful pink variety Senator Crane, to which the committee recommended a preliminary certificate. An invitation to attend the annual smoker of the Morris County Gardeners' and Florists' Club at Madison, N. J., on the evening of Jan. 10, was accepted with thanks.

The question of holding a pre-tenacious flower show during the coming season was then taken up and freely discussed, Messrs. O'Mara, Guttman, Jas. Scott, Wallace, Nugent, Wheeler, Pepper and Ward participating. The experiences of the club in past years in the exhibition were rehearsed in detail and the various phases of New York patronage and facilities as compared with those of other cities analyzed. The fact that for the past two years the field had been covered acceptably by the American Institute and Horticultural Society being recognized it was voted that the matter be referred to the board of trustees for consideration and report at the next meeting of the club. The suggestion

of a free exhibition at the Newsboys' Home was referred to the exhibition committee.

MADISON GARDENERS' AND FLORISTS' CLUB.

It has been said that happiness was born a twin and that solitary happiness is an impossibility. The Madison, N. J., fraternity run business on this precept, undoubtedly, and so when there is a "smoker" at Madison there is no dearth of company. Again the annual smoker has passed into history with a big credit to its name. Over one hundred were in attendance last Wednesday evening. Up to present writing a few of them had got home. The program consisted of some routine business in which the treasurer participated with the record of a big bank balance and then a wide-open good time, with recitations, banjo solos, soliloquies and other diversions frequently interrupted by trays of viands such as no sane visitor could refuse. All roads led to Madison Wednesday evening and the travelers thereon were all of one mind. There is no rival for the Madison smoker. It is unique.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual meeting of the Massachusetts Horticultural Society on Saturday, January 6, was presided over by Vice-President Walter Hunnewell in the absence of President Estabrook. The report of the treasurer showed the invested funds of the society to amount to \$831,396.88.

The first exhibition for the year 1906 will be held at Horticultural Hall on Wednesday and Thursday, January 24 and 25. It will consist principally of primulas, begonias, violets, and vegetables, and will be held in connection with the annual meeting and exhibition of the American Carnation Society.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

The regular meeting of this society was held in their hall in the Currier Building, on Tuesday, Jan. 2, a large number of members being present. Officers for the coming year were elected as follows: Robert D. Pryde, president; John H. Murray, vice-president; Thomas Pettit, secretary; David Kydd, treasurer. Board of Managers: A. J. Thompson, F. Duffy, James Moore, Richard Bell and Robert Paton.

The treasurer's and secretary's reports show that the society is in a very flourishing condition, and that the last exhibition was a financial success. Scarcely a meeting passes but what new members are elected. The membership is now about 125.

AMERICAN CARNATION SOCIETY.

A delegation of the reception committee of the Boston Gardeners' and Florists' Club will meet all trains at the North and South terminals, the Back Bay station of the New York, New Haven and Hartford, and Trinity Place station of the New York Central railroad on Wednesday A. M., January 24, 1906. Members of this committee will wear a red badge.

CHICAGO FLORISTS' CLUB.

A well attended meeting of the Chicago Florists' Club was held Dec. 28 at Handel Hall. Carnation Aristocrat, recently purchased by the Chicago Carnation Co., was on exhibition and elicited admiring comment from all present. The records of the Chicago Flower Show were reviewed and showed about \$5000 on the right side of the ledger. A number of new members were installed, as were also the new officers as follows: P. J. Hauswirth, president; Leonard Kill, vice-president; Ed. Sanders, treasurer; Geo. Asmus, financial secretary; L. H. Winterson, recording secretary. Frank Benthley, W. L. Palinsky, H. N. Bruns, J. Reardon, J. T. Klimmer, trustees for 1906.

The next meeting will be held Thursday, Jan. 18, 1906, at Handel Hall.

NATIONAL NUT GROWERS' ASSOCIATION.

The proceedings of the third annual convention of this association, which was held in St. Louis, Mo., October, 1904, is a most interesting and valuable pamphlet of 150 pages.

It gives all of the twelve formal addresses, a full report of the various practical discussions, important statistical tables, reports of standing and special committees, cuts of executive officers, names of all officials, with roll of new members and carefully selected advertisements. Any one interested in nut culture will find this volume a most valuable and fascinating work.

Copies can be obtained of the secretary, J. F. Wilson, Poulan, Ga., for 25 cents, plus cost of postage which is four cents per copy.

TARRYTOWN HORTICULTURAL SOCIETY.

The annual meeting of the above society was held on Thursday evening, Dec. 28. The chief business was the election of officers for 1906. Joseph Mooney, Hastings, N. Y., was elected president; Howard Nichols, Yonkers, N. Y., vice-president; C. W. Neubrand, Tarrytown, secretary; James T. Lawrie, Tarrytown, treasurer; James Ballantyne, Tarrytown, corresponding secretary.

The secretary's report showed that the society had 145 active members in good standing, 42 honorary, and 5 life members. The treasurer's report showed a substantial balance in favor of the society. Eleven new members were elected at this meeting and four names proposed for membership.

The monthly prize donated by David McFarlane for eighteen carnation blooms was won by Abel Weeks. John Featherstone, gardener to Samuel Untermeyer, Yonkers, showed a beautiful hanging basket of begonia Gloire de Lorraine, which was declared by the members to be the best-flowered specimen of this popular begonia ever shown in this section. At a meeting of the executive committee held on Tuesday evening, Jan. 2, the date of the annual dinner was fixed for Jan. 17, to take place at the Florence Hotel, Tarrytown. Tickets may be had from E. W. Neubrand, secretary.

WILLIAM SCOTT, Cor. Sec.

"GLENDALE"

New Variegated Carnation

Markings similar to Mrs. G. M. Bradt. A very large flower on strong stems, extremely free and healthy. A non-burster. A fancy of the highest type.

Sample blooms expressed at \$1.00 per dozen. All our carnations have been rather late this season as elsewhere. That is the reason we have not been advertising "GLENDALE" as well as other varieties more extensively.

Rooted Cuttings \$12.00 per 100: \$100.00 per 1000.

Introducers { **Chicago Carnation Co., Joliet, Ill.**
W. J. & M. S. Vesey, Ft. Wayne, Ind.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of this society was held Saturday, January 6th, President S. Carlquist in the chair. The essay and entertainment committee have arranged a program for every meeting until May. The annual report will be printed before the next meeting; copies will be furnished by the secretary upon application. The society has accepted a silver cup offered by F. R. Pierson Co., Tarrytown, N. Y., to be competed for at its next Chrysanthemum Show, from their list of novelties for 1906. Grenvill Winthrop, Esq., presented to the society two cases of the gypsy and brown-tail moths, with eggs, cocoons, caterpillars, male and female moths.

The annual ball will be held February 6th. After adjournment a social hour was enjoyed.

NEW DIRECTORS OF THE SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

President W. F. Kasting has appointed as directors for the term of three years, Messrs. F. H. Traendly

F. H. TRAENDLY.
New York, N. Y.

NEW CASTLE FLORIST CLUB.

The organization known as the New Castle Florists' Club held its first meeting Dec. 5, 1905, to organize and make by-laws, which were adopted at a special meeting called one week later, when it elected officers as follows: President, Ernest Bender; vice-president, George Staff; secretary and treasurer, Frank Benthays; directors, G. Wiedenhoef, O. Staub, Charles Rathjen and Jack Lenon.

This club was founded for social purposes only. Meetings will be held on the last Tuesday in each month, and semi-annual meetings in July and January.

The annual meeting of the New Hampshire Horticultural Society will be held at the rooms of the State Board of Agriculture, January 17, at 11 a. m.

and P. J. Hauswirth. For the unexpired term (one year) of H. M. Altick, who was elected vice-president at the last convention, he has named H. H. Ritter. The two first-named gentlemen need no introduction to our readers. As representing the younger and hustling components of the national society they may be expected to do much to rally around the young president that enthusiastic support and esprit de corps which, added to the unswerving loyalty of the older and more conservative element, will make the Dayton convention a noteworthy event and mark the administration of 1906 as a brilliant and popular success. Both of these gentlemen have given repeated evidence of their capacity for organization and leadership in their respective communities. Mr. Traendly has just completed a two years' term as president of the New York Florists' Club, and Mr. Hauswirth is entering on a similar service in the Chicago Florists' Club. Both have been prominently identified with the bowling diversions at the S. A. F. conventions, Mr. Hauswirth having served as chairman of the committee on sports.

Mr. H. H. Ritter is one of the old staunch members of the S. A. F., whose name has been uninterruptedly on the roll from the first convention at Cincinnati. His selection is an appropriate recognition of sturdy fidelity

NEWPORT HORTICULTURAL SOCIETY.

The society's first regular meeting of the new year was held on Wednesday evening, January 3, President Alexander MacLellan in the chair. The committee's report of the ball recently held showed a balance to the credit of the society of upwards of one hundred dollars. While the committee as a whole deserve credit for the result noted, the society recognized Mr. W. F. Smith in particular as the member on whom a great part of the work fell and who did it with his usual good will and energy. Mr. Smith and the committee received the thanks of the society.

On January 23rd the society will have a supper to celebrate its 15th anniversary. If precedents count for anything, this occasion will be one to be long remembered.

and of the section which contributed so much to the good start made at that first meeting.

P. J. HAUSWIRTH.
Chicago, Ill.

"Aristocrat"

Announcement.

We herewith confirm the reports, so far as our purchasing the above carnation is concerned. We intend to disseminate same January 1st, 1907. We do not think it necessary at this time to commence boasting of its good qualities and commercial value that has been proven and will be proven again to your satisfaction.

We are now soliciting orders for January delivery and while we do not make a specialty of booking orders subject to cancellation we believe that to cancel is everyones right, if a variety does not live up to its reputation and we respect it if done right and honorably. Orders are already coming in heavily and we strongly advise your placing orders immediately as January bookings will soon be closed.

"Aristocrat" is O. K. and you will not be able to help yourself from buying it later, so place order now as we shall not over book ourselves on it, as we must make good and that is one of our reasons for securing it.

Color: brighter than Lawson, a little brighter shade. Calyx; does not burst. Habit of growth; taller than Enchantress, more wirey and more free. Produces cuttings freely which root easily. Has no disease of any description. Size, as large as Enchantress but form more perfect than any other carnation.

Rooted Cuttings \$12.00 per 100; \$100.00 per 1,000; 5,000 \$450.00; 10,000 \$800.00.

CHICAGO CARNATION CO., James Hartshorne, Mgr., Joliet Ill.

WANTS.

GOOD MEN

When you need good men, skilled or unskilled, write:

THOS. H. BAMBRICK

34 South 7th Street, Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

FOR SALE.

Well established Florist business, 6000 feet glass, well stocked with carnations, violets, bedding plants, palms, etc. Splendid location on corner of two main avenues leading towards the best part of principal residential districts. Excellent home trade and good field for landscape gardening; no competition as yet. Store attached to greenhouse with electric light. Commodious house with modern improvements. Barn, shed, good water supply. Excellent opportunity for progressive florist. Reason for selling, wish to retire from business. Apply to F. S. MENSE, Glen Cove, L. I., N. Y.

WANTED—A first class orchid man to take charge. Address, stating all particulars, N. E. H., care Horticulture, 11 Hamilton Place, Boston.

CATALOGUES RECEIVED.

Golden State Plant and Floral Company, Santa Monica, Cal., souvenir for 1906. A collection of lovely views in Santa Monica, where perpetual summer reigns.

We hope our readers, will as far as possible, buy everything they need from Horticulture's Advertisers.

Announcement To the Trade

We beg to announce that we have purchased the property and business of the L. K. PEACOCK, INC., including the entire stock of the Peacock Dahlias, and will continue the business on a more extensive scale.

We have secured the services of Mr. L. K. Peacock and all the experts who have been associated with him. Mr. Peacock has been identified with the trade for the past twenty years, and during that period has produced such noted varieties as *Nymphaea*, *Clifford W. Bruton*, *William Agnew*, *Miss May Lomas*, *Storm King*, *Snow Clad* and over fifty other standard varieties, not to mention the Twentieth Century and the subsequent Century collections.

The past season was a most favorable one for Dahlias, and as every plant bloomed freely we offer our stock as the best grown, and absolutely true to name.

We are prepared to fill all orders promptly and are now booking contracts for 1907.

Our 1906 Catalogue will be ready for distribution early in February, and will be mailed to each of our customers and others upon application.

BELATED HOLIDAY REPORTS.

Kansas City reports a banner Christmas for flowers as well as for plants. The demand was unprecedented for flowering plants. In flowers everything except orchids and American Beauty roses sold rapidly at excellent prices. On these two items demand dragged at prices retailers were compelled to ask.

The activity of San Francisco's cut flower and blooming plant market between Christmas and New Year's, was something unprecedented. Several florists told me it is becoming the custom with the great Jewish population of the city to line up with the prevailing American custom to give floral presents at this time, as they do so liberally on their own New Year holiday. The past four days, since the close of 1905, the florists have enjoyed a comparative state of rest, a feeling they had not experienced since three or four days before Christmas. All seasonable cut flowers and blooming plants and greens are still plentiful, American Beauty roses only being the exception.

"ARISTOCRAT."

Considerable free advertising has been given to this famous carnation by the daily press all over the country. We florists at one time used to figure such stories of \$30,000 and \$40,000 for a new carnation as absurd and hurtful and were ashamed of them when questioned in regard to their reliability by the public. But of late years we have come to realize that these same stories have advertised and helped our business to a considerable extent and have hurt no one in the least. Let me state, however, that neither the originator, Mr. Witterstaetter, nor the Chicago Carnation Company, are seeking notoriety by these methods. The price my company paid for "Aristocrat" has not been divulged nor do we intend it shall be, as that part of it concerns no one but the parties to the contract. It is hardly necessary for me to tell the florists that no such sum was paid for it; at the same time we both hope and believe that "Aristocrat" will be worth all and more than \$40,000 to the trade. I personally have watched "Aristocrat" for the past three or four years and have seen it grown under various conditions and at different times of the year. I was so impressed with it last season, long before the January Carnation Meeting, that I tried to purchase it, but Mr. Witterstaetter turned a deaf ear to all my proposals, saying he intended to convince himself by a further and thorough trial that "Aristocrat" should not leave his place, either by selling it outright, or by dissemination until he was sure it was all we thought it to be. As the variety is now five years old and he has been able to grow it in quantity, our highest hopes as to its value in every respect have been realized. Hence the sale (the greatest that ever was).

"Aristocrat" in color is a trifle lighter than Lawson and very much brighter and is expected to displace that grand old variety in the hearts and greenhouses of every one.

When I first saw the Lawson, and even after my company failed to get possession of it, I predicted that it would be grown after all carnations of that day were out of business. It was hard for me to make many florists believe that, but my judgment, as you now know, was not misplaced. I now claim that "Aristocrat" is just as far superior to present-day varieties as Lawson was in its day, and will live longer than any variety I know of, but to be thoroughly appreciated it should be seen growing at Witterstaetter's, Cincinnati, who will make an attempt to show it in good shape at Boston this month, notwithstanding the fact that his train leaves at noon on Monday and the flowers will not be judged until Wednesday afternoon. It can also be seen at William Nicholson's, Framingham, Mass., in a small quantity.

JAMES HARTSHORNE.

C. C. Yost, the florist, of Lebanon, Pa., opened a new store at 154 N. 8th street, just before Christmas.

CUT FLOWERS

PHILADELPHIA CUT FLOWER CO.

Wholesalers of Cut Flowers

1516 AND 1518 SANSOM ST.

VICTORY

The most brilliant scarlet carnation. Requires only ordinary culture. Is a fancy in the fullest sense of the word and wholesaled at \$25.00 per 100 at Christmas.

Cut Flower Market Reports.

BOSTON Trade during the past week has been rather quiet, with a remarkable increase in the supply and prices have been reduced accordingly. This has been particularly noticeable with violets and carnations. Enchantress and Lawson have had the largest call; white carnations have moved rather slowly. The demand for American Beauties is fairly good. Bride and Bridesmaids sell well at prices about the same as last week. The demand for lily of the valley has increased. Roman hyacinths, paper white and yellow narcissi are coming in in large quantities.

BUFFALO Cloudy weather together with heavy storms the past week, made stock still a little scarce, but there was enough to go around. Roses came in somewhat better and cleaned up quickly. Much funeral work being in demand caused white material to move freely. Sales of Beauties, Liberties, lily of the valley and violets were nearly at a stand-still, but livened up to some extent at the end of the week. The carnation crop was fairly good, and excellent stock could be seen; fancy selling at sight, while ordinary needed a little urging at times. Peas, mignonette and green goods in moderate supply. Prices changing a little to a decline.

CHICAGO "He that has the last say has the best say," and so it is with Chicago. If you ask a wholesaler, a retailer, or a grower regarding the holiday trade, they all say it was stupendous, and

outdistanced everything within the last ten years. A pronounced shortage of Beauties of the fancy type made itself felt before Christmas, and was at its height before New Year's day. Quotations were exceeded in every instance, Beauties bringing as high as \$150 per hundred. Good Bridesmaids brought \$25. All pink roses were very scarce. Killarney sold as high as \$35 per hundred for good stock, and there was not enough to go around, although it was the only rose that was not seriously interfered with by the dark weather preceding Christmas. There were plenty of Liberty, and many Beauty enthusiasts had to be content with this as a substitute for America's favorite. Immense quantities of Uncle John roses were sold by one house and found a ready market, replacing Chatenay and Bridesmaids. All told, roses were very scarce, and goods that would not bring over \$1 ordinarily brought fifteen times that price in mixed lots. The greatest demand existed for red flowered and berried plants, red material bringing almost any price demanded. There was a sufficiency of greens such as lycopodium, etc., which arrived at the last moment, but good holly was scarce. A novelty in the Chicago market were the spruce tops from Maine, and tops covered with cones brought from \$50 to \$100, according to size, and were eagerly taken at that price. There was an insurmountable shortage in Christmas bells. The demand was also good for carnations and fancy goods were scarce, finally climbing to \$15 per hundred. Narcissi, Roman hyacinths, callas, mignonette, etc., were taken eagerly and the demand for smilax also exceeded expectations. Through all the rush the Chicagoan never lost his stoicism, but calmly ordered his Christmas flowers with the remark that there seemed no way out of it—the flowers are needed and we'll pay for them, their motto, "I will," being carried out to the letter. The year 1905 looked poor for a starter, but it wound up as the banner year after all, and now, away we go to "whoop 'er up" for a happy and prosperous 1906.

The cut flower market **CINCINNATI** has been quite active during the past week, chiefly due to the scarcity of first-class stock. Business has settled down to that steady gait which we all so much like to see; nearly all stock is just scarce enough to keep the price firm. Funeral work has been an important factor in moving the cheaper grades, and the usual holiday reaction has not been felt to any extent. Easter lilies are scarce; this is chiefly due to the large number of longiflorum bulbs substituted for Harrisii. Bulbous stock, such as Roman hyacinths and paper whites, is not over plentiful and moves fairly well. A few tulips can be seen

here and there, but they are too short-stemmed to be of much use. The supply of violets exceeds the demand, consequently the price has taken a drop. Asparagus, smilax and adiantum seem to have been pretty well used up for the holiday trade, and will be scarce for a while.

LOUISVILLE Business conditions the past week were up to the standard, stock moving very nicely. Carnations were in the lead, their quality and supply being up to expectations. The quality and supply of roses is fair, and there is nothing the matter with the demand. Violets and lilies of the valley are breaking records on demand and quality, but the supply of the former is not so very encouraging. Other stock, such as hyacinths, narcissi, etc., meets with a satisfactory demand.

NEW YORK Business is fairly satisfactory. Carnations are selling rather slow and at low figures for the quality which is generally excellent. The demand for large roses is brisk. Tulips and other bulbous stock are being received in increasing quantity and improved quality.

PHILADELPHIA. On the whole we are justified in reporting trade as fair for the season. The week after New Year's is always a little slow. This year was about the usual. The worst slump was in carnations which, on account of the bright weather, came in freely. Of course, the rose market dropped quite a little also. Beauties fared the best, as there were quite a number of important functions which took a large quantity of these. Gardenias have been very scarce, and 75 cents a bloom has been the ruling wholesale figure, but they are now more plentiful, with price in proportion. White violets have a limited market on orders. The demand as yet is too intermittent to warrant carrying stock. White lilac sprays are popular and fairly plentiful at present. Cypripediums are rather scarce, but other orchids are in normal supply.

TOLEDO Christmas and New Year's business has been a little better here than last year and the first week of this month is reported as having been specially good. There were no special novelties offered in the stores; either our town has not been struck yet by the people who want something special or the florists have not the grit to offer something out of the ordinary which I believe is the case; if goods are not offered they cannot be sold. Carnations are coming along now very nicely and roses have been doing well too; in bulbous stock nothing but white Roman hyacinths and paper white narcissi are offered.

Greenhouse Material

We are at all times ready to tell you about our greenhouse material.

If you contemplate building—write us of your needs and we will cheerfully talk the matter over.

Our wide experience may be of benefit to you—it may put dollars in your pocket book.

Sketches will be submitted if you are going to build—also estimates.

Write now while you think of it.

JOHN C. MONINGER CO.—Chicago

117 BLACKHAWK STREET

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

E. HIPPARD, Youngstown, Ohio

Kroeschell Bros. Co.

IMPROVED

Greenhouse Boiler,

35 Erie Street, CHICAGO.

Boilers made of the best material; shell, firebox, sheets and heads of steel, water space all around front, sides and back. Write for information.

NOW IS THE TIME TO INSURE YOUR GLASS AGAINST DAMAGE BY HAIL. For particulars address

BOROUGH OF BROOKLYN, N. Y. CITY

IT IS WELL TO KNOW ALL THE MINOR DETAILS OF THIS GREENHOUSE BUILDING MATTER

You receive the materials; your house is completed, satisfactory. You have a conviction that the thing is going to last. You liked the way everything went together perfectly, and no alterations to run up expense, but you did not stop to think what endless PARTICULARITIES at the factory such a result meant. Take as an example the matter of painting, you'll admit that a good prime coat is the basis of all lasting painting. You perhaps also know that cypress will absorb more oil than any other wood! Now if you just brush a coat on, the oil is at once absorbed, leaving the wood covered with a chalky, ready to rub off pigment,—the next coat only repeats the result. Take a good look at this illustration, see how we dip straight into a reservoir of paint EVERY PIECE, letting it SOAK UP the oil; each piece is then stood up to drip off (not brushed off). Another point to fix in your mind;—the ends—where the joints come,—are by this method just as thoroughly protected. Now after all this care, we give it a good coat of brushed on oil and lead.

(Next week another particularity.)

YOU ARE INVITED!

The
HOLLY-CASTLE
Electric Circulator

The
Sensation of the
Season

The wide spread interest and curiosity concerning this remarkable appliance for comfort, convenience, certainty, and economy in greenhouse heating, leads us to extend an invitation to all attending the **Carnation Convention** at Boston to visit the Dickerman Greenhouses at Dorchester, Mass., where the apparatus has been installed and see a demonstration of its working. A special car will start from Horticultural Hall, Boston, at 1.30 p. m., on Thursday, January 25, the second day of the Carnation Convention.

HOLLY-CASTLE CO., Engineers, 49 Federal Street, Boston, Mass.

1765.

HIGHEST AWARDS AT ST. LOUIS, 1904.

1906.

The above represents the largest factory of its kind in the world.

OUR PRODUCTION OF POTS EQUALS THE COMBINED OUTPUT OF ANY TWO SIMILAR ESTABLISHMENTS

Our equipment is the best that money and 140 years' experience can produce. We have spared neither time nor expense to make our factory the most modern and complete of its kind.

Our Annual Output of Pots Exceeds 16,000,000

We thank our friends and customers for their liberal patronage, and solicit the correspondence of prospective buyers.

We extend cordial invitations to all attending the Convention to visit our factory.

SEE OUR NEW CARNATIONS AT THE CONVENTION

Winsor, White Enchantress, and Helen M. Gould

This is one way to judge carnations. A better and more convincing way is to see them growing. There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

This is a pure white sport of Enchantress, which is at once the most popular and most profitable carnation grown to-day; and this on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those who desire quality as well as quantity will find it in White Enchantress.

HELEN M. GOULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class.

Come and inspect our stock of new and standard sorts for yourselves.

MY MARYLAND

ANNOUNCEMENT TO THE TRADE:

We, the H. Weber & Sons Co. of Oakland, Md., respectfully announce that The E. G. Hill Co. of Richmond, Ind., have withdrawn from the contract made with us last Spring whereby they would have jointly with us, disseminated our new white carnation, My Maryland.

The variety has been sold at Richmond, (3,000 plants), Brooklyn, (300 plants), Philadelphia, (1000 plants) and Toronto, (1000 plants).

Reports from the first two named places characterize the variety as being practically worthless, while from Toronto and Philadelphia favorable reports indicate that the variety is bearing out our claims for it.

Our own stock at Oakland is in elegant shape. An ex-

remely wet Summer necessitated the holding of stock in a semi-dormant condition after being housed Aug. 15th to Sept. 1st, thus making stock too late for the Fall shows. Since Dec. 1st we have been cutting grand blooms, and to prove our claims for the variety we invite all interested to come to Oakland and look it over. While it is a source of regret to us that the variety has not proven satisfactory in all places tried, we are satisfied that it will prove our claims for it in at least some places besides our own.

We therefore announce that we will disseminate My Maryland as per our advertisements, but before shipping any stock we give to each and every one the right to cancel all or any portion of their orders.

JESSICA, we believe will succeed everywhere. It is even better than last year. As a red and white it has no competitor. Stock ready now. Price for both varieties \$2.50 per doz., \$12.00 per 100, \$100.00 per 1000.

THE H. WEBER & SONS CO., = = Oakland, Md.

"Aristocrat"

Announcement.

We herewith confirm the reports, so far as our purchasing the above carnation is concerned. We intend to disseminate same January 1st, 1907. We do not think it necessary at this time to commence boasting of its good qualities and commercial value that has been proven and will be proven again to your satisfaction.

We are now soliciting orders for January delivery and while we do not make a specialty of booking orders subject to cancellation we believe that to cancel is everyones right, if a variety does not live up to its reputation and we respect it if done right and honorably. Orders are already coming in heavily and we strongly advise you placing orders immediately as January bookings will soon be closed.

"Aristocrat" is O. K. and you will not be able to help yourself from buying it later, so place order now as we shall not over book ourselves on it, as we must make good and that is one of our reasons for securing it.

Color: brighter than Lawson, a little brighter shade. Calyx; does not burst. Habit of growth; taller than Enchantress, more wiry and more free. Produces cuttings freely which root easily. Has no disease of any description. Size, as large as Enchantress but form more perfect than any other carnation.

Rooted Cuttings \$12.00 per 100; \$100.00 per 1,000; 5,000 \$450.00; 10,000 \$800.00.

Sweet Pea Christmas

The new strain has proved to be very superior for florists' use. In habit it is similar to Blanche Ferry, the pink showing up brighter than in that old favorite. It is an early and continuous bloomer, coming into bloom in about ten weeks. When the bottom branches commence to flower, stems about fourteen inches long with four flowers on a spray are the rule. It is a dwarf grower, rarely reaching over five feet. Many of my customers have spoken highly of this strain, and I have pleasure in recommending it to all who grow sweet peas for the market.

Carnations Going to Sleep

Just now there is considerable complaint about carnations "going to sleep." Much has been written as to why cut carnations fail to keep as they should. The cause may have been discovered, but it is apparent that the remedy has not yet been applied.

I shall not touch upon any of the points heretofore mentioned which in every instance has dealt with the cultivation and handling of the flower before it has reached the market. In my opinion it is seldom that the grower is entirely to blame for their poor keeping qualities. As a rule it is not the cut of a particular grower that fails to keep, but when carnations want to sleep they simply sleep and don't care who grew them.

It is a well-known fact that when carnations will not last over night in a store the grower can keep those same flowers in good condition for a week or more. The carnation either cut or on the plant loves plenty of pure fresh air. This they get at the place where grown and therefore last much longer. In dark, rainy weather roses will not keep well, even though the weather was bright during the development of the bud; so are there certain atmospheric conditions which affect the carnation flower in like manner. In the impure air of a city store the effect is quick and more noticeable.

Having had considerable experience in this matter I

have found that by keeping carnations in a box outside the store they will last as long again as when kept inside. Not every store man has such a luxury as a back yard, but if he has not a rear window will answer nearly as well. Have a box built inside the window; if you need the light build it of glass. See that it is light and that the only air that gets in must come from the outside. Fasten a piece of cheese cloth at the opening to keep out the soot and dirt. You can regulate the temperature by raising or lowering the window, but do not shut off the entire supply of fresh air at any time. Try this plan with a few flowers in a simple way and you will be so pleased with the result that you will have built such a box as I have described. I do not say that this will prevent them from going to sleep in time but do claim that they will last twice as long as when kept in the usual manner.

The loss of stock is quite an item to the retail florist. It is a mistake to put everything on ice and you will find this box to be superior to a refrigerator for keeping many other flowers of which I may have more to say at another time.

Frank W. Ball

Propagating Roses

IN GENERAL AND AMERICAN BEAUTIES IN PARTICULAR.

By this time I am a little late with my notes on propagating roses, as it must have commenced before this and the propagating bench must be kept well filled for the next few weeks. Do not for a minute think that any old bench or out of the way corner will suit for a place in which to start young stock. A propagating house must be a nice, light, airy structure with plenty of heating and ventilation to which the good old saying, "Cleanliness is next to godliness" is essentially applicable. A raised bench with plenty of heating pipes under it to regulate the sand, and a heavy canvass to confine the heat under the bench, is all right. After giving the board on inside of bench a good coat of whitewash consisting of hot lime and about two handfuls of Portland cement to the pailful, we are ready for the sand. Some people have a slate bottomed bench, some a concrete and others use different material. I prefer a wood bench with two inches of rough gravel or crushed stone on the bottom, and four inches of good sharp bank sand on top of that, well watered and pounded down.

In propagating American Beauties two-eyed cuttings of good flowering wood or three-eyed of harder and more ripened wood are just right to make a good plant. Too soft or pithy wood will not root well but turn

black in the sand and if they do root they will produce what we call "black legs," and not good plants.

Temperature for sand should not vary more than two degrees and should be kept as near sixty-two as possible and with an outside or house temperature of fifty-six to fifty-eight degrees about ninety-five per cent. of them should root in from twenty-five to twenty-eight days. The cuttings should always be shaded should the sun shine on them, but if the sun's rays do not come in contact with them shading can be dispensed with entirely.

Watering cuttings is a very particular job and should be looked after with the utmost vigilance. They must not be permitted at any time to suffer for want of water. When watering do it thoroughly and as they begin to callous, which will be in about ten days after benching, you can withhold the water a little, but on no account let the sand get dry at the bottom, for should this happen your cuttings will have gone up and you will have labored in vain.

After twenty-six days of good treatment the cuttings should have made roots about half to one inch long, and then is the time to get them into pots, for the roots grow very quickly in the sand after this and soon become black and brittle and it takes more care to get them all into a two inch pot without breaking some of

them off. So pot up as soon as ready and pot firm. Don't thumb pots around the soil at the top, but get the two thumbs and two first fingers well down in the pot alongside of the cutting and with this and a pressure of the soil in the bottom of the pot you will not need to thumb the top soil at all, as that part will settle down soon enough with the watering. Give them a good watering, using a nose on the hose or watering can and shade from the direct sun for three or four days and with a light syringing overhead they will not need any more water until the roots reach the side of the pot, which will be in about four days. After that judgment can be used in watering, for some parts of the house will dry out before others. After three or four days you can get them used to full sunlight, shading only at noon for an hour or so when the sun is highest, but if "old Sol" is not in evidence any more than we here have seen him during the last month you will not need to let the shading question trouble you a bit.

At this time of the year and especially after the holidays, the plants will be pretty well cut down, and now is a good time to give them a partial rest by running the houses a little cooler, say two or three degrees, and withholding the water and feed and keeping a little on the dry side but not dry enough to check them too much, though. Don't overdo it. This will instill new life into the plants for the next half of the year.

Hoping all the readers of HORTICULTURE have had a very good holiday season's trade and with a prosperous year for 1906 before them.

Wm Scott

Echoes from England

THE EVENTS OF 1906.

The Royal Horticultural Society has arranged a comprehensive programme for the year 1906 and several new features are included. There will be no less than thirty-five exhibitions and meetings. Most of these will be the usual fortnightly shows which are held in the Royal Horticultural Hall in London. In addition to these there are many special shows, each extending over two or more days. We usually have several American horticulturists over in this country in the course of the year and the dates of some of the most important horticultural events of 1906 and a few particulars of them may be of interest.

On February 13 the annual general meeting, the scene of many heated debates in past years, will be held. There is no unusually important issue before the Fellows this year, so that in all probability it will pass off quietly. The society now has a hall and a garden of its own. The former is said to be almost paid for, while the latter was a gift from Sir Thomas Hanbury. On March 22, 23, 24 there will be an exhibition

of colonial grown fruit in the society's hall. There have been several similar ones recently, and although the colonial apples undoubtedly have the best of it, so far as appearance goes, the home grown ones have invariably been the favorites for eating. On April 17, in addition to the ordinary exhibition and meeting, the annual show of the Auricula and Primula Society will be held.

The great Temple show of the Royal Horticultural Society will be held in the Inner Temple Gardens by the side of the river Thames on May 29, 30 and 31. This is the finest flower show in the United Kingdom and the one above all that should be seen by visitors from abroad. On June 6 and 7 there is to be another exhibition of colonial grown fruit, while on June 20 there will be something quite novel, namely an exhibition of table decorations. This will be the first show of its kind ever held in England so far as I am aware, and will doubtless attract a good deal of competition and prove a great success. It can hardly fail to make a very beautiful display.

The National Sweet Pea Society will hold their annual exhibition on July 5. This is always an attractive show, although perhaps somewhat monotonous. Still it enables one to see all the best varieties of the sweet pea together and also to see all the new sorts, so its monotony may be forgiven on account of its usefulness. The Royal Horticultural Society's summer show, lasting two days, will be held on July 10 and 11. On July 24 there is the Carnation and Picotee Society's show.

An international conference on plant breeding will be held from July 30 until August 2, both dates inclusive. This promises to be an event of much significance. The National Rose Society will hold their autumn show on September 19. A show of British-grown fruit will be held on October 16 and 17, and an exhibition of colonial-grown fruit and home grown preserved fruit is to be held on December 4 and 5. The National Potato Society will hold its annual exhibition on December 13 and 14.

The National Rose Society will hold their summer show in the Botanic Gardens, Regent's Park, London, on July 5. These gardens form an ideal spot for the purpose and the show held there in 1905 was a magnificent success. Her Majesty the Queen and many other distinguished people were present. The National Dahlia Society's show takes place on September 6 and 7.

The famous Shrewsbury Floral Fete will be on August 22 and 23 this year and the great Edinburgh Flower Show is to be on September 12 and 13. That of Glasgow is on September 5 and 6, and the York Gala on June 20, 21 and 22.

These are the dates of the most important horticultural events for 1906.

London, W. C.

CATTLEYA LANCASTRIENSE.

LAELIO-CATTLEYA EROTION.

This cattleya cross was made between *C. labiata* and *C. velutina*, and with the following *L. C. Erotion* is believed to be here published for the first time, both being raised from seed and flowers here. In the raising of orchids, as with other plants, from seeds, if the operator only knew what to avoid, many years of watchful care and labor might be saved and posterity be benefited, and while *C. Lancastriense* is not one of the best ever, it is certainly worth growing, because there is great variation in individuals, one other from this pod of seed being of exceeding beauty, the one here illustrated, however, being the first to bloom a year ago, and hence the type plant.

The color in the sepals and petals is a peculiar fawn color, a mixture of yellow and pink that varies with the maturity of the flower, but the prettily veined lip is derived from *C. labiata* parent, and is at once its salvation. *Cattleya velutina* is very fragrant and this is as a rule transmitted to its offspring.

A very pretty bigeneric hybrid, the parents of which are the dwarf growing *Cattleya Walkeriana* crossed with *Laelia glauca*, the latter parent up to recently being known as *Brassavola glauca*—and this gives the beautiful large lip seen in the plant here illustrated, which, by the way, was the only one raised from the pod of seed saved and sown.

The color is a beautiful shade of rose uniform throughout the flower, the veining of the lip being especially pleasing. The scape bore but one flower, and it is probable that it will rarely if ever produce more than this, owing to its parentage. The flower has the additional merit of fragrance and lasts a long time in perfection. The seed was sown in 1898.

E. O. Orpet.

Masdevallias

The culture of these brilliant and curious orchids is interesting and should commend itself to all plant lovers. In no other genus do we find such brilliant colors, and in few such quaint forms. The genus *Masdevallia* is somewhat polymorphic and many of the species are more curious than beautiful. The bright colored species *coccinea* and its many varieties, many of which are known as varieties of *Harryana*, *Veitchiana*, *igneae*, *roseae* and others in the same section and the pure white *tovarensis* are worthy of more extensive cultivation. Their culture is not so difficult as is generally supposed. The high temperature in summer is somewhat distressing to them, especially if, as is generally the case, they are just pushing up new growths when hot weather comes. This young, tender shoot or leaf cannot live through the hot, humid July days, and generally dies back to the poor little immature bud at its base and at the apex of the rhizome, which bud cannot be so strong or able to produce so good a growth as it would if its predecessor had matured.

The object of the cultivator, then, should be to have the growths fairly well established before hot weather commences. By giving the plants more sunlight and warmer treatment in winter the second leaf of the season will be fairly well developed before midsummer.

This the writer has found to be beneficial and effectual except in the case of a few plants which were perhaps kept a little too dry in winter, thus retarding the first growth.

The English method of keeping the plants cool and dry in winter, perhaps necessary in the dull days of winter in England, is quite unnecessary and harmful here. A fairly light house, full sunshine in midwinter, a moist atmosphere, consistent with proper ventilation and a minimum temperature of 50 degrees F. are ideal winter conditions.

In summer the cool odontoglossum house is the place for them, but anything approaching a close atmosphere should be avoided. Some growers advocate closing the cool orchid house entirely during the warmest hours of the day in summer, ventilating during the night, thus keeping out the heat. The atmosphere in the house at this time is too inactive and cellarlike. A free circulation of air around the plants is of more importance than a few degrees of temperature.

James Hutchinson

A Troublesome Insect

Herewith is a sketch of two very troublesome insects as seen under the microscope together. The large hairy-legged fellow is the common red spider with which every gardener and florist is well acquainted. The small insect above it is evidently a member of the same family; can be just as harmful and being much smaller is not so easily detected. In a young state they are almost transparent and colorless, but larger specimens become a bright red and when full grown are of a reddish-brown tint over the broadest part of the body; front and back being transparent or nearly colorless. With the microscope I used I could not detect any hairs on the legs, as on the common red spider. A better instrument might disclose some.

The insects are mostly found on orchids of all descriptions, especially on *bletias*, *calanthes*, *stanhopeas*, *brassias*, *phalænopsis*, *oncidiums*, etc. Outside of the orchid family I have found them only on azaleas, but they may infest other plants for all I know. Certain it is they can do a lot of harm before one suspects their presence and even after one sees the plants damaged, he might not know the cause for the little rascals are so infinitely small as to require a powerful lens to see them. On one occasion only did I detect them with the naked eye; it was on a white flower of a *calanthe*.

The damage done by these insects varies on different species of plants. On azaleas the work shows like that of thrips, on *stanhopeas* and some *oncidiums* (*O. luridum*) like that of red spider. On *bletias*, *calanthes*, *phajus*, *peristerias* and like plants, the leaves will at first show a lot of small, watery-looking spots which ultimately turn black. On some *epidendrums* and *brassias* the leaves show at first the usual grayish discoloring caused by red spider on other plants, but in time the leaves will be covered with black spots. On *phalænopsis* the leaves show at first small watery spots, which gradually grow larger, swell up like a blister and take on a yellow or sometimes purplish color until they finally seem to collapse and dry up, leaving deep depressions on both sides of the infested leaf and in some cases even on the flowerstalk.

For a long time I was at a loss to account for those spots on the *phalænopsis* leaf. I attributed the trouble to thrips at first but search as I may I could not find one single thrips on any plant. A cold chill might do the harm, but then all plants ought to have been affected, anyway I tried to prove this latter theory, but failed to cause any leaf to get spotted by giving the plant a chill. Now I know it is these little spiders who do the harm for I have found them on the leaves after a long and careful search.

It is a hard insect to get rid of. Tobacco smoke, fumes of Nicotine or Nicotidine have no effect on it. Sponging with warm water and Ivory soap is probably the only way to keep them down, outside of hydrocyanic gas. I am going to try this on them and hope to get

rid of all other vermin at the same time—perhaps of a good many plants, too. Should any of your readers be better acquainted with this little job I should like to hear about it.

Grape Vines Under Glass

From now on grape vines will require all the attention they can possibly receive. After the vines are pruned, if mealy bug is at all bothersome, all the loose bark should be scraped off, using the finger nails and a dull knife for the purpose, and the vines then washed with soap and water, using a brush with vehemence on all parts, but being careful not to injure the eyes of the vines in the operation. At this stage the vines may be left alone until the house has been thoroughly cleaned and painted. In washing the woodwork of the grapery before painting put a little kerosene in the soapy water and see that some of it gets into every nook and corner in order that resting mealy bugs may be rudely disturbed in their retreat. When the house is clean give one or more coats of paint to all the wood work. White paint is the best kind for the wood as a preservative and white is the best color from a horticultural point of view. Before an attempt is made to start the vines into growth the border inside the house will require to be gone over carefully and all the surface soil removed. As this has to be done without injury to the roots the work can be better accomplished if a wooden peg is used to loosen the soil for no matter how carefully a man may handle an iron digging fork, there is a liability to injure the roots more or less. Provision should have been made before now to have the soil and manure for replenishing the border under cover that it may be available and in good condition for use when required. The safest material to use right over the roots of grape vines is pure fibrous turf and then over that some of the same material chopped with a spade and mixed with broken bone or bone meal and cow manure; by some it is considered well to have the cow manure near the surface for several reasons.

If the border is all ready it will be well to paint the vines with a thick solution composed of one pound of whale oil soap, one small wine glass of kerosene, a quarter pound of hellebore powder, to about a gallon of water. This solution is thickened by adding enough yellow clay and cow manure in equal proportions to get it the thickness required; it ought to be just thick enough that a thin coat will remain on the vines.

It is generally recognized that it is better not to water the vines at the roots until the border has been warmed somewhat by a slightly higher temperature, but when water is given it should be given in such a quantity that it will reach all the roots and be evenly distributed over the border. No harm can, and, possibly, some benefit may ensue if the vines are tied down so that their tips will not be more than three feet higher than the border. This may help to cause the vines to break more evenly. In the frequent syringing necessary at this stage it will be well to use as fine a spray as possible in order to avoid saturating the soil with water. A temperature of 45 to 48 degrees is high enough to start with when fire heat is used.

David McIntosh

The Bertrand Grape

The accompanying photograph is of a cluster of the Bertrand grape that originated in middle Georgia and is supposed to be a seedling of the Herbemont, a grape that it very much resembles in quality and the immensely-shouldered clusters. The history of the Herbemont, though somewhat in doubt, is very interesting. Prof. T. V. Munson classifies it as *Vitis Bourquinina* and says of it: "It was brought to Savannah, Ga., (I am credibly informed) by a Huguenot family by the name of Bourquin from Southern France over one hundred and fifty years ago; the vines sent me by Gougie Bourquin of Savannah are direct descendants of the original vine in the Bourquin gardens and prove beyond question in several years fruiting on my grounds that they are identical with the Herbemont. On the other hand the Bushberg Grape Manual says of it, "Origin unknown; as early as 1798 it was propagated from an old vine growing on the plantation of Judge Herger, Columbia, S. C. Nicholas Herbemont, an enterprising and enthusiastic cultivator of the grape, found it there and from its vigorous growth and perfect acclimation, at first correctly supposed it to be a native. He afterwards, in 1834, was told that it had been received from France and believed this, but the same grape was also found growing wild in Warren County, Ga., and is there known as the Warren grape."

The best authorities class it as a member of the southern *Aestivalis* family, a native grape, truly called by Downing "Bags of Vine," one of the very best and most reliable grapes for both table and wine. Judging from its many foreign characteristics, the numerous branches of its clusters, small seeds, and vigorous growth, I am inclined to side with Munson in regard to its origin. It would seem to be very easy for it, by the aid of birds, to become scattered and be found wild in such a place as Georgia. The writer is especially

interested in this grape, as a basis for experimental work, and the cluster from which the photograph was taken was thoroughly pollinated from a grape that produces clusters fifteen inches long. The original of the photograph was 15 1-2 inches in circumference and had 291 berries on it. Such a combination should, to say the least, produce some magnificent clusters, and ripen in New England. The combination is composed of six different species, viz., *Vitis Bourquinina*, *Labrusca, vulpina*, *Lincicumii*, *rupestris*, and *vinifera*—five of our best native species and one foreign—just foreign blood enough to give quality without injuring the hardiness of the offspring.

R. B. White

Browallia speciosa major

This is an exceedingly effective and cheerful winter-flowering subject; for that matter it is in flower all the time, but its large violet-blue flowers are more conspicuous in the dull winter months, on account of the dearth of rival subjects in that color at that period.

The requirements of this plant are very simple and any ordinary treatment will suffice to attain good results. It succeeds best in a greenhouse temperature ranging from 50 to 55 degrees. Best results are obtained by growing it annually from seeds, sown somewhat early,—say in February. The same routine business that ensures success in handling other similar subjects applies to the one under notice; namely, timely transplanting with the necessary timely repotting.

It varies greatly from seed in habit of growth and size and intensity of color in flower. It would be therefore labor well-spent on the part of those that grow this lovely plant, to be on the *qui vive* for improvements along the line, and whenever such are detected to perseveringly and intelligently bend their efforts to further improvements. This can only be accomplished by following well recognized rules, one of these, if the improvement is carried forward through the medium of seed-selection, being that the plant or plants to bear the same, must be isolated sufficiently early to preclude the possible tampering of inferior varieties with the better variety. This line of work must be scrupulously followed for a number of years to arrive at a stage where a likely reasonable measure of success is to award the effort.

I said that best results are to be obtained from plants raised annually from seeds; that plants can be easily raised from cuttings I am well aware, but I have found the latter invariably to assume a more woody and wiry nature, resulting in smaller and less brilliant flowers. However, I have seen good returns from one-year-old plants severely cut back and planted out in early summer, thereafter lifted in the usual way in the fall, big plants being the reward of such treatment.

I would add that to obtain shapely, bushy plants, frequent pinchings of the young growths must be attended to in their earlier stages. I would also consider this subject to be essentially a day and home decorative plant. Day—as its color does not shine out under artificial light, appearing mauve or lilac; home—as it does not take kindly to rough transportation handling.

Sports versus seedlings

It has been suggested, in view of the increasing frequency of "sports" among carnations, that thrifty growers may yet find it expedient to confine their list of varieties under cultivation to the sports of such sorts as have proven valuable under their especial conditions of soil, atmosphere and treatment. Such a course would certainly reduce the element of doubt and speculation to a minimum but would hardly compensate for the sacrifice of the delight of testing new things.

Burbank and his critics

Within the last few weeks there have come to us a number of communications, a few fulsomely laudatory, but most of them attacking severely the alleged accomplishments and claims of Luther Burbank, for which we have found no room in our columns. To the best of our knowledge HORTICULTURE was the first paper to turn the light on some of the absurdities of the Burbank pedantry and we do not feel called upon to vociferate in the chorus of criticism now in progress. The lesson impressed upon us is that no man, however clever can afford to override and trifle with the good opinion of his fellow craftsmen. It seems inexplicable that Mr. Burbank did not foresee that, while the public might be Barnumized to the limit, those in his own profession at home and abroad would sooner or later record their disapproval. One ringing, straightforward disclaimer of responsibility for the silly exaggeration, from him, might easily have turned the tide, but it was not forthcoming.

Knowing why and wherefore

We had the pleasure recently of a trip through the carnation houses of the Cottage Gardens Company under escort of Mr. Ward. It was an experience full of absorbing interest, not alone because the stock was in superb shape, but particularly because of Mr. Ward's pertinent observations on each variety, its history, parentage and promise: the reasons for

this or that conformation or habit, the influences traceable back through its lineage—all calculated to stir one up to a keen appreciation of the deeper phases of carnation crossing and culture. It is a good sign of any industry when its followers show a disposition to investigate systematically and carefully classify and record results and are able to demonstrate in a lucid manner how these results have come about. Only in proportion as we acquire ability to discriminate between the crude and often erroneous conclusions thrown out by haphazard experimenters and the mature results of careful investigation made in special lines by expert and studious men, can we expect substantial advancement in any art.

Poinsettias after cutting

Commenting on a recent communication in HORTICULTURE on the best method of handling poinsettias so that they will keep well after being cut, A. H. Lange of Worcester, Mass., states that he finds the best plan is to cut the heads with stems two feet or more in length and to plunge them in hot water immediately, to a depth of fully 18 inches. The water can be as hot as 90 degrees and its effect is to dissolve the gum as fast as it exudes from the stem, so that by the time the water has cooled off the stems are entirely freed from the gum. On the following morning the stems are put in ordinary hydrant water in a cool cellar or other place where flowers are usually kept and after 24 hours more they will be in condition to stand up well in any decorative work for which they may be required. Mr. Lange says further that it is his custom to attach a tag to all growing poinsettias in pots or pans before delivery to customer, on which the buyer is instructed to keep the plant in a warm place and give it an abundance of water.

Increase the duty on nursery stock

How does the present tariff on ornamental nursery stock affect the welfare of the American nursery and florist trade? It is the expressed belief of many who are well-situated to form a valid opinion that the duty on these goods imported from abroad is much too low, and the American Rose Society has so expressed itself as to the tariff on roses especially. Not only are the foreign roses sold at prices which American growers are unable to meet, but a large proportion of them are so lacking in hardiness and other essentials that their dissemination is a continual menace to the growth of garden-love, buyers in their ignorance of the reasons for failure being discouraged by their lack of success from further attempt at horticulture. It is maintained that the imposition of a heavy specific duty would tend to the exclusion of undesirable, low grade material and place the cost of well-grown imported stock at a level which would protect the American grower and open a home market for his products at an adequate price. It is well known that Germany is about to impose practically prohibitive duties on this class of goods and it is a foregone conclusion that the material thus repulsed will seek outlet here. As Germany buys annually many times as much as America has been buying the eventual effect on the American nursery business is not hard to foresee. The issue calls for vigorous action on the part of the nursery trade of this country.

AFTER ADJOURNMENT.

Guttman & Weber report advance orders for their scarlet carnation Victory, aggregating 200,000 up to date, a sterling tribute to the flower itself and the enterprising manner in which its merits have been given publicity.

Fresh magnolia branches with rich glossy foliage are among the nicest things in the green line carried in stock by the Kervan Company, New York. For decorative effect, in artistic hands, they have no superior.

Double flowering peach, white and pink, apple blossoms and lilacs are among the most attractive novelties seen in the windows of New York florists. These things make a window display which demands notice from the passer-by.

The New Jersey State Horticultural Society has again voted, at its 31st annual meeting, to advocate legislation permitting the destruction of the robin by the fruit growers. A much more general approval is likely to be given their vote in favor of a parcels post and for the discontinuance of discrimination in freight rates against eastern fruit growers. Bird destruction is not popular now-a-days.

On account of the high commercial tax now imposed upon all traveling salesmen entering Canada, large American houses are withdrawing their representatives from that territory, as the prices charged for goods cannot cover this additional cost. Canadian buyers will find our advertising columns especially useful under these circumstances and, ordering by mail from the advertisers found therein, can depend upon careful consideration of all business so transmitted.

The Rural New Yorker is doing some telling work in agitating the parcels post matter and the communications from some of its readers indicate that gratifying progress is being made in awakening public sentiment in favor of this much-needed reform. One writer in the issue of Jan. 13 shows how for the sum of ten or twelve cents packages of considerable size may be sent by parcels post from London to Jerusalem! Jerusalem, with all her misfortunes, has evidently thus far eluded the express monopoly. Americans have yet something to learn from old world ways.

We notice that the esteemed "correspondent of a western paper" has transferred his masterly handling of the S. A. F. and its "proposed exhibition," the "censorious editor" and the "Boston people," to the roomy columns of an eastern contemporary. Would briefly say, with all due respect to our friend Craig's contrary opinion, that we still think we are fairly familiar with Boston sentiment and able to speak for Boston as a Boston man, even though we were deprived of the liberal education in this respect provided for those who were present at the momentous Gardeners' and Florists' Club meeting in ques-

tion. Perhaps Mr. Craig will be willing to give us a chip from the store of knowledge emitted on that occasion and tell us who it was that flung the bugaboo into the meeting, and what the motive behind this attempt to lure a fair-minded, honorable body such as the Gardeners' and Florists' Club of Boston into the discourtesy of a premature discussion and recorded condemnation of the alleged plans of a friendly society before any communication had been transmitted by that organization or any official public announcement made.

"May go out for wool and come home shorn themselves."

According to The New York Tribune, Bronx Park has a "plant hospital." The "plant doctor," a Mr. E. A. Costain, it appears, entertained The Tribune reporter with a full column dissertation on plant life, plant diseases and plant medicines, as he followed him on his rounds among his "patients." We read that:

"Among the patients treated were the feather palm, parosol, bamboo, Bungalow, blooming cane broom, fern, jaguar, royal, fan, umbrella and Bourbon. Some of these palms were drooping and fainting like the sick after a long, hard night of nerve racking pain. The Bourbon was in a state of complete nervous prostration; the feather looked rheumatic, its offshoots curled up and knotted; the fan had some pulmonary trouble, and many of the others were victims of indigestion, being unable to relish their food. A warm bath, a sponging with oil, doses of plant medicine, changing of position and a loosening of the earth around made them more comfortable. In a short time it needed no imagination to see that they felt much better and were on the road to recovery."

The "doctor's" plants may be sickly, but there is evidently nothing the matter with the digestive apparatus of The Tribune's readers.

The old epidemic has apparently struck in on The New York Sun, also. Its representative has had an encounter with a "Broadway florist." According to the interview, which occupies a full column, for which any legitimate enterprise would have to pay dearly, we learn that:

"Carnation Aristocrat was sold by a Cincinnati firm to the Carnation Association of Joliet, Ill., recently, but the association will have no trouble in getting its money back.

"It will get it back in one season. You see, they will sell the first shoots for \$5 apiece. They'll have about a thousand of them. Then the shoots will be doubled and tripled and quadrupled and they'll sell them all for \$5 apiece.

"It is unusual to grow anything very wonderful in the way of a carnation in this country. That was probably what raised the price of the Aristocrat. Carnations grow much better in England.

"There seems to be a fad for rare carnations among many rich people. I have known people to pay fabulous prices for rare carnations and never let them go out of their greenhouses except for presents to their friends.

"But as to the way flowers take to different countries. There is the American Beauty rose. They can't grow that in England at all. It refuses to take root. They have tried it again and again and failed. Yes, I suppose that is the reason they are called American Beauty roses. It suits them best to grow here.

"That amaryllis you see in the window, grows best on the Pacific coast. That one didn't, of course. It was grown in a greenhouse. Yes, it is beautiful. It is almost impossible to believe it could be more beautiful unless you saw it trailing along on its native heath. It is a thing to look at there."

A town that can stand for that will stand for anything, even tin horns and rattles on New Year's eve!

OUT OF THE BEAN POD.

So much hot air has been used in Boston's recent political battles that it may have had a tendency to keep away the cold weather and give the florists a chance to keep down the coal account, but things have gone down to their normal point and the spring-like weather cannot last much longer.

The coming of the Carnation Society to Boston excites much interest amongst the craft here, and the good fellowship for which Boston is noted will be freely extended. But President Fisher should have put the executive committee wise in the selection of the date, for on the 25th of January the weather man usually hands out one of his best samples of winter, but the president may get on the right side of that gentleman and prevail on him to give us a moderate dose. Possibly he had in mind that this will be the day so dear to all Scotchmen, the anniversary of the birth of "Robbie" and I shouldn't be surprised if he had tickets bought in advance to give his co-workers a chance to worship at the shrine of the illustrious bard.

Be that as it may, let us all welcome the coming of the American Carnation Society and we all hope that the weather will be such that the public will be given a chance to see the exhibition. At the same time it may not be out of place to add that none of us has any patent rights in the growing of our specialties. No society or member of a society can afford to be arrogant or try as individuals to bring about antagonisms between different societies. Most of us gain our daily bread from a specialty and are trying to work out plans which will bring that specialty to a higher plane. In some lines results are more quickly achieved than others, but let none of us in the flush of victory think that others are less industrious than ourselves. The path in some lines has been very difficult to climb but there have been brave-hearted men who have given their time and money freely to overcome obstacles that have seemed insurmountable. The late Edmund M. Wood was one of these men, and in him Boston and the entire country lost a man who did much for the particular industry for which he had a great love. Were he alive today both the American Carnation Society and the American Rose Society would have had a warm welcome from a friend of both.

HORTICULTURE A BUSINESS GETTER.

Under the remark, "You see HORTICULTURE reaches beyond the United States," an advertiser sends us an inquiry received from England. This is suggestive to those who are looking for a wider market for their products.

PERSONAL.

Frank L. Sterling, nurseryman, was married on New Year's day to Mrs. Martha McLain.

Thos. H. Meade severed his connection as travelling man with Jos. Breck & Sons' Corporation January 1.

NEWS OF THE CLUBS AND SOCIETIES

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The first meeting of the new year was held on Tuesday evening, January 16, with an attendance of over one hundred members. President Wheeler made a brief address of congratulation on the prosperity attained, and gratitude for the support accorded him during the past year. He emphasized the importance of individual activity as compared with the value of mere numerical strength, advocated the encouragement of the recreation features of the club's work, referred briefly to the preparations which are perfected for the coming carnation convention and set a shining example for his fellow-presidents all over the country by thanking in appreciative words the representatives of the professional papers for their share in promoting the welfare of the organization.

Vice-president Westwood, Secretary Craig and Treasurer Hatch also responded to the call and spoke a few words. Mr. Craig advocated the establishment of some system whereby positions might be found for worthy members out of work and deprecated the insidious encroachment of the landscape architects on the gardeners' domain. Mr. Hatch's dissertation on thriftiness was pointed and impressive.

Mr. A. Patten gave an interesting resume of the carnations of the past and was followed by Peter Fisher, who presented the interesting paper on the carnation of the future, which appears on another page of this issue. In the discussion which followed Mr. Fisher told of investigations he is making on the subject of cross-relationship and intermingling of blood in carnation raising and its effect in the tendency of certain varieties to sport. This subject brought out interesting remarks from a number of members. Mr. Fisher also told of the apparent effect of fumigation in causing carnation flowers to go to sleep in a short time after cutting, and said he had found the use of Nicotine a great improvement, the flowers keeping much longer. He advised growers to try Nicotine. A general exhibition committee was appointed with Alexander Montgomery, Peter Fisher and Robert Cameron chairmen of the rose, carnation and general plant sections, respectively. The project to refer applications for membership to the executive committee before action by the meeting was voted down. Sixteen new members were elected. The application of a lady for membership brought out a spirited debate and a negative vote, which was afterwards reversed, but the sponsors for the lady withdrew the name. Altogether it can be said that gallantry was not rampant on this occasion. An invitation to attend the banquet of the North Shore Horticultural Society at Manchester on February 15 was presented by W. B. Jackson and accepted.

On the exhibition table were some

fine carnation displays, including Evangeline (light pink) and Beacon (red) from Peter Fisher, a white seedling from T. F. Matthews, Helen Goddard from S. J. Goddard, sport from Enchantress and several seedlings from Backer & Co., seedlings from Stevens & Co., Pink Patten and Mikado from Patten & Co.

PHILADELPHIA COUNTY FARMERS' INSTITUTE.

Unlike the regular farmers' institute in the country districts the Philadelphia affair generally has an element of horticulture and floriculture injected into it. This year's meeting, held at Horticultural Hall on the 16th inst., was no exception to the rule. Antoine Wintzer, of the Conard and Jones Co., gave a very interesting talk on hybridizing, Dr. Roberts delivered his much-looked-forward-to lecture on the influence of flowers in the sick room, and J. Otto Thilow spoke on grasses for lawns and other purposes. These lectures were in addition to the regular lecturers of the Department of Agriculture.

Carnation Robert Craig was on exhibition from the Cottage Gardens, besides Begonia Lorraine and a number of other items for the monthly prizes of the society. Henry A. Dreer made an elaborate exhibit of insecticides and tools.

The most interesting of the papers have been secured and will be published as soon as circumstances will permit. Altogether this proved a very successful institute. Edwin Lonsdale presided, ably seconded by David Rust, secretary of the Horticultural Society.

AMERICAN CARNATION SOCIETY.

Carnation Registered.—By George B. Anderson, Hyde Park, Mass. "Red Warrior," a bright scarlet, very free bloomer, strong grower, average stem at this time eighteen inches, blooms three to three and one-half inches. A cross between Mrs. Lawson and Mrs. Bradt.

The Boston Meeting.

The paper on Carnations from a Wholesaler's Point of View will be given us by Mr. A. J. Guttman, New York, N. Y.

The New England Passenger Association have granted the rate of a fare and one-third for the meeting over all of their lines excepting The Eastern Steamship Company.

Your Secretary has made application at the same time to the Trunk Line Association and the Central Passenger Association for the same rate, and it will no doubt be granted. Parties coming to the convention should give themselves plenty of time to buy their ticket and get the usual certificate from the ticket agent at their home office entitling them to the reduced fare.

There will be more flowers staged in Boston, Jan. 24th, than have ever been staged at one time and place in the world, and every Carnation man who can should attend this meeting.

ALBERT M. HERR, Sec.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Dr. L. O. Howard, chief of the bureau of entomology in Washington, lectured on "The Possibilities from Insect Parasites," illustrated with stereopticon views, at Horticultural Hall last Saturday.

The lecture consisted of a careful historical summary of all of the work that has been done in different parts of the world with the practical handling of the insect enemies of injurious insects, starting with the first attempt in 1855 by Dr. Asa Fitch, then State entomologist of New York, to import the European parasites of the wheat midge, and closing with the present attempt to import into New England the European and Japanese parasites of the gypsy moth and brown-tail moth. The excellent work carried on in California in this direction was described at some length, from the first overwhelming success of the importation of the Australian ladybird in 1889 to destroy the fluted scale, down to the latest importation of an ichneumon fly from Spain, which is a parasite of the codling moth of the apple. The work done in Hawaii, in Western Australia, and in South Africa received due attention, and the similar work carried on under the United States Department at Washington, naturally, was not disregarded.

With regard to the gypsy moth and brown-tail moth, he expressed himself as hopeful of success. He described in some detail his last summer's trip to organize the work of importing parasites of these two insects, and stated that it was difficult in very many localities to find any specimens at all of the gypsy moth, although it is well understood that in almost any year it is liable to appear in considerable numbers. The work of last summer showed that it was an easy thing to import parasitized specimens of both species into Massachusetts, and it now remains simply to bring over as many as possible and to care for them as well as possible, in the confident hope that some of them will establish themselves and become permanent denizens of the United States. Surely, with the extraordinary abundance of food which they will find in eastern Massachusetts, there can be no reason, unless it be climatic, why they should not breed rapidly and eventually reduce both the gypsy moth and brown-tail moth to approximately European conditions.

The 1906 schedule of prizes and exhibitions is issued. In the general arrangement it follows closely that of previous years. There are to be thirteen exhibitions, one less than in 1905, and a further reduction of the weekly Saturday summer shows is made by cutting out two in August, so that this year there will be two in July and two in August. An additional two days' exhibition in October is established exclusively for the fruit and vegetable interests.

Five hundred and seventy-four entries of mostly three prizes each are offered in the several departments of

plants and flowers, fruits, vegetables, and gardens, covering a total amount of \$6,700, an increase of \$200 over the preceding year.

Several changes in the rules and regulations are to be noted, especially those relating to commercial exhibitors, who are to receive more encouragement under the new rules than they have had in the past. An important notice to exhibitors, requesting the filing of a list of their exhibits, is also a step in the right direction.

Included in the society's schedule are the lists of premiums offered by the American Carnation Society and the American Rose Society, which are to hold their annual meetings and exhibitions at Horticultural Hall, Boston, on January 24 and 25 and March 23-25, respectively. Copies of the schedule may be had on application to the secretary, Mr. W. C. Rich, at Horticultural Hall, Boston.

NEW YORK FLORISTS' CLUB.

The following resolutions were passed at the club meeting, January 8, 1906:

Whereas, death has removed from us Mrs. Hannah Holmes Allen, wife of Charles Linnaeus Allen, seedsman, Floral Park, and mother of Charles H. Allen, a former president, and William Stuart Allen, a former secretary, of this organization, therefore be it

Resolved, That we tender our most sincere sympathy to the aged husband, whose help-mate the deceased was for these more than fifty years, and to her sons, our brothers in the craft, in their great bereavement.

The life of Mrs. Allen typified the highest and best womanhood. To know her was to love her, and those who knew her best, loved her most. Delighting in all nature, she was passionately fond of flowers, and those of us who were privileged to visit her pleasant home at Floral Park, were deeply impressed with the responsiveness with which every plant and flower cultivated by her yielded to her tender care and attention; they seemed to grow and blossom at her very touch. Frank, generous, hospitable, and kindly in all her actions, Mrs. Allen will be sadly missed by a host of friends; but those who mourn her passing away should take comfort in the fact that her beautiful character demands of us to say truly of her, as was said of the ideal woman of old, "Her children and her children's children shall rise up and call her blessed."

Resolved further, that these resolutions be spread upon the minutes of our Club, and a copy sent to the family of the deceased.

(Signed) ALEX. WALLACE,
PATRICK O'MARA,
WM. J. STEWART.

PASADENA GARDENERS' ASSOCIATION.

At the meeting held on January 5, officers were elected as follows: President, A. T. Hanson; vice-president,

John Blake; secretary, Herbert E. George; treasurer, P. W. Jennock; sergeant-at-arms, E. Hurny. The society now numbers 37. At the next meeting a talk on Insects and Scale will be given by C. A. Day, horticultural inspector.

At the annual Carnival of Roses on New Year's day, this association exhibited a float representing a miniature flower garden. At the entrance was an arch of vines; in the centre was a lawn made of Ficus repens, in which were a bed of roses and asters, pink and white, and one of white carnations surrounding a bonaparte. The sides of the float were decked with pink and white carnations and geraniums; kentias were at the end. White marguerites and English ivy covered the wheels. The float was drawn by four white horses with pink trappings. (See illustration.)

H. E. GEORGE.

H. H. RITTER.

We take pleasure in presenting the portrait of H. H. Ritter of Dayton, O., who has been appointed director of the S. A. F. to succeed H. M. Attick. Mr.

Ritter's photograph did not reach us in time to appear with the portraits of the other appointees published last week. Mr. Ritter is a worthy representative of the section which has been so constant in its support of the society from its inception, and President Kasting has shown excellent judgment in his selection.

NEW BEDFORD HORTICULTURAL SOCIETY.

The officers for the ensuing year are as follows: President, Wm. Keith; vice-president, F. C. Barrows; treasurer, Wm. A. Gibbs; secretary, J. C. Forbes; executive board, James Garthly, C. A. S. Sherman, J. McVicker, E. E. Shaw, A. H. Peters.

ST. LOUIS FLORISTS' CLUB.

At the meeting on Jan. 11, twenty members were present. The by-laws were read for the second time. Charles

Beyer gave an interesting talk on "Forcing Plants for Easter"; John Steidle spoke of his recent visit to the Chicago growers, of the fine carnations and roses, especially Killarney, that he saw; F. W. Burrows spoke entertainingly on wild smilax, how it goes and is shipped.

A motion was made to make the next meeting a carnation meeting, and to offer \$25 in prizes, as follows: Best 25 white, 25 light pink, 25 dark pink, 25 variegated, 25 red; first prize, \$3; second prize, \$2 in each instance.

The question of holding a flower show this year was laid over. Mr. Kellogg of Pleasant Hill, Mo., was a visitor.

PROVIDENCE GARDENERS' AND FLORISTS' CLUB.

The tenth annual dinner of this prosperous organization took place at the Hotel Newman, Providence, R. I., on the evening of January 12. Upwards of fifty gentlemen were in attendance. A brief business session preceded the banquet, J. F. Schellinger presiding. W. E. Chappell was appointed toastmaster and took charge of the after-dinner exercises in his usual able manner. Among the speakers and their topics were William Hill, on the profession of the gardener; C. S. Macnair, on carnations; J. B. Canning, on carnations; John A. Macrae, Alexander Macrae, on the use of electricity in plant forcing; T. F. Keller, James Hockey, H. Leach, A. M. Rennie, W. S. Pino, Robt. Johnston, M. Sweeney, D. E. Newell, H. Patry, W. B. Wilson, Wm. Appleton, T. J. Johnston and Edw. O'Brien. C. A. Bellows of Adamsdale Mass., was a visitor.

KENTUCKY SOCIETY OF FLORISTS.

At the last meeting of this society the following officers were elected: President, Anders Rasmussen; vice-president, August R. Baumer; secretary, Fred L. Schulz; financial secretary, Louis Kirch; treasurer, C. H. Kunzman; sergeant-at-arms, Joseph Wettle; trustee for three years, W. Susemichel.

The Florists' Bowling Club held its regular meeting on the 9th, with a good attendance.

CLUB AND SOCIETY NOTES.

The Monmouth County Horticultural Society held its second annual banquet at the Sheridan Hotel, Red Bank, N. J., on January 11.

The Tarrytown Horticultural Society held its seventh annual dinner at the Florence Hotel, Tarrytown, N. Y., on Wednesday evening, January 17.

The first farmers' institute of the winter by the Marshfield (Mass.) Horticultural and Agricultural Society will be held Jan. 20. Gypsy Moths will be the subject. President Thomas W. Lawson will occupy the chair.

The annual dinner of the New York Florists' Club will be held on Saturday evening, February 3, at the St. Denis Hotel. The usual joyous program is promised. Apply for tickets to W. F. Sheridan, 39 West 28th street, New York City.

CARNATION WINSOR.

Our illustration shows a carnation house of the F. R. Pierson Company at Scarborough, N. Y. This magnificent structure covers an area of half an acre and contains about 20,000 plants. The three middle benches, as shown

in the picture, are occupied by Winsor, a new carnation which has evoked unbounded admiration wherever shown. The flower strongly resembles the Lawson in form and other characteristics, but the color is that rich

satiny pink long-sought and rarely attained by the hybridizer. The wonderful productiveness of the variety is well displayed in the illustration, as is its vigorous, healthy growth. It will take high rank in the Boston show.

OUR SUPPLEMENT.

The accompanying colored plate shows the *Nigella* Miss Jekyll which is being distributed by Messrs. Sutton and Sons. *Nigella damascena* is a very popular flower in English gardens. Few plants have so many popular names as the *nigella*, some of them being "Love-in-a-Mist"—the most familiar,—"Devil-in-a-Bush," "Fennel Flower," "St. Catherine's Wheel," and "Bishop's Wort." Most of these names derive their origin from the curious and quaint appearance of the pale blue flowers surrounded by the leafy involucre. *Nigella damascena* is a native of South Europe and was introduced from there in 1570, so that it is a very old inhabitant of European gardens. The typical *Nigella damascena* is a plant some 18 inches high, of erect branching habit with pretty fennel-like foliage and a pale blue flower peeping out from its leafy surroundings at the end of each shoot. The value of "Love-in-a-Mist" does not lie in the flowers alone however, for the latter are succeeded by curious horned carpels, which are decidedly ornamental and which give to the flower one of its popular names, "Devil-in-a-Bush."

There are many varieties of *Nigella damascena* in cultivation, some with white, others with blue-purple and double flowers, but the finest of all is undoubtedly *Nigella* Miss Jekyll shown in the colored plate. It was raised by and named after Miss Jekyll. This variety gives an abundance of long-stemmed flowers which are of a clear corn-flower blue prettily set in slender foliage. The plant is perfectly hardy and an autumn sowing out of doors produces even finer specimens the following summer than seeds do that are sown in the spring. *Nigella hispanica* is a beautiful plant with large handsome deep blue flowers, having blood red stamens. It is a native of the fields of Southern Spain and North Africa and is quite as hardy as the common Love-in-a-Mist, while it comes into flower earlier. It has been in cultivation since 1629, but it has never become so common in gardens as *damascena* probably because it is not quite so hardy and its culture gives rather more trouble. In all gardens where the Love-in-a-Mist is grown the new *Nigella* Miss Jekyll will doubtless soon become a great favorite.

G. C. WATSON PAYS HIS RESPECTS TO "PHIL."

Jno. Welsh Young hails me as the "junior member" of the horticultural press. John is hereby informed, if he does not already know, that I was divesting myself of more or less serious horticultural literature when he was stealing apples in knee breeches! John means well, but he talks on the spur. Any old bluff is accepted by him as the most serious proposition, and the boys, confound them, take advantage of that fact and abuse things! Such is John's naivette, ductility and resilience, however—he instantly converts it all into news of the finest water; and not only that, but he manages to get it printed too! Here's a health to you, John! Your continued presence in the horticultural arena is an enduring charm and contributes wonderfully to the gaiety of nations. But, seriously, John, did you ever try to tincture a glass of desire with a dash of discretion? I have. It's not a pleasant drink, but it does one good afterwards.

THE E. G. HILL CO., - - Richmond, Indiana

BOOK REVIEW.

"The First County Park System," by Frederick W. Kelsey.—"The First County Park System" is an authentic and graphically written history of the Essex County, New Jersey, public parks, now one of the most important park systems in the country. The author, Mr. Frederick W. Kelsey, was a member and vice-president of the first board of five commissioners selected to lay out the parks. He formulated the plan which was the basis of the subsequent legislation to provide for the park system, for which the first appropriation was \$2,500,000. He is probably more familiar with the inception and workings of the enterprise than any other person, and from his intimate knowledge of events is recognized as being especially well qualified to write this history. To the forcibly written narrative of events is added the interest of personal touch and experience.

The book covers a period of ten years, from the first inception of the enterprise to the practical completion of some of the parks, and to date. It tells how both public opinion and legislation favored the project, and how these favorable conditions continued until the blighting influence of special interests became potential factors in the undertaking. It gives much information as to other park organizations, from Boston to San Francisco, and makes some concise recommendations of practical application to all park departments and other boards transacting public business.

The facts are concisely and interestingly presented, and the volume contains most valuable information, not only for creating and laying out new park systems, but timely suggestions for those already established.

The book is beautifully illustrated with ten full-page half-tone views of the different parks, and a County map in colors, showing at a glance the parks and proposed parkways.

This is a very handsome volume,

The photograph herewith reproduced shows the plant exhibits in Manatee county booth at the recent State Fair and Mid-Winter Exposition at Tampa, Florida, in which Reasoner Bros. were the largest contributors and received all the first and fourteen minor prizes. The neat bamboo work was made from bamboo taken from some clumps of *B. argentea striata*, which have been in the Reasoner nur-

series for over twenty years. The fair was a great success for the State and was visited largely by home-seekers and tourists, among them some of the prominent northern florists, who seemed surprised at the extent of the show. The exhibits of fruits and vegetables were extensive and very educational, showing what is being raised regularly in Florida.

A HANDY SOUVENIR.

Kroeschell Bros. Company, 35 Erie street, Chicago, are sending out to all who apply with a two-cent stamp that convenient carnation measure which was so well received by the carnation enthusiasts last year. It is a simple and yet exact gauge with which you can tell the size of a flower. Send your address with stamp and get one.

and is printed on heavy laid paper; large 12mo; 300 pages; handsomely bound in cloth. Price, \$1.25, postpaid. The J. S. Ogilvie Publishing Company, 57 Rose Street, New York, publishers, will send it by mail, post paid, to any address on receipt of price, or it may be ordered from HORTICULTURE.

QUEEN BEATRICE

The new rose Queen Beatrice is a sturdy child of Liberty and Mme. Chatenay, raised by Peter Bisset, of a fine pink color and excellent commercial qualities in all particulars. F. H. Kramer of Washington, D. C., pur-

MCKINLEY DAY.

The Committee on McKinley Memorial for the American Carnation Society and Society of American Florists and Ornamental Horticulturists calls the attention of all florists in the United States to the nearness of the anniversary of our late President's birthday, January 29, 1906, "McKinley Day," when millions of our citizens will wear a carnation as a silent tribute to his memory. The committee has prepared a suitable display placard with a splendid likeness of President McKinley, announcing this anniversary, and showing the action of the florists in the building of the National McKinley Memorial at Canton, Ohio, the late President's home. This display card cannot fail to remind many

people of this custom who otherwise might overlook the date. Upon receipt of any contribution of \$1.00 or more to this fund, or a pledge to contribute 10 per cent. or upward of the carnation sales on January 29, 1906, the committee will mail to the contributor this display placard.

Address: H. M. Altick, Chairman, Dayton, Ohio.

The Herendeen Manufacturing Company of Geneva, N. Y., held a two days' business convention last week, which closed with a banquet at the Kirkwood House, at which about seventy guests were present. F. A. Herendeen was toastmaster; Mayor Rose extended a cordial welcome to the strangers. Such affairs do much to strengthen the relations between a growing house and its representatives.

ALFRED DIMMOCK.

As announced in our advertising columns, Alfred Dimmock has severed his connection with the firm of F. Sander & Sons and has accepted the European agency for the Yokohama Nurseries, under the direction of Messrs. Suzuki & Iida, of 31 Barclay street, New York. This terminates a service of twenty-five years with Messrs. Sander. No house ever had a more faithful representative. During this period the Sander establishment has grown from three greenhouses to the immense plants at St. Albans and Bruges, and the orchid has attained its position as a regular florists' commodity in the great cities of America very largely through Mr. Dimmock's persistent efforts in the early days of orchid shipments to New York. He leaves his old employers on most friendly terms, but feels that after eighteen years' crossing and recrossing the Atlantic he is now entitled to a period of home life with his family. We wish him full enjoyment of his well-earned domestic happiness and abundant business success for himself and the esteemed house which he will henceforth represent.

FIRE RECORD.

A fire in the green house of Charles Erdman, Baltimore, Md., January 3, caused a loss of about \$500.

A slight fire started in the greenhouse of John Lambert, 72 Jepson street, Fall River, Mass., but was extinguished before great damage was done.

A fire on the estate of Charles W. Hubbard, Weston, Mass., on the night of January 8 totally destroyed a large stable and greenhouse. Total valuation, \$35,000.

Fire occurred twice last week in the store of Fine Bros., 142 Dartmouth street, Boston, said to have been caused by the overturning of an oil stove. Damage in both cases was trifling.

The residence and hot house of Willis E. Ingalls, situated about a mile outside Bridgton Village, Me., were burned on Jan. 4. The buildings were valued at about \$3000, and were insured.

The green houses of Robert Dennison, 47th street and Conshohocken avenue, Philadelphia, were destroyed by fire on the morning of January 7. The loss is placed at \$4000. The fire is said to have originated in the boiler house.

A fire which started on the ground floor of the Otto Katzenstein & Co.'s establishment, 68 S. Pryor street, Atlanta, Ga., destroyed the offices and damaged the stock of tree seeds. The firm is now in temporary quarters, but will speedily resume their regular routine.

DREER'S Reliable FLOWER SEEDS

New crops of almost all varieties are now in hand
and early orders are solicited

Among the many Flower Seed specialties which we handle none receive closer attention than we know our stocks of these to be the finest procurable at any price. We offer below a few of the most important kinds. For full list see our catalogues for 1906, free on application.

QUEEN BEATRICE

CINCINNATI PARK NOTES.

J. W. Rodgers has been appointed superintendent of city parks to succeed B. P. Critchell, who has held the position for a number of years. The greenhouse which has been maintained by the water works department in Eden Park at an expense of about \$15,000 per annum, is to be abandoned, if the Board of Public Service adopts the recommendation of the new superintendent. It is proposed that the park

J. W. Rodgers

greenhouses shall furnish the bedding plants used at the various pumping stations.

The business men of this city have declared themselves in favor of a park commission with power to fix their own tax levy, and will urge the General Assembly to enact such a law in the near future. This plan of caring for the parks was in vogue some years ago.

CATALOGUES RECEIVED.

W. B. Longstreth, Gratiot, O. Seed Annual and Bargain Catalogue of seeds and plants.

Good & Reese Co., Springfield, O. Trade list for spring of 1906. A comprehensive plant catalogue.

Forest Nursery and Seed Co., McMinnville, Tenn. Surplus wholesale list of seeds and nursery grown seedlings.

The Templin Company, Calla, O. Profusely illustrated catalogue of flower and vegetable seeds, bulbs, hardy plants, etc.

W. Atlee Burpee & Co., Philadelphia. Wholesale Catalogue for seedsmen and dealers. No flounces, but plenty of solid meat.

H. F. Michell Co., Philadelphia. Wholesale Seed Catalogue. Michell's "Very First" tomato adorns the title page. The Waldorf-Astoria never had a better one.

D. B. Long's sample book of Carnation Day cards. These cards should be very serviceable to florists wishing to promote the sale of carnations on January 29.

Burnham Hitchings Pierson Company, New York and Boston. "The Two P's Told in the Pleasure and Profit of Cold Frames." Cleverly written, fully illustrated and handsomely gotten up. It should sell the goods.

R. & J. Farquhar & Co., 6 and 7 South Market street, Boston—Garden Annual for 1906. A superb illustration, in colors, of *Campanula persicifolia grandiflora* adorns the first cover page and hybrid delphiniums are shown on the last cover page with a rare fidelity to colors difficult to reproduce. Many new and striking half-tone flower portraits appear in the 176 pages of interesting reading matter. In the novelty section some good new things are listed.

OBITUARY.

Our English contemporaries record the death on December 24, last, of Mr. Fred Wm. Thomas Burbidge, M. A., V. M. H., curator of Trinity College Botanical Gardens, Dublin, in his fifty-eighth year. His knowledge of

botany and horticulture was extensive and thorough, and he has contributed many valuable additions to plant literature, not the least being "The Narcissus" illustrated and written by him. In 1877 he travelled through Borneo and other portions of the East Indian Archipelago in the search of plants for Messrs. James Veitch & Sons.

CUT FLOWERS

At the Largest Wholesale Flower Market in New England.

WELCH BROS., CITY HALL FLOWER MARKET,
15 Province St., Rear Parker House, Boston.

NEWS NOTES.

Albert L. Hall, florist, of Meriden, Conn., has been discharged from bankruptcy.

The Park Floral Company, Denver, has sent out a desk blotting pad with celluloid top, prettily decorated with holly in colors.

George W. Fullick, of Wayland, Mass., has gone into bankruptcy. Liabilities \$4489, assets \$2543, of which \$2200 is represented in encumbered real estate.

Messrs. T. J. Gorman and Robinson, the Outremont, P. Q. florists, have again been elected by acclamation as town councilors, but Mr. McKenna is having opposition in Cote de Neige.

Rosen-Zeitung, Trier, comes to us this month with two colored plates of roses; Contessa Cecilia Lurani, salmon pink, hybrid tea, and Hermann Rane, creamy blush and yellow hybrid tea. Both very tempting.

Martin & Sons, St. Catharine street, Montreal, were sold out by bailiff's sale on Tuesday, the 8th inst. This is an old established florist firm, doing business in the one store for about thirty years and at one time was very prosperous.

On January 10th a formal transfer of all the property of the assigned estate of Robert Craig & Son was made by Assignee Burton to Robert A. Craig for the stated sum of twenty-two thousand dollars. Robert A. Craig is presumed to be acting as trustee for the new company, which is to operate the plant. Assignee Burton's duties are now purely financial and his connection with the practical running of the Craig place ceased on January 10th.

H. D. Heminway, of the Hartford School of Horticulture, advocates the liberal planting of white pine trees. He considers it one of the most valuable of the soft woods, and one for which there is always a market. Two plantations have been started in Connecticut recently, and there is room for many more. Mr. Heminway deplores the indiscriminate cutting of everything that can be sold from a wood-lot. The farmer would be repaid in the end if he cut only the ripe wood, and replanted at a reasonable time.

CARNATION IMPERIAL.

On this page we illustrate houses of two of John E. Haines' productions. The carnation John E. Haines is al-

Carnation John E. Haines.

ready so well known throughout the country that any description of this fine scarlet other than what is con-

voyed in the illustration will be superfluous. The other variety shown is a seedling which Mr. Haines has named Imperial, and which will be disseminated in 1907 or 1908. It has attracted much attention wherever exhibited. At Philadelphia, last November, it received second prize in the seedling class. At present time it carries stems from 3 to 3 1-2 feet in length.

The report on the Arnold Arboretum at Jamaica Plain, recently submitted to Harvard board of overseers, recommends the addition of two new departments, one for the study of diseases of trees and another for the study of insects injurious to trees and other plants. It states that the income of the Arboretum is inadequate for additional work; that an endowment that will produce an income of \$50,000 will hardly be sufficient to carry on the work already commenced and provide for the new departments mentioned; it suggests an assured income for carrying on dendrological explorations in this and foreign countries and for the publication of the results of its valuable scientific work. A warm tribute is paid to the life-long devotion of Prof. Sargent to the Arboretum and the contributions from his personal income in its behalf.

A. DIMMOCK.

ANNOUNCEMENT.

I beg to inform my friends in the trade that I am no longer representing Sander & Sons—having accepted the European Agency for the **Yokohama Nursery Co.**, under the direction of Messrs. Suzuki & Iida, **31 Barclay Street, New York City**, with offices in London, and through them I will engage in the importing and exporting of all kinds of Japanese stock, together with Orchids, Palms, and other decorative plants.

Respectfully yours,

A. DIMMOCK.

NEW CARNATIONS AT COTTAGE GARDENS.

Among the sterling new productions in carnations holding the centre of the stage at Cottage Gardens at the present time none impress the visitor more strongly than Alma Ward. This regal variety is of Prosperity ancestry, having the characteristic large petal formation of the parent, but blooming much more luxuriantly. The color at first is slightly flushed pink, but when fully mature the flower is pure white. An ideal grower is Rachel Marie Thompson. This is in the popular cerise color and has every indication of a prosperous career. Slightly lighter in color, not unlike that of Ethel Crocker, is the variety known as 569. This is one of the most profuse bloomers, with flower of medium size, a disposition to go striped and mottled with a paler tint being its only noticeable fault.

504 is one that Mr. Ward thinks will butt up against Aristocrat. 508 is not unlike the preceding, but shows a more even color. 503 reminds one much of Nelson Fisher. A pink one, known as the Pink Harry Fenn, is similar to that excellent variety in growth and contour of flower. 2651 is a Prosperity seedling, prettily flushed on a white ground. 2653 is a promising white. Among older varieties Lady Bountiful is holding on splendidly, an occasional half-single flower being its only deficiency. Octoroon maintains its position as a steady goer among the money-making crimson. There are seedlings innumerable from which we cannot fail to hear sensational returns before long. At present, of course, Robert Craig is the admired of admirers, and every day brings pilgrimages from far and near.

VICTORY

The most brilliant scarlet carnation. Requires only ordinary culture. Is a fancy in the fullest sense of the word and wholesaled at \$25.00 per 100 at Christmas.

Cut Flower Market Reports.

BOSTON While no great activity is noted in any special line, yet the flower market may be said to be in a healthy condition, the outlet taking care of the supply very satisfactorily, as a rule, except in the case of white carnations which seem to have struck an unappreciative two weeks and require considerable pushing in order to keep them moving. The carnation exhibition next week may help to improve the tone of the carnation market. The rose demand is not particularly active but the supply is correspondingly light most of the local growers being more or less off crop.

BUFFALO During the past week, a few days of April weather was had, and those who visited among flower stores could plainly see that the warm atmosphere had brought out carnations, roses and bulbous stock a little faster than desired. Stock was not so plentiful up to Wednesday, but Thursday, Friday and Saturday shipments came in heavy at the wholesalers', and naturally prices were at a decline. Carnations came on too fast; the ordinary, as usual, blocked the market to some extent, and consequently had to be moved at a lower price, and a few bargain signs later were seen. The Beauty, lily of the valley and violet trade were somewhat quiet, while lilies, peas, mignonette and white stock were in much better demand than the previous week. Green goods in fair supply.

INDIANAPOLIS. After a quiet week following New Year's the market opened with a brisk demand both retail and wholesale, and we see every indication of a period of very good business. Roses are more nearly equal to demand than at any time in the past six weeks with excellent quality, but a slight shortage of Beauties and other red roses. Carnations of all grades are to be had in great quantities. Tulips, jonquils, sweet peas and lilacs are on the market with demand ahead of supply. Prices have dropped since the holidays but high grade stock is still bringing good prices. All kinds of flowering plants are to be seen everywhere and moving quite freely.

NEW YORK No great change from conditions reported last week is apparent in the cut flower market. Accumulations in some lines, especially white material and bulbous stock generally, are becoming more troublesome and the necessity for unloading large lots

of roses, carnations and other staples after the very moderate daily call has been satisfied, is more imperative. Carnations are less fortunate at present than roses, the market rates being comparatively lower and the demand more uncertain. Quality is excellent in all cases.

PHILADELPHIA From the 8th to the 15th the Philadelphia cut flower market has been both plethoric and platitudinous, this condition being superinduced by too much stock and too little business—and a good deal of both. When it is mentioned that white roses of the lower grades were the best sellers on the market, enough has been said to indicate the state of things. Carnations particularly had a tough time of it. Yellow daffodils are now in and are selling fairly well. Killarney roses are a bit scarce on account of much wood being needed for cuttings

PACIFIC COAST NOTES.

The continuance of dry weather in the farming sections of California has caused the farmers to become worried. While in some sections the early rains have assured good crops, in other places the farmers have been compelled to cease operations. The stock men have suffered severely, many of them being compelled to buy feed for their cattle. In several sections stock succumbed to cold and lack of green feed.

In the southern part of the State severe frost this week hit flowers, vegetables and tender plants very hard in the vicinity of Pasadena and Los Angeles. Most tender plants at the former place were killed or seriously injured. It was the hardest frost Pasadena has had for many years, the thermometer showing ten below freezing point, and ice formed half an inch thick. At Los Angeles weather conditions are unfavorable, moderate rains, but weather very cold and stormy, and all vegetation backward. Considerable damage has been done here by frost, both to nursery stock and ornamental stock in private gardens, especially such as heliotrope, poinsettias, etc.

The Bureau of Plant Industry of the Department of Agriculture has established a new date garden at Yuma, A. T., especially for the cultivation of varieties from the Persian Gulf, and the foreign explorations of the bureau have resulted in the securing of many valuable varieties of dates for the Government date gardens of California and Arizona, and the results achieved in combating diseases of California orchard fruits have been especially gratifying. Remedies for the disease of orange trees known as "die back,"

have been discovered, and the proportion affected in a region where ten years ago 50 per cent of the trees were diseased, has been reduced to less than one-tenth of 1 per cent.

PHILADELPHIA NOTES.

Clarence J. Watson, manager for Samuel S. Pennock, will be married on the 24th inst.

Jacob D. Eisele of the Henry A. Dreer Corporation sailed for Europe on the S. S. Cedric Jan. 10. He will be gone about six weeks.

It is none too early to put dahlia roots in the sand for cutting purposes. The present mild weather for shipping and the Samuel S. Pennock distribution of the famous Atco stock is an opportunity that should not be missed. Mr. Pennock has the 26 best varieties for cut flower purposes.

V. E. Archambault, Jr., an esteemed associate member of the Florists' Club, died Jan. 11 after a brief illness.

Edward A. Stroud of the Strafford Carnation Farms is on the sick list.

Among the prominent new building operations we heard of in this vicinity are those of Adolph Farenwald, David Anderson, R. Scott & Son, Floral Exchange and Wm. A. Leonard.

Wm. J. Muth of the Cut Flower Co. has just returned from a ten-day trip among the growers. He reports good business and a cheerful feeling all along the line.

At present writing it looks as if there will be a good delegation from Philadelphia and vicinity to the carnation convention. Most of them intend to take the Fall River route the night before.

Samuel S. Pennock announces the opening of his additional building, 1608 and 1610 Ludlow street, adjoining his other establishment at 1612-1618 Ludlow street, for Monday, the 22nd inst. His new premises are of the most modern construction, with hot water heating and electric lighting throughout, and runs from Ludlow to Ranstead street, 101 feet by 25 feet, three stores and basement. The front part of the first floor will be used partly as a private office and partly for the elevator. The rear portion of the first floor, 44x25, will be used as a separate store, with entrance on Ranstead street. This new addition, nearly doubling his present floor space, will give Mr. Pennock greatly improved and much-needed facilities for the transaction of his large and rapidly increasing business. A cordial invitation is extended to the trade to call and inspect the new building.

Louis Menand, Albany, N. Y., has filed a petition in bankruptcy. Liabilities \$2,146.35, all unsecured, and no assets.

The
HOLLY-CASTLE
Electric Circulator

The
Sensation of the
Season

The wide spread interest and curiosity concerning this remarkable appliance for comfort, convenience, certainty, and economy in greenhouse heating, leads us to extend an invitation to all attending the **Carnation Convention** at Boston to visit the Dickerman Greenhouses, T. F. Matthews, proprietor, at Dorchester, Mass., where the apparatus has been installed and see a demonstration of its working. A special car will start from Horticultural Hall, Boston, at 1.30 p. m., on Thursday, January 25, the second day of the Carnation Convention.

HOLLY-CASTLE CO., Engineers, 49 Federal Street, Boston, Mass.

Planing Mills.

There are many planing mills which turn out good work—in their line, but as a rule they know nothing of greenhouse construction.

We make it a special study—in fact we have manufactured nothing but greenhouse material for years and feel that we know something about it. Many of the large growers claim we know all about it.

If you have never used our material let us tell you about it—write to-day. Try it on your next house.

Phil-
ght in
glass:
te it.

F. Klimmer, Waldheim, Ill., has No. 8 Boiler bought in 1895. Repairs to date—new flues in 1903. Bought another boiler in 1904.

This Shows our Measure for Carnation Blooms

Send a 2-cent Stamp for One

John Fuhman, Chicago, bought No. 4 Boiler in 1906. Repairs to date—two new flues.

Geo. Wittbold Co., Chicago, has No. 12 Boiler bought in 1895. No repairs at all in ten years.

THIS IS OUR BOILER

We have sold it in every state of the Union and more florists use it than any other make. Don't buy a Boiler until you have had our catalogue. Sent free on request.

N. ZWEIFEL, No. Milwaukee, Wis., writes:—"I have 4 houses each 28x200 feet, with a total of 27,000 sq. ft. of glass. I can get all the pipes warm in thirty minutes with one of your No. 13 Boilers, and it is easy firing."

GRANT NEWPORT, Cedar Rapids, Iowa, writes:—"I bought a No. 2 Boiler in 1902. Takes care of 7,000 sq. ft. of glass; would take care of 2,000 more. I have had a cast-iron boiler, but it broke down twice in four years always in the coldest weather. It broke down Dec 29, 1904, and I lost all my stock in consequence. I have now two No. 2 Kroeschell Boilers, and do not worry about their breaking down."

DAMM BROS., Chicago, write:—"Bought a No. 12 Boiler in 1893. Only repairs in 12 years one set new tubes. Replaced four small boilers and saves \$100.00 in coal each season." Carries 24,000 ft. of glass; 1,000 ft. more than our rating.

WM. GEENEN, Kimberly, Wis., writes:—"I bought a No. 3 Boiler in 1901. We had a corrugated cast-iron fire box boiler and a sectional cast-iron boiler before we bought yours in 1901. The cost of heating with this boiler is **one-half less than it was with my cast-iron boilers**. Your No. 8 Boiler, which we bought recently of you, is not being run to its capacity."

KROESCHELL BROS. CO. 35 E. Erie St., Chicago.

THIS CARNATION BUSINESS

**Is a pretty ticklish proposition if
you don't know its ins and outs**

One of its **ins**, is the house you try to grow them in: one of the **outs**, is the cost of every square inch. of shade. If you don't want a shade trap, then why don't you set a trap for sunshine? Now setting a sunshine trap is just like any other

trapping—"you have to know your business." We know how to build a car-

nation house—know how to keep the sun in and the shade out. This

"sunshine talk" is all very nice but there are a hundred and one other things that go into a house you buy of us. Take a hundred and one things, half a hundred years of building

skill and the best of materials put together in the best way—and you get an idea of the B. H. P. Co. houses. Send for catalog J-G.

One of the best traps we have set is that of W. W. Edgars' house at Waverley, Mass. If you want to see an ideal house, you better take a run out there.

SEE OUR NEW CARNATIONS AT THE CONVENTION

Winsor, White Enchantress, and Helen M. Gould

This is one way to judge carnations. A better and more convincing way is to see them growing. There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

This is a pure white sport of Enchantress, which is at once the most popular and most profitable carnation grown to-day; and this on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those who desire quality as well as quantity will find it in White Enchantress.

HELEN M. GOULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class.

Come and inspect our stock of new and standard sorts for yourselves.

Patten & Co., Tewksbury, Mass.

HANNAH HOBART

The Pride of California. The Grandest of Pink Carnations

A shade deeper than Lawson, blooms four to four and one half inches across, full and regular. Stems long and strong. Does not burst the calyx. Growth free and easy. A prolific bloomer. Its flowers wholesale for a higher price than any other carnation in the San Francisco market. (See illustration and full description in Horticulture of July 1, 1905.) Orders for rooted cuttings booked now and filled in rotation beginning January 1, 1906, at

\$3.00 per 12; \$15.00 per 100; \$120.00 per 1000

MY MARYLAND

ANNOUNCEMENT TO THE TRADE:

We, the H. Weber & Sons Co. of Oakland, Md., respectfully announce that The E. G. Hill Co. of Richmond, Ind., have withdrawn from the contract made with us last Spring whereby they would have jointly with us, disseminated our new white carnation, My Maryland.

The variety has been on trial at Richmond, (3,000 plants), Brooklyn, (300 plants), Philadelphia, (1,000 plants) and Toronto, (1,000 plants).

Reports from the first two named places characterize the variety as being practically worthless, while from Toronto and Philadelphia favorable reports indicate that the variety is beating out our claims for it.

Our own stock at Oakland is in elegant shape. An ex-

tremely wet Summer necessitated the holding of stock in a semi dormant condition after being housed Aug. 15th to Sept. 1st, thus making stock too late for the Fall shows. Since Dec. 1st we have been cutting grand blooms, and to prove our claims for the variety we invite all interested to come to Oakland and look it over. While it is a source of regret to us that the variety has not proven satisfactory in all places tried, we are satisfied that it will prove our claims for it in at least some places besides our own.

We therefore announce that we will disseminate My Maryland as per our advertisements, but before shipping any stock we give to each and every one the right to cancel all or any portion of their orders.

JESSICA, we believe will succeed everywhere. It is even better than last year. As a red and white it has no competitor. Stock ready now. Price for both varieties \$2.50 per doz., \$12.00 per 100, \$100.00 per 1000.

THE H. WEBER & SONS CO., = = Oakland, Md.

"GLENDALE"

New Variegated Carnation

Markings similar to Mrs. G. M. Bradt. A very large flower on strong stems, extremely free and healthy. A non-burster. A fancy of the highest type.

Sample blooms expressed at \$1.00 per dozen. All our carnations have been rather late this season as elsewhere. That is the reason we have not been advertising "GLENDALE" as well as other varieties more extensively.

Rooted Cuttings \$12.00 per 100: \$100.00 per 1000.

Introducers { Chicago Carnation Co., Joliet, Ill.
W. J. & M. S. Vesey, Ft. Wayne, Ind.

CARNATIONS

(Rooted Cuttings and Pot Plants.)

Lawson, Enchantress, Lady Bountiful, White Lawson, Fred Burki, Cardinal, Fiancee, and other standard varieties. Also the new scarlet JOHN E. HAINES and the new white MY MARYLAND. Send for price list.

"Aristocrat"

Announcement.

We herewith confirm the reports, so far as our purchasing the above carnation is concerned. We intend to disseminate same January 1st, 1907. We do not think it necessary at this time to commence boasting of its good qualities and commercial value that has been proven and will be proven again to your satisfaction.

We are now soliciting orders for January delivery and while we do not make a specialty of booking orders subject to cancellation we believe that to cancel is everyones right, if a variety does not live up to its reputation and we respect it if done right and honorably. Orders are already coming in heavily and we strongly advise you placing orders immediately as January bookings will soon be closed.

"Aristocrat" is O. K. and you will not be able to help yourself from buying it later, so place order now as we shall not over book ourselves on it, as we must make good and that is one of our reasons for securing it.

Color: brighter than Lawson, a little brighter shade. Calyx; does not burst. Habit of growth; taller than Enchantress, more wiry and more free. Produces cuttings freely which root easily. Has no disease of any description. Size, as large as Enchantress but form more perfect than any other carnation.

Rooted Cuttings \$12.00 per 100; \$100.00 per 1,000; 5,000 \$450.00; 10,000 \$800.00.

Achimenes

When properly treated the achimenes make showy specimens for the greenhouse or conservatory. They may either be grown in pots, pans, or baskets. The accompanying illustration is a basket, the plants being allowed to grow naturally. The achimenes belongs to the natural order of Gesneraceæ and is allied to the gloxinia. The tubers should be started in a brisk bottom heat, a stove house suiting them well until they commence to flower, when if moved to a cool greenhouse they will continue to blossom for several months.

In starting old plants they should be shaken out of the old compost and the tubers placed in flats of light, sandy soil. They should be watered sparingly at first until growth appears when a greater quantity may be given. To secure a succession of flowers it is well to start them in batches from January until March. After the young growths have reached the length of an inch or so they should be potted into their flowering pots or baskets, several being put in one pot; say, seven tubers to a six-inch pot, increasing the number according to the size of the pot or basket used. A good fibrous loam with a liberal mixture of leafmold and sand and a little decayed manure is a good compost. The pots or baskets should be placed as near to the glass as possible to get the best growth taking care to shade them from bright sunshine.

After flowering commences they may be fed occasionally with liquid manure. If grown in a dry atmosphere they are liable to be attacked with thrips and red spider and they should have occasional syringing to prevent these pests from getting a hold. After the

plants have done flowering they should be placed in a light airy place and dried off gradually until the shoots are thoroughly ripened when these may be cut off and the pots containing the tubers placed on their sides and laid away somewhere where the temperature will not fall below 50 degrees F. No water should be given them all the time they are resting.

There are many good varieties of achimenes and several varieties grown together in one basket, taking care to have the different colors blending, make very showy specimens and are usually much admired.

W. H. Waite

Dracaenas

Having read Mr. McIntosh's article in HORTICULTURE, Jan. 6th, on the above subject, I would like to make a few remarks regarding my experience with dracaenas.

With reference to the superior qualities of *Dracaena* Lord Wolesley over *D. terminalis* for the private gardener or for exhibition purposes there can be little doubt, but florists as a rule still hang to the old variety and the reason they advance is that *D. terminalis* will stand more rough usage than the newer variety on account of its being tougher in the leaf tissue.

As to the propagation of dracaenas; while the root and stem cutting method is the best for increasing stock or if only small plants are wanted, yet for 6 to 8 in. pots such as florists use generally I am certain that mossing, or placing pots on the top of old plants, is still the better method for getting good exhibition specimens, especially with large-leaved varieties, such as *D. Youngii*, *Baptistii*, *Andersonii*, *Shephardii*, etc. To cut off the tops of such varieties and insert in a cutting pot means a great check and being checked at this stage causes the young plants to make small leaves when they begin to grow after rooting, a con-

dition which all good growers try to avoid. Even after the roots are through the moss or first pot another larger pot should be put on with a mixture of soil such as the plants are to be grown on in; then when the roots are well through this the old plants should gradually be dried off for a couple of weeks when the tops may be cut off without any fear of a check. This may appear to be a somewhat slow process, but when we consider that a good-sized specimen can be started in this way, it can readily be seen what a handicap there is on the cutting plan.

Mr. McIntosh recommends copious syringing of dracaenas, whereas the best specimens the writer has grown were set apart specially by themselves to be out of the way of the syringing, because in my opinion too much water lodges at the base of the petiole, causing the plants in time to lose their bottom leaves. For exhibition plants I would recommend wiping over with a sponge once a month, and keeping plenty of moisture around the plants. If any syringing is done I think it should be a very light spraying, using as little water as possible so that it does not run down and find lodgement at the base of the leaves.

James Stuart

Nature's Teaching

The question whether nature is the best tutor in Horticulture is receiving some attention from horticulturists in Europe.

Do cacti demand the dry arid atmosphere such as they are subjected to in their Mexican home for a good part of the year, or would they thrive in a moist genial atmosphere, such as most plants love? We have had considerable difficulty trying to grow certain species of cactus in a house especially built for them, where nearly as possible nature's example was followed and have been surprised and somewhat mortified to see in the window of an ordinary dwelling house the same species in splendid health. The lady whose property and charge they were, when questioned regarding their treatment, could only say that they received no particular attention and were watered perhaps every day summer and winter.

The question which occurs to us is: Do these plants really need the condition found in nature? At the present time certain orchidists in England have got ahead of their brethren and are demonstrating that although the majority of orchids have pseudo-bulbs that must not be taken as an indication that the plants must have a period of rest, which generally means a shrivelling of the pseudo-bulb and consequently a loss of vigor to the plant. "Keep them going" is the motto of this school who also claim that odontoglossums are more healthy if given a warmer winter treatment than is generally considered necessary or advisable.

Hybridization it is claimed has taught the observant cultivator that a seedling was more vigorous and developed quicker under moister and warmer conditions than was considered good for its parents. Whether these conditions in winter would help odontoglossums to stand the American summer better is debatable. Odontoglossums do not like anything approaching a dry atmosphere and should not be allowed to become very dry at the roots. A dry atmosphere is conducive to thrips which is one of the worst insect pests the orchid grower can be troubled with.

The writer has had the charge of a collection of orchids grown for botanical purposes with most of which very little and in many cases no data as to the natural conditions under which they are found, is furnished and, as they are undescribed species, no data is obtainable. After a good deal of experimental treatment I have demonstrated to my own satisfaction that a relative humidity of from 70—80 degrees at all seasons is desirable and that even when a plant is not actually growing these conditions are helpful except in the case of a few deciduous kinds such as *calanthes*, *liparis*, etc. Moisture and warmth do not as a rule cause the plants to make premature growth. In some cases the period of rest is short, but as a rule most growth commences in the lengthening of the days of February and March, a fact which is somewhat remarkable in a house containing five hundred or more species from all parts of the world.

The old idea of punishing an orchid to induce flowers has become old-fashioned and is little practised. It was thought that *Odontoglossum citrosmum* would not develop flowers unless water was withheld from the time the young growth appeared until the flower spike was fairly on the way. It has been found that this is imposing a task upon the plant which is altogether unnecessary.

It was claimed that unless *dendrobiums* were kept cool and dry in winter the flower buds would not develop. Ripening of the pseudo-bulb is necessary but sufficient light can be given for the purpose and the proper percentage of moisture maintained to prevent shrivelling without injury to the flowers. Atmospheric moisture is of far greater importance than temperature, especially during the American winter, when a large amount of fire heat is necessary.

James Hutchinson

North Easton, Mass.

Pruning Ornamentals

In pruning ornamental shrubs there are only two or three things to bear in mind. First, the time of pruning depends on the wood upon which the flowers are borne. Most early bloomers have their buds well developed before winter sets in and so when they blossom in the spring the flowers are carried upon the mature wood of a year or more's growth. Therefore if this class of plants is pruned in the winter it will mean a sacrifice of all or at least a large part of the bloom for the ensuing year. The only way is to postpone pruning until after blossoming.

But the shrubs that bear their flowers on the new wood formed the same year, summer or fall flowering plants as a rule, can be pruned at any time during the winter with no danger of destroying the crop.

The aim of pruning is to supply young, healthy, vigorous bearing shoots in abundance, and to develop a beautiful shrub. To accomplish this the old and dead wood is cut out, and that which is left if it tends to grow rankly is slightly shortened in to introduce a bushy habit of growth. Study the natural habit of the plant and aim to follow it as far as possible. Above all do not shear it off evenly all around into cone shapes, round tops, or other symmetrical forms, unless it is part of the landscape scheme.

A rightly pruned shrub requires little attention; shortening in the new wood, summer pinching of excessive growths, and thinning the centre is practically the whole story.

After winter is over, but before the buds swell; the rose bushes must be attended to. Cut back strong shoots less than weak ones, for severe pruning invigorates and this will give the less progressive a chance to catch up. All must be cut back to five or six buds, the dead wood removed, and the head kept open.

In the case of trees pruning is much more important than it is usually credited with. While May is the best month for this work, any time after the leaves are out will do. This is better than winter pruning as the wounds heal over much more quickly.

Young trees need to be trained from the start. When first set out they should be cut back to nine or ten feet for a tree with a two and one-half inch trunk. Especially is this true of the elm, maple, oak, and loose irregular headed trees in general. It does not apply to pines, firs and the like, whose chief beauty is in their sturdy uprightness. Take the maple for example. To get a round symmetrical head it is necessary to keep the leader cut back. This induces the branches to strive for that position and as they get the nourishment formerly going to the leader the tree gradually assumes a handsome oval shape, instead of the long, lank, ungainly appearance it would otherwise have had, a sight

altogether too common in neglected trees set out along roads and in parks. Cross branches, superfluous limbs, and all unnecessary wood whether limb, branch, or twig must be cut out to prevent retardation of the desirable parts.

Old trees cannot be cut into in too wholesale a manner. If a lot of pruning is needed it is much better to do a little each year for several years rather than do a lot at once. As a rule two or three medium-sized branches is enough to cut off at once. More than this unbalances the relation between the roots and foliage and causes the formation of water sprouts, suckers, and sometimes reduces the foliage so much that the tree lacks the ability to draw up the sap. But all crossing, interfering, dead or dying branches, lateral trunk shoots, dead stumps and the like, should be removed.

In removing large limbs saw close to the trunk with a cut nearly parallel to it. This will heal over quicker, notwithstanding the larger area, than one made at right angles to the limb. Avoid sawing so far from the trunk that a stump is left. Not only is it unsightly, but it is a danger point for infection.

All large wounds should be covered with zinc, tin, or preferably painted with coal tar, a by-product of gas works, or a coat of lead paint. Cavities or old wounds which are not healing properly should be opened and cut smoothly back to sound wood, removing all decaying matter, and then repainted. Deep cavities should be filled with cement or a painted plug. The paint keeps out the spores of disease and protects from insect attacks.

Hollow trees cannot be remedied.

R. Z. Adams

Do Varieties Deteriorate?

This is one of the oldest of garden questions.

From the days of Pliny Secundus and Virgil, at any rate, this problem has exercised the minds of breeders and cultivators in both hemispheres, and so far as actual proof goes we seem as far from a satisfactory answer as ever. At present the general belief is that seedling varieties of the best do deteriorate or wear out sooner or later, as propagated or increased by vegetative methods. In other words, any plants that are increased by division, including grafting and budding, layers or cuttings, or by dividing offsets or tubers, etc., eventually fail, and must be replaced by new selections raised from seeds. This much is believed by the majority, but, on the other hand, a minority persists in maintaining, on the contrary, that varieties of fruit, vegetables and flowers do not deteriorate or wear out, unless they are neglected or become superseded by new kinds, or it may be by old kinds to which new names are affixed from time to time. In the case of the potato especially, deterioration may follow on bad soils, or when bad methods of cultivation are adopted, such as planting too thickly together, the use of too much manure, the growth of the same variety too long on the same soil, especially if it be originally unsuitable, or by the continual use of small and otherwise inferior tubers as "sets" for planting. If it be true that selecting the finest of seed leads to a marked improvement in the succeeding crop, it would not be unreasonable to infer that the worst of seeds would produce an opposite result. As a matter of fact this much is known to be true, and there can be but little doubt that the potato has suffered from the practice of selling or eating

the "ware" or best potatoes, and reserving the smallest or worst produce for "sets" year after year. These methods may not be those practised today by the best growers, but they have long been the rule with small cultivators, and in cases where the soil was also unsuitable the results have been disastrous in the extreme. That deterioration comes to all varieties and is in some cases attributed to old age. The argument is that when a plant or tree is increased any other way than by seeds, there is no new life, the offspring being merely a "chip of the same block," so to say. Thus, a potato set or tuber is not a new plant, but merely a small portion of the original variety. Hence it has been inferred that when any particular variety fails from senility or old age all its descendants fail, or should fail at same time. The common Lombardy poplar has been cited as an instance of this universal failure taking place all over Europe and elsewhere. It is simply a male variety, and has constantly been increased from cuttings or layers, that is to say, from detached bits of the parent tree or its descendants.

If it is true this tree is failing in health and vigor everywhere alike, it certainly looks as if there is something more than mere coincidence or conjecture in the matter. A similar thing has occurred in the case of hardy bamboos in British gardens. Several kinds have flowered and died within the past three years, and it has been argued that the reason of their blooming and dying simultaneously was due to their having been divisions off what originally was one solitary individual plant. In both cases so little is known either historically, or physiologically, of the poplar and the bamboo alluded to, that no rule or law can be adduced from their behavior under cultivation.

After all, the main question as to whether varieties wear out or die out altogether does not so much matter to practical breeders and cultivators, since so soon as their produce falls below a profitable standard they will be supplanted by other and newer kinds. Indeed there are many instances of new introductions and the booming thereof having actually led to the neglect and abandonment of older kinds. The race for novelty is so great that the main question of well-tried quality and productiveness is now and then forgotten in the chase.

H. R. Gilbert

Laelio Cattleya Erotion and Cattleya x Lancastriense

In last week's issue of HORTICULTURE the descriptions of the above two new orchids were unfortunately transposed, and, as their registration correctly is a matter of importance, the writer wishes to make the correction himself and publicly for the error began with him by incorrectly labelling the photographs sent.

Properly the record should read for Laelio-Cattleya x Erotion—Cattleya Walkeriana x Laelia glauca and for Cattleya x Lancastriense—C. labiata x C. velutina. The above is respectfully submitted to editor and readers of HORTICULTURE.

Address
inquiries
to our office

Our readers are cordially invited to send questions upon which information is sought and we shall be glad to refer such to competent correspondents for investigation and answer. Our corps of correspondents is large and among them are those well able to reply to inquiries on any subject concerning the regular practice of horticulture. Several writers for HORTICULTURE have complained of the number of direct inquiries that are sent to them by our readers and that the demand made upon their time in replying courteously to these letters is a serious burden. We would respectfully ask our readers to do us the favor to forward such inquiries to the office of the paper in all cases. They will have prompt attention and all our readers will get the benefit of the information elicited, as they should.

Hasty
conclusions
and cold facts

It is a grievous thing to purchase a novelty in good faith and after having grown it to find it worthless. To this extent we agree with Mr. Fisher in his remarks before the Gardeners' and Florists' Club of Boston. We dislike to believe, however, that wilful deceptions are so frequent as he seems to think. We are all human and it is a natural trait to see in our own product, whether plants or children, a superiority to which all others are blind. Hence exaggerations which in the cold light of later tests prove to have been practical misrepresentations which their author may deeply regret while his conscience may yet hold him blameless. Unquestionably

"Facts are chucks, that wanna ding,
An' downa be disputed."

but the apparent facts of today are sometimes the fallacies of tomorrow and thus it will always be so long as men are human. On the other hand, how apt we are, almost unconsciously at times, to color our conception of a novelty with our estimate of its owner, as though our like or dislike of the man could affect the desirability of his goods. It becomes easy to suspect faults in those against whom we feel the prejudice of race, environ-

ment or business rivalry and equally easy to find superior excellence where the interests of a friend are concerned.

The new
schedule of the
Mass. Horticultural
Society

The prize schedule of the Massachusetts Horticultural Society, just received, shows a refreshing departure from the somewhat antiquated methods and obsolete lists which have so long interfered with the management of the exhibitions of this great society on modern lines. The changes are not too radical and, it is to be presumed, are but the precursors of further movement in the same direction as fast as their efficacy is demonstrated. To so conduct horticultural exhibitions that rivalries on technical points shall be encouraged and competing experts put on their mettle and at the same time bring out the desired artistic expression and spectacular effect which will ensure public support and remunerative results is a problem the magnitude of which is fully appreciated only by those on whom the responsibility of its solution has been placed. Because the Massachusetts Horticultural Society is wealthy and is not obliged to depend on the exhibition receipts for the wherewithal needed to pay the prizes is no reason why "safe and sane" business methods should not prevail in the management of these affairs. There are abundant ways in which the objects of the society as set forth in its articles of incorporation—"for the purpose of encouraging and improving the science and practice of horticulture, and promoting the amelioration of various species of trees, fruits, plants, and vegetables, and the introduction of new species and varieties"—may be better promoted, than by the distribution of hundreds of dollars annually in prizes which neither demonstrate or advance the science of horticulture nor bring out anything that the public care to spend a penny to see. The society is to be congratulated on the onward step now made.

Our Colored Supplements

The beautiful colored supplements sent out with our issues of December 16 and January 20 have been so well received by our subscribers that we have made arrangements for a regular series of these plates to be issued about twice a month. Although this involves a very material addition to the cost of publication it is not our purpose to make any advance in subscription or advertising rates. We would, however, call upon our readers to recognize our enterprise by promptly sending in their dollar for the coming year's subscription, to ask their friends to do the same, to make use of our columns when they have anything to sell and to patronize our advertisers at all times when they need anything offered in our advertising columns. With this sort of encouragement forthcoming we shall not hesitate to add other new features as fast as the support given us warrants it. The next colored plate will be a group of new varieties of tuberous begonia. As the edition will be limited, non-subscribers should send in their names at once with \$1.00 for the year's subscription.

AFTER ADJOURNMENT.

The Brooklyn Eagle of Jan. 17 has a yarn about an emerald green carnation which a florist in Far Rockaway has "succeeded in cultivating." We supposed that all newspapers of any intelligence had "gotten on" to this humbug. The carnation society might do worse than to officially record its condemnation of this atrocious annually-recurring libel on the flower to the interests of which their organization is consecrated.

The F. R. Pierson Company has adopted a plan for labelling each bench of carnations which is worthy of being copied by large establishments generally where an entire bench or more is given to a single variety. The wooden cross-bars to which the wires are attached at the end of each bench are painted a dark green and the name of the variety is inscribed thereon in gold letters by a handy employe. It is a great convenience for visitors and saves the answering of innumerable questions as well.

WHOLESOME CHESTNUTS.

Sow lettuce for early use. Sow lobelia, forget-me-not, myosotis and petunia for pot plants.

Keep on propagating until you are satisfied you have rooted a sufficient number of everything needed, but make sure; faulty guesses are poor consolers.

Get your melon frames in serviceable shape to be ready for immediate use when needed. Paint sashes and all woodwork.

Make all the stakes that may be required during the year; tie them up in bundles, each size in a separate bundle.

If you haven't already given your men a holiday, tell them now they can have one, if not more. They will come back feeling good, and you will feel better, too.

Don't try to rush tulips; if you do you will have but little for your trouble.

In packing, don't be deceived by the weather; rather aim at cheating the weather that may be, than taking any stock in the weather that is.

Now is a good time to wash fruit and other trees with limoid for San Jose scale. The preparation can be bought ready mixed, but it is better if applied hot.

On all likely days give air to everything in frames out doors, and if the weather permits, remove all decayed leaves and vegetable matter from the living.

It is thought better not to prune maple trees in winter.

Prune all flowering shrubs, but don't shear their tops to make them look like umbrellas; better just cut away the wood that is weak and not required, and leave the wood that will flower. That is the legitimate intention in pruning, but alas! what do we often see!

BEGONIA GLOIRE DE LORRAINE.

This illustration shows an average plant as grown for the Christmas trade, in a six-inch pot by Samuel Murray, Kansas City, Mo. Mr. Murray found a prodigious demand for

these at the holidays. At the Kansas City Flower Show he staged a splendid exhibit of specimen Lorraines, giving evidence of high professional skill. The group was one of the notable features of the show.

PRESIDENT BUTTERFIELD.

Much as Rhode Island loves Massachusetts, it is doubtful if the love is ardent enough to ungrudgingly allow Massachusetts to entice her educators away from her. However, be that as it may, President Kenyon L. Butterfield of the Rhode Island College of Agriculture and Mechanic Arts has been elected president of the Massachusetts College of Agriculture at Amherst. Mr. Butterfield during the time he has been at the head of the college at Kingston impressed those most interested as a man exceedingly well fitted for the position, and though they are pleased that he sees in the change prospects of more extended usefulness and a wider scope for his recognized abilities, they nevertheless feel that the agricultural interests of the State would be greatly benefited by his remaining in the State, and for that reason, as well as other personal reasons, much regret is expressed at his decision to become president of the Massachusetts College. But Rhode Island's loss is Massachusetts' gain.

THEY MADE AN ERROR.

Certain recent publications have reported a case of bankruptcy as being that of L. Menand, the Menand florist. This, we are informed, is an error. The bankruptcy proceeding mentioned was taken by H. L. Menand, who was recently engaged in the florist supply business on William street, in the city of Albany.

Mr. L. Menand is a citizen of considerable means, and has been engaged in a lucrative business for a great many years, and is far from being in the position of a bankrupt.

We hope our readers will, as far as possible, buy everything they need from Horticulture's Advertisers.

OBITUARY.

William North Shedaker, son of the Hon. B. D. Shedaker, Edgewater Park, N. J., the well known asparagus grower, died on the 17th inst.

We are indebted to Howard Earl, manager for W. Atlee Burpee & Co., for the following note on the late Paynter Frame who passed away at his home Harbeson, Del., on the 18th inst, aged 80 years.

"The Hon. Paynter Frame was one of Delaware's leading citizens and was an active figure in the politics of that state for over 50 years, serving three terms in the state legislature, and was widely known as the king of water melon growers. Mammoth Ironclad, Fordhook Early, Mammoth Santiago, and The Delaware, were among the varieties raised by him and introduced by Burpee. He also raised Burpee's Melrose and Golden Eagle musk melons. Mr. Frame was one of the most conscientious of men and was possessed of very pleasing manners. If I were not so busy today I could tell you a whole lot more about this grand old man."

The death of Joseph A. Budlong on Sunday morning, January 14, removes from the horticultural arena a figure that has been identified with its interests for many years and has contributed largely to its development in the west.

Mr. Budlong was born in Cranston, R. I., March 17, 1841, and on February 1, 1866, was married to Miss Teresa Smith of Brooklyn, N. Y., who with two children, Albert H. and Mrs. Phil Schupp, survives him.

Mr. Budlong was a New Englander of the old school, genial, resourceful, kind-hearted, upright in all his dealings. His devotion to his childhood's home was shown in his annual pilgrimage thereto on his bicycle each summer, a distance of 1,150 miles. It was while riding his wheel at the corner of Foster and Robie streets on Saturday, January 13, that he met with the accident that caused his death.

In early life he was engaged in the market gardening and pickle business with his brother Lyman A., but some twenty years ago he entered into the growing of cut flowers, and the large range of glass covering an entire square and the wholesale store in the downtown district testify to his success.

He retired from active business life a few years ago, since which time the greenhouses have been in charge of his son and the store in charge of his son-in-law. The business will be continued by the estate.

PERSONAL.

Jno. McIntyre, late with H. H. Battles, Philadelphia, is now with J. J. Habermehl's Sons at the Bellevue-Strafford.

Cards are out announcing the marriage of Robert Halliday of Baltimore to Alverda Mary Easter, on January 24. The happy couple will be "at home" after February 25th, at 1624 Bolton street.

AMERICAN CARNATION SOCIETY.

Story of the Boston Meeting. An Unprecedented Exhibition.

Glorious Weather. Record Breaking Attendance.

Should the American Carnation Society exist for a hundred years to come—and we have no doubt it will—it is highly improbable that they will ever in the whole course of that time open a January meeting with such glorious weather as Boston handed out to her honored visitors on Wednesday, Jan. 24, the opening day of the fifteenth annual convention of the American Carnation Society. The attendance was remarkable in the great extent of territory represented and the prominence in the carnation arena of the individuals. Very few of the names prominent east of the Rocky Mountains were missing from the list of those in attendance. The same may be said of the varieties of carnations staged; few varieties recently heard of or aspirants for position were missing from the tables. The only serious absence was in the case of the varieties associated with the name of H. Weber & Sons, Oakland, Md. Through some inexplicable influence—possibly due indirectly to the warm weather at the time of starting—Mr. Weber's flowers, regardless of variety, were found, when the crates were opened, to have gone to sleep. Not a solitary flower was left. Much sympathy was expressed on all sides for Mr. Weber in this great misfortune.

The forenoon was spent in the work of staging, and it was well along after noon when the army of men had completed this duty and everything was in order for the judges' attention. A brief meeting was called, and it being learned that Mr. Rudd would not be present, William Weber was appointed a judge to serve in his place. Messrs. J. A. Valentine of Denver; Eugene Dailledouze of Brooklyn; and W. J. Palmer of Buffalo, were appointed additional judges. These gentlemen, with Messrs. William Scott and William Nicholson, previously announced, made up a good board of six, and when the evening session was called to order, their complete report, as it appears herewith, was on the secretary's desk ready for presentation to the Society.

The formal opening of the convention took place at 8 p. m., Wednesday, Jan. 24. The lecture hall was well filled with an audience that nearly filled the spacious room. President James Wheeler of the Gardeners' and Florists' Club of Boston, called the meeting to order, and after a few words of welcome on behalf of the club, introduced the mayor of Boston, Hon. John F. Fitzgerald, who made a most interesting and felicitous address on behalf of Boston. He told of the pride of the city in its Public Gardens and of the encouragement given to the public school pupils in the development of a taste for horticulture. He enumerated some of the men who have done so much to give Boston its horticultural prominence and the institutions that they have founded, and claimed that everything good in the

country at large owed something to the inspiration of Boston achievement. In presenting the visitors with the freedom of the city, he advised facetiously that a lookout be kept for the efficient district attorney, but thought no trouble would ensue if normal decorum be observed. His closing reference to Boston's rich historic associations and interesting landmarks was received with enthusiastic applause.

E. G. Hill responded in his usual happy vein, on behalf of the Carnation Society. He noted the great advance in carnation culture since the last meeting in Boston, eleven years ago. He congratulated the city, and admitted all that the mayor had said to be true, but submitted that Indianapolis was becoming a dangerous rival for Boston. Secretary W. P. Rich spoke a

and after a lapse of eleven years, the American Carnation Society again convenes in the city of Boston.

The avowed purpose of the organization at its inception was "The Advancement of the Carnation." Looking backward for a moment and drawing a comparison between the carnation as grown eleven years ago and that of today, no one will deny for a moment that the trend of improvement has been steadily onward and upward until the carnation as a commercial commodity ranks second to none, owing largely to its increased size, long keeping qualities and the beautiful and varied tints of new colors constantly appearing—this last by no means the least, as it keeps it out of a rut, and the purchasing public in this progressive age are ever looking for something new. For this advance we are indebted to a better knowledge as to cultural requirements obtained largely from the many excellent papers read at our annual meetings by growers, professors, wholesalers and retailers, and the free discussions on the science which bring out many points of value and interest, not only to the general grower, but also to those engaged in the cross-breeding and production of new varieties, whose first step if they would be successful must be: Bring your plants up to the highest state of cultural excellence, then it is simply summed up in one word—"Selection" all the time. Prices for strictly high-grade varieties have in some instances kept pace with the best roses, with the single exception of the American Beauty, and I venture to predict that a carnation will yet be produced, the pioneer of a strictly fancy strain in varied colors, that will even rival that popular rose in size and price.

Perhaps in our haste for size we sometimes lose sight of the fact that carnations are in three distinct classes—first, strictly fancy high-grade, producing comparatively few but first-quality blooms; second, the commercial class, producing abundantly blooms of varied color but smaller in size; and third, those exactly intermediate. Most of our popular sorts of today belong to this latter class, producing freely high-grade blooms that ought, in my opinion, to bring a better average price at wholesale than they do at present.

The country florist who retails the smaller commercial varieties at 50 to 75 cents per dozen would do well to grow also some of the better grade varieties. Show his customers the difference and by degrees educate them to buying the better sorts at from \$1 to \$2 per dozen, they would in the end prove more satisfactory to the purchaser, and the florist would derive more pleasure and profit from handling this grade of flowers. Introducers of new varieties would do well

PRESIDENT PETER FISHER.

few words of welcome on behalf of the Massachusetts Horticultural Society, and C. W. Ward made a reply, saying that "Boston never does things by halves, neither does the Carnation Society, neither does the Horticultural Society," and expressing his own attachment and the debt of gratitude he owed the Massachusetts Horticultural Society.

The president of the American Carnation Society, Mr. Peter Fisher, was then introduced, and received an enthusiastic welcome. After a few introductory words of greeting, he proceeded to read his formal address, which was as follows:

PRESIDENT FISHER'S ADDRESS.

Ladies, Gentlemen and Members of the American Carnation Society:

For the second time in its history,

ELSA STRUSS, WINNER OF LAWSON GOLD MEDAL.

to state distinctly to which of the foregoing classes their novelty belongs; also giving to the purchaser information on printed circulars with each shipment, details as to temperature, soil, etc., to assist him in its successful cultivation.

Phenomenal varieties rarely appear and, where they do, our attention ought to be directed to the discovery of cultural methods whereby their vigor and usefulness may be preserved instead of constantly running after new and untried sorts, so many times to our sorrow.

The conduct of originators who, after devoting much space and years to testing a new variety, finally advertising, and booking numerous orders representing thousands of dollars, find on the eve of dissemination that it has developed some trait rendering it undesirable as an acquisition and then withdraw it, is to be very highly commended, and I am glad to note that their number is increasing. This is a step in the right direction; we need more men of this class.

The most serious menace to the usefulness and progress of our society, in my opinion, lies in the staging at our exhibitions of varieties that have little or no commercial value. What is good for the advancement of, or hurtful to this society as a body, must act in like manner to every member as individuals.

The present date of our meeting (the last week in January) is, to my mind, just about the right time to exhibit new sorts, as they are certain during the dull short days of winter to develop any bad traits they may possess. It is easy to place on the exhibition table a variety, to all appearances almost faultless, which the exhibitor well knows will not stand inspection in his greenhouses at this season of the year. The judges must score on this exhibit according to the scale of points adopted by this society. It may score very high, so that it is awarded the trophy we all covet, viz., the gold medal. The prize list is published in the weekly papers, and the trade in general misled. This prize-taker is extensively advertised and thousands of dollars' worth of cuttings sold. A wrong has been committed, and that upon many who can ill afford the loss, not only in cash paid out, but much valuable time, and invariably the best bench space wasted, which must be added to the first cost, and yet our judges did their duty well. (They invariably do; they would not be human did they not make an occasional mistake, but it seldom occurs.) Who was to blame? The extremely charitable will say "a lack of good judgment"—or was it the "honor of the man." I hope before this meeting adjourns that this society will go on record as denounc-

ing anyone who through misrepresentation or concealment of defects disseminates to the trade worthless new carnations.

What we need in the future is disseminators with a sense of honor so fine that they will not hesitate to place alongside their product to be measured by its requirements the golden rule, and as they hear the "whatsoever ye would" ring in their ears will not thrust it aside, as I fear is sometimes done, saying "this does not include me." We would then see less pointing of the "finger of scorn" at the awards of our society; its indorsement would mean what it should, and was intended to be—a guarantee of excellence. A feeling of confidence would be a natural result amongst the trade, and the American Carnation Society would receive an irresistible impetus toward grander and nobler work in its mission for the advancement of the carnation.

The new set of by-laws for this society will be submitted at this meeting for your consideration and acceptance. I trust members will make it a point to attend all the sessions and by their presence and counsel help to make them what they are designed to be, mutually helpful.

Boston and vicinity has left "the latch string out" during your sojourn amongst us and we shall endeavor to make your stay pleasant and profitable.

The next in order were the reports of secretary and treasurer, presented respectively by Secretary Herr and Treasurer Dorner. The reports follow:

SECRETARY'S REPORT.

Mr. President, Ladies and Gentlemen of the American Carnation Society:

The report of the last annual meeting, a preliminary premium list and a copy of the by-laws as drawn up by your Executive Committee, were mailed as issued during the past year. Any paid-up member who did not receive all of these should write to the Secretary at once and see that their name and address get properly entered.

Our annual report is an important part of our work, and our discussions are important and interesting enough to be reported correctly, an impossibility with a new stenographer each meeting. What we need is a stenographer who will be with us year after year, who will learn to know us, learn to know the importance of a word missed in the middle of a discussion. We now pay over \$200 each year for our report; why not pay a little more and have it twice as good?

The attention of the members has been called in the premium list to the yearly expenses of the Society, almost one thousand dollars per year; listen carefully to the report of your Treasurer and you will see how much of this money has to be made up aside from the annual membership dues. The only available way to make this money is by advertising in the premium list and the entries at the shows.

This matter of advertisement is an important one to the Society and every member who has anything to advertise should use the premium list; it may not bring direct results, but it does give publicity at a very nominal figure and publicity before the members of the American Carnation Society is a paying investment.

Occasionally in meeting a fellow member the conversation drifts to the work of this Society, and the question is asked, why do you not do this, and why do you not do that. If any member has an idea of any kind for the betterment of the Society and its work and will put this idea into writing and send it to the secretary at any time during the year, a great amount of practical work could be done that escapes the attention of the officers. Try this for 1906 and begin right now with the question box at this meeting.

We are a live, practical society, but we need the assistance of every member, in order to keep the work up to the top notch of perfection we hope to attain.

After the acceptance of the reports, Prof. H. E. Hall of Durham, N. H., was introduced and gave an interesting and practical address on carnation hybridizing, which was intently followed by his audience. We give the following extracts therefrom:

The method of crossing which has given us the best results is as follows: Selected plants of the varieties to be used in crossing are benched about Aug. 1st in order to have them well established and blooming freely by Oct. 15 at which time we begin the work of crossing and continue until about Dec. 1st. This season is selected for several reasons: more favorable weather than later; greater freedom in the production of pollen; plants are then strong while later they are often weakened through production and attacks of insects and diseases. Another reason often advanced is that at this season there is less danger of an undesirable mixing of pollen by bees and flies, but in our experience such fertilizing of the carnation very seldom, if ever, occurs at any season of the year.

Some varieties never produce pollen, others only during fall and spring, while some are productive in this respect at all seasons. By growing in pots and keeping rather dry we have obtained pollen during the winter months from varieties which refused to produce any when grown in a commercial way.

Select for parents the most promising plants of the varieties to be used. If the flower selected for female or seed-bearing parent contains stamens they should be removed with forceps or tweezers as soon as the flower opens or before the anthers show the pollen, otherwise self fertilization may take place. In most varieties the pollen matures before the stigma is ripe, thus eliminating much of the danger of self fertilization. When the pistil is receptive, which condition is indicated by the development of the stigmatic hairs, the pollen may be applied by the aid of a camel's hair brush or dusted from the male flower.

I have received best results in using for this purpose a strip of ordinary blotting paper three or more inches long and about one-half inch in width, one end being cut with scissors to resemble a sharpened pencil, the point of which is slightly fluffed to enable it to take up and hold the grains of pollen until lightly rubbed over the stigmatic surface of the pistil.

By this method we have been successful in setting over ninety per cent of all flowers worked and requiring very little pollen, none being wasted as in other ways. This method is original with us so far as I am aware.

From 10 A. M. until 2 P. M. on bright sunny days and a fairly dry well-ventilated house, are ideal conditions for pollinating. If the operation is successful the petals will wilt in from 1 to 3 days, soon after which a part of the calyx should be torn down to allow the nectar to drain off which, if allowed to remain, would de-

velop a fungus growth and destroy the ovary. The seed pods should remain on the plant about eight weeks or until the seeds are brown, when they may be gathered with their stems and put away in a dry place for a short time to ripen. A good time to plant is from Jan. 15 to Feb. 15.

Carnation breeding is yet in its infancy. The leading varieties of today will be little grown ten years hence; what the type of that time will be no one can tell. The object of crossing is to combine the good qualities of both parents in the progeny. This combination, however, is seldom obtained, but by knowing the pedigree of each of the parents used the breeder should be able to produce the type desired by growing a large number of seedlings from which to select.

After breeding out of a variety, certain undesirable traits, by selection, and using this variety as a parent in making a cross, we often find the old hidden faults very much in evidence in the offspring. When the inherent forces of two plants unite in a cross, a struggle for supremacy takes place, whereby the fixed or constant characters are set free, to gather again in the progeny in various combinations of form, color, etc.

As no two plants of the same variety are exactly alike, it is very important that a careful selection be made and that a large number of plants be available to select the parents for crossing.

Some varieties have unknown or hidden qualities; for instance, the color character of a flower is often compound when it appears to be simple. In breeding we often look upon a plant as a unit when it really comprises a large number of traits or characters.

The longer we work in a random way the more puzzling becomes the question of inheritance and cross breeding to one in search of definite results.

We should seek a better knowledge of the laws of plant breeding as at present we are groping in the dark so far as a knowledge of past results is concerned.

I would suggest that all information obtainable upon this subject be collected by this society to be published from year to year in its report from which conclusions could be drawn to be used as a foundation for future work, thus enabling us to slowly advance in the knowledge of the laws which underlie the breeding of this plant.

In the discussion following Prof. Hall's address Mr. Ward endorsed that gentleman's advocacy of record keeping. He outlined the methods he had followed for a number of years in his own practice, keeping a tag on each plant, giving the data during the period of observation, which was afterwards filed away in regular form for future reference. He advised the liberal use of white and yellow varieties as plants from which to breed clear scarlets and pure pinks. Breeding from solid colors continuously is apt to develop too great intensity, giving a tendency to blackness in reds and magenta in pinks. He finds that the preponderating color in the pedigree controls the progeny color and not, as is sometimes claimed, that the pollen par-

JESSIE—H. Weber & Son

ent has this special influence. He hopes in time, by constant systematic recording of results, to work out a rule that can be relied upon in breeding to a specific object. On the best time of the year for pollinating he did not agree with Prof. Hall, but thought January and February preferable to October, November or December. Mr. Ward also emphasized the necessity of securing parents in good health, not overfed nor weakened in any way.

President Fisher and R. Witterstaetter agreed with Mr. Ward as to the desirability of yellow in lightening up color in carnation progeny.

Selection of next place of meeting was next in order. Invitations were received from the Pennsylvania Horticultural Society to hold the meeting of 1907 in Philadelphia. J. H. Dunlop presented similar invitations from the Toronto Electoral District Society and the Toronto Horticultural Society on behalf of Toronto.

Nominations for officers were the next business, and resulted as follows: For president, J. H. Dunlop, Toronto, Ont.; vice-president, W. J. Palmer, Buffalo, N. Y.; secretary, A. M. Herr, and treasurer, F. E. Dorner; director to succeed himself, Eugene Dailedouze; judge to succeed himself, W. N. Rudd.

The session of Thursday morning was opened rather late, it being 10.45 A. M. when President Fisher called the meeting to order. The first thing on the program was Thomas F. Galvin's paper on "The Carnation from the Retailer's Standpoint. On account of Mr. Galvin's illness the paper he had prepared was read by his brother, J. Mitchell Galvin.

The paper was as follows:

Being a business man, and also wholly unsuited to take up the matter devolving upon me, viz., to present the commercial aspect of the carnation to your readers and the public, I am free to acknowledge that I approach the subject with much trepidation, but the results of the improvement of the carnation, as a vital adjunct of the florist business have been so far-reaching, and the extraordinary popularity that it has attained in recent years leads me to venture the statement that it has almost supplanted the rose, in interest and importance.

From the small, weak and insignificant pink, slender and drooping in its characteristics, we now have one of the most vigorous, strongest and most important gems of the whole floral kingdom, and so general has been the interest in the development of this popular flower that, beside the above improvements, there have been added many new, brilliant and dazzling colors, which, when massed or assembled and gathered together, produce an effect almost bewildering in attractiveness. In fact, today perfect carnations are an indispensable adjunct of the business of the florist. They have the keeping qualities so necessary for the satisfaction of lovers of the beautiful in flowers, and many instances can be cited where they have graced the boudoir and table and staterooms of many a transatlantic palace liner, when the charm and beauty and fragrance of all other flowers have passed away.

With the present system of growth,

in many instances single flowers have been produced which could not be put into a large sized goblet without being crushed; and with stems so firm and rigid that they could be used for a multitude of purposes without being wired. While this might be considered a more commercial aspect of the question, it is one that is far-reaching in its results. I believe that the introduction of the Lawson carnation has done much to awaken enthusiasm among all classes of our people in favor of this type of flower. It is a well-established precedent that nothing can be made a genuine success without having the attributes of true merit behind it, and in order that the public shall appreciate and realize the good in any proposition or undertaking, it must have the ear-marks of future success. This proud distinction I claim, without prejudice, for the Lawson carnation, and from the time that the wizard of carnation culture, Mr. Peter Fisher, first brought it to my attention, up to the present time, nothing has been produced that can in any way rival this magnificent production. In all parts of the world where the love of flowers is predominant, the name of Lawson carnation is a household word. Its glories have stimulated horticulturists in a laudable and ambitious rivalry to produce something which could compete with it, and while many new types have been evolved which have been a revelation in the floral world, the Lawson, with its brilliant color and sturdy characteristics, in my humble opinion, still holds its proud place as the queen of the carnation family. As our good business stands today, our avocation, with the carnation eliminated from the channels of trade, would be like Shakespeare's greatest production with Hamlet left out. With the increased public interest in the carnation a more popular demand has been stimulated in all that tends to develop and build up a business which is increasing wonderfully all over the world. From a comparatively unimportant, and I might almost say, obscure line of trade, we are becoming a famous, popular, profitable and important industry. Nature is so lavish with her favors, and so wonderful are our resources of soil and climate, and environment, being absolutely boundless in their possibilities, that we have a never-ending field for honorable service and ambition to cultivate. Montgomery gave to the world his magnificent results of rose culture; Coleman first brought to our notice the great possibilities of the chrysanthemum; Fisher astonished us all by his careful, patient and successful efforts on the carnation. And I take a pardonable pride in a modest reference to the fact that here in our own good city of Boston, much that has been done in growth, progress and good results has been introduced and brought to a successful conclusion by Boston men.

Our business has reached a volume and proportion beyond what the most sanguine could be led to hope for, and speaking from the standpoint of a retailer, I can say the beautiful and popular carnation has not been the least of the factors contributing to this attainment.

The secretary then read a list of the varieties registered during the year. A discussion ensued on the

necessity of a better system in the department of registration, which resulted in the adoption of a motion to have a committee appointed to make a set of new rules governing the matter of registration. Messrs. C. W. Ward, F. R. Pierson and J. A. Valentine were appointed as the committee. An animated debate on the recommendations in the president's address brought out a vote that it is the sense of the meeting that no final certificates of merit be given to any variety until the growing stock has been inspected by a committee of competent judges, and so recommended by them for final action by the society, and this matter was given to the above-named committee to be incorporated in their report.

The next thing on the program was J. A. Valentine's paper on "Carnations in the Rocky Mountains." Mr. Valentine was received with great cordiality, and his splendid paper was accorded tumultuous applause and a unanimous vote of thanks. Lack of space compels us to hold it over until next week.

H. M. Altick made an interesting report for the committee on McKinley memorial, showing that he had collected \$795.39 in cash and had several hundred dollars more subscribed but not yet paid in.

THE EXHIBITION.

As before stated, the exhibition excelled in every respect anything thus far in the Society's history, not only in the extent and number of the exhibits, but the quality of the blooms. With the exception of Mr. Weber's flowers, which were ruined in transit, practically everything arrived in good order, and it is especially gratifying to record that the flowers held over splendidly, and Thursday morning found the display almost as fresh and attractive as on the opening day. Indeed, some exhibits actually improved. The wonderfully congenial atmosphere of Horticultural Hall for flower keeping was again in evidence in a most unmistakable manner.

The coveted Lawson gold medal was won by Cottage Gardens with the beautiful cerise, Elsa Struss, which was described in a recent issue of HORTICULTURE under No. 508. The Lawson silver medal went to F. R. Pierson Company for the pink gem Winsor, also described at length in these columns recently. Robert Craig, from the Cottage Gardens, won the Lawson bronze medal. The S. A. F. silver medal was won by Cottage Gardens with Mrs. C. W. Ward, described in our columns recently under No. 504. Two bronze S. A. F. medals were recommended by the judges, one to Cottage Gardens for Robert Craig, and one to Peter Fisher for Beacon, a superb red.

Silver cup, offered by A. H. Hews & Co., Cambridge, Mass., for the best collection of carnations, four varieties, 25 blooms of each, to be shown in separate vases, either seedlings or named sorts and no restrictions as to color—William Nicholson, Framingham, Mass.

Silver cup, offered by Thomas F. Galvin, Boston, for eight varieties of carnations, 25 blooms to a vase.—Peter Fisher, Ellis, Mass.

Silver cup, offered by W. W. Rawson Seed Company, for three varieties of

carnations, 50 blooms to a vase.—William Nicholson, Framingham, Mass.

Silver cup, offered by R. & J. Farquhar Company, Boston, for the best 12 blooms of a carnation (one variety), open to private gardeners only.—W. Kleinheinz, Philadelphia, with Lady Bountiful.

Fifteen dollars cash by the Schlegel & Fottler Seed Company, Boston, for the best vase of 100 blooms, dark pink carnations.—Patten & Co., Tewksbury, Mass.

Ten dollars cash by William Nicholson, Framingham, Mass., for the best vase of 50 blooms, dark pink carnations.—D. Carmichael, Wellesley, Mass.

Ten dollars cash by Patten & Co., Tewksbury, Mass., for the best vase of 100 blooms, variegated carnations. Mrs. M. A. Patten type.—Peter Fisher, Ellis, Mass.

Two prizes, \$15 and \$10, by the Gardeners' and Florists' Club, Boston, open to private gardeners only, for the best three vases of carnations (three varieties), 25 blooms to each vase.—First, L. W. Kleinheinz, Philadelphia, Pa.; second, H. P. Belmont, Newport.

The awards in the regular schedule list were as follows:

Vase 100 blooms, daybreak shade of pink—First prize, Peter Fisher, Ellis, Mass., with Enchantress; second, F. R. Pierson & Co., Tarrytown, N. Y., with Enchantress.

Vase 100 blooms, Lawson shade of pink—First prize, Peter Fisher, Ellis, Mass., with Nelson Fisher; second, Pierce Bros., Waltham, Mass., with Mrs. T. W. Lawson.

Vase 100 blooms, Scott shade of pink—First prize, S. J. Goddard, Framingham, Mass., with Helen Goddard; second prize, Cottage Gardens, Queens, N. Y., with Mrs. W. B. Mershout.

Vase 100 blooms, scarlet—First prize, Cottage Gardens, Queens, N. Y., with Robert Craig; second, Pierce Bros., Waltham, with Beacon.

Vase 100 blooms, crimson—First prize, Cottage Gardens, Queens, N. Y., with The President; second, Dailedouze Bros., Flatbush, N. Y., with Crimson Glow.

Vase 100 blooms, white variegated—First prize, F. R. Pierson & Co., Tarrytown, N. Y., with M. A. Patten; second, Peter Fisher, Ellis, Mass., with M. A. Patten.

Vase 100 blooms, any other color—First prize, W. Nicholson, Framingham, with Prosperity; second, Patten & Co., Tewksbury, with Mikado.

Class B, open to all varieties disseminated prior to July 1, 1905.

Vase 50 blooms, white—First prize, Patten & Co., Tewksbury, with Lady Bountiful; second, Peter Fisher, Ellis, Mass., with Lady Bountiful.

Vase 50 blooms, daybreak, shade of pink—Patten & Co., Tewksbury, with Enchantress; second, Thomas F. Mathews, Dorchester, with Enchantress.

Vase 50 blooms, Lawson shade of pink—First prize, Guttman & Weber, Lynbrook, N. Y., with Mrs. T. W. Lawson; second, Pierce Bros., Waltham, with Mrs. T. W. Lawson.

Vase 50 blooms, scarlet—First prize, F. R. Pierson & Co., Tarrytown, N. Y., with Red Lawson; second, Patten & Co., Tewksbury, with Minley.

Vase 50 blooms, crimson—First prize, Cottage Gardens, Queens, N. Y., with Octoborn; second, Bowker & Co., Cambridge, with Harry Penn.

Vase 50 blooms, yellow variegated—First prize, Patten & Co., Billerica, with Eldorado.

Best vase 50 blooms, white variegated—First prize, Patten & Co., Tewksbury, with M. A. Patten; second, F. R. Pierson & Co., Tarrytown, N. Y., with variegated Lawson. Class C, open to all varieties disseminated prior to July 1, 1904.

Vase of 25 blooms, white—First prize, Charles S. Grant, Rutherford, Me., with Lady Bountiful; second, Patten & Co., Tewksbury, Mass., with the Belle.

Vase of 25 blooms, daybreak shade of pink—First prize, George E. Buxton, Nashua, N. H., with Enchantress; second, F. R. Pierson & Co., Tarrytown, N. Y., with Enchantress.

Vase 25 blooms, Lawson shade of pink—First prize, Pierce Bros., Waltham, with Mrs. T. W. Lawson.

Vase of 25 blooms, scarlet—First prize, George E. Buxton, Nashua, N. H., with Cardinal; second, F. R. Pierson & Co., Tarrytown, N. Y., with Red Lawson.

Vase of 35 blooms, crimson—First prize, Backer & Co., Billerica, Mass., with Harry Penn.

Prize of 25 blooms, yellow variegated—First prize, Backer & Co., with Eldorado.

Vase of 25 blooms, white variegated—First prize, Pierce Bros., Waltham, with M. A. Patten; second, Backer & Co., Billerica, with M. A. Patten.

Best general display of commercial carnations, with no restrictions as to color, variety disseminated prior to April 1, 1905, 50 blooms shown to a vase, display not to exceed 20 varieties; vases from this collection not allowed to compete in any of the other classes. First prize, \$50, The Noble Greenhouse Company, South Sudbury, second, \$30, The Chicago Carnation Company, Joliet, Ill.; third, \$20.

Special mention was given to Backer & Co. for seedling, Elm Court Farm for Flamingo, H. W. Field for Prospector, Daille Douze Bros. for Rob Roy, H. R. Carlton for violet Gov. Herick, William Sim for sweet peas, and violet Princess of Wales, John T. Gale for sweet peas, F. R. Pierson Co. for Nephrolepis elegantissima, James Crawshaw for new asparagus, F. H. Kramer was present with a vase of his rose Queen Beatrice. A number of special trade exhibits were located at the west end of the large hall. Among them were Kroschell Bros., with greenhouse heating specialties under charge of Fred Lautenschlager; H. M. Robinson & Co., florists' greens; Cleveland Cut Flower Co., everlasting greenhouse bench; Gove Bros., zinc capes for glazing; F. T. Buxton, greenhouse bracket; G. B. Anderson, ventilating appliance.

In the small exhibition hall a very choice display of primulas, sinensis and obconica—orchids, violets, carnations, etc., was made under the auspices of the Massachusetts Horticultural Society. Prizes were awarded in this department as follows:

Awards for plants and flowers. Primula sinensis, six plants in not less than six inch pots—First, Edward J. Milton; second, William Whitman; third, Mrs. J. L. Gardner. Primula stellata, six plants in not less than six-inch pots—First, William Whitman; second, Mrs. J. L. Gardner; third, Mrs. C. C. Converse and Mrs. Lester Leland. Primula obconica varieties, six plants in not less than six-inch pots—First, Mrs. J. L. Gardner; second, George F. Fabyan, third, George F. Fabyan. Violets, best bunch, 100 blooms, double—First, J. T. Gale, second, Malcolm Orr; third, A. F. Calder. Best bunch, 100 blooms, single—First, Dr. C. G. Weld; second, Harry F. Woods; third, G. W. Ayer. Carnations, best vase, 25 blooms, white—First, H. A. Stevens Company. Best vase, scarlet—First, H. A. Stevens Company. Best vase, light pink—First, L. E. Small; second, R. D. Kimball. Best vase, any named daybreak-colored variety—First, Backer & Co.; second, Elijah A. Wood; third, H. A. Stevens Company. Best vase, dark pink—First, H. A. Stevens Company; second, H. A. Stevens Company; third, Backer & Co. Best vase, crimson—First, Backer & Co.; second, H. A. Stevens Company. Best vase, striped—First, William Nicholson; second, H. A. Stevens Company; third, Backer & Co. Best vase, yellow—First, Backer & Co.; second, ditto; third, ditto.

Gratuities—H. A. Stevens Company, display of carnations; H. A. Jahn, display of carnations; William Nicholson, carnations; J. E. Rothwell, vase of cut orchids; Mrs. W. A. Blake, helia superbiens and expidium nitens; William Whitman, Primula obconica; Mrs. Frederick Ayer, Chorizema ilicifolia; Harvard Botanic Garden, calceolines and primulas; Thomas Stock, vase of bonvardia and centaurea; Julius Roehrs Company, vase of orchids and platanopsis; Harvard Botanic Gardens, display of strobilanthes, cyclamen and lachenalia; Julius Roehrs Company, display of forced lilacs.

Silver medal Oakes Ames, rare orchids of botanical value; J. E. Rothwell, Laelia cathleya, Gen. French (C. trianae); L. C. Nabarra.

First class certificate of merit Alexander Ogg, anathyllis of remarkable growth; Lowthorpe school of horticulture, Groton, Mass., Mahernia odorata.

Honorable mention H. A. Jahn seedling carnation, No. 49.

Awards for vegetables—Cauliflowers, four specimens, first, E. R. Teel; second, J. M. Handley; estate; third, W. H. Teele, Celery, four roots, first, A. E. Hartshorn, second, W. Heustis & Son; third, W. H. Teele. Lettuce, four heads, first, George D. Moore; second, A. E. Hartshorn; Mushrooms, 24 specimens, first, H. A. Stevens Company. Parsley, two quarts, first, A. E. Hartshorn; second, Mrs. C. C. Converse and Mrs. Lester Leland. Radishes,

four bunches, first, A. E. Hartshorn. Spinach, 12 specimens, first, W. Heustis & Son.

THE CLOSING SESSION.

At Thursday afternoon's session Vice-President Dunlop occupied the chair. On the question of location for next year's convention he informed the society that arrangements would be made whereby all flowers intended for exhibition purposes would be admitted free of duty, whereupon Toronto, Ont., was selected as the location for the convention of 1907. A. J. Guttman of New York then read his paper on "The Carnation from the Standpoint of the Wholesaler." This excellent paper will appear in our issue of next week.

Election of officers was then held and the following gentlemen were each unanimously elected: President, J. H. Dunlop, Toronto, Ont.; vice-president, W. J. Palmer, Buffalo, N. Y.; secretary, A. M. Herr, Lancaster, Pa.; treasurer, F. E. Dörner, Lafayette, Ind.; trustee, Eugene Dailedouze, Brooklyn, N. Y.; judge, W. N. Rudd, Chicago.

The proposed new by laws of the society were then taken up and after a free discussion on each clause and a number of amendments were finally adopted. The committee on final resolutions, Messrs. P. J. Hauswirth, P. O'Mara and W. F. Kasting presented the following report, which was unanimously adopted, after which the convention adjourned:

"Your committee on final resolutions desires to record for the American Carnation Society their high appreciation of the unstinted welcome extended to us by the city of Boston through its honored chief magistrate, Hon. John F. Fitzgerald. It is with feelings of heartfelt gratitude that we acknowledge the generous hospitality extended to us by the Massachusetts Horticultural Society, and the Gardeners' and Florists' Club of Boston, whose guests we were; this coupled with the unvarying courtesy and uniform kindness shown us will keep forever green in our memory the Boston convention of 1906. To the daily press of Boston we express our pleasure and appreciation for the full accounts and friendly notices presented in its columns. Therefore be it

Resolved, That we extend to His Honor the Mayor, the Massachusetts Horticultural Society and the Gardeners' and Florists' Club of Boston our appreciative thanks for the kindly and generous welcome accorded to us, and also to the daily press of Boston for its friendly notices. We wish to assure all who have in any way contributed to the success of the convention of 1906, that their efforts are appreciated and we extend to them our warmest thanks."

THE BANQUET.

The visitors were entertained on Thursday evening in the banquet hall of the Copley Square Hotel as guests of the allied horticultural interests of Boston, President Wheeler of the Gardeners' and Florists' Club presided and Judge C. W. Holt of Nashua, N. H., filled the position of toastmaster with characteristic ability and wit. Letters were read from the mayor and from W. R. Smith of Washington, D. C., expressing good wishes and regret at inability to be present.

The first toast, to the ladies, was responded to by L. E. Marquise of Syracuse, N. Y., who told some amusing stories as a starter and finished with due eloquence. Prof. L. C. Elson, being the next called upon, gave an interesting account of the association of flowers with banquets in the festivities of the ancient Egyptians, Romans and Greeks and closed with the following clever original lines which were vociferously cheered.

Let others sing the blushing rose
With fervent agitation,
I'll praise as wonderful a flower,
The florist's pet Carnation.

We've had them here of every sort,
This is no mere bravado,
There's been a great "Enchantress" who
Entranced the brave "Mikado."

And there was pretty "Alma Ward,"
As "Winsome" as a fairy,
And "Victory" and "Winsor" too
With graces light and airy.

And since this is Ladies' Night,
I'll call to your attention,
That there were ladies mid the pinks
Too numerous to mention.

QUEEN BEATRICE

For "Mrs. Patton" chaperoned
A "Finnee" sedately,
While "Lady Bonntiful" brought "Belle"
And "Helen Goddard" stately.

And "Mrs. W. B. Mershont"
With "Mrs. Ward" was sitting,
While round about Miss "Elsa Struss"
An "Octobron" was fitting

And in this coterie of dames
Stood "Mrs. Lawson" beaming,
While "Marion Pierce" made her debut
With every petal gleaming

A "Mandy" party too was there,
With "Nelson Fisher" in it,
Where "Robert Craig" stood up to talk
With "Harry Fenn" a minute.

But one "Aristocrat" held off
To wait another season,
He'll be with us this time next year,
Or have to show a reason

Upon our "Eldorado" fair,
"Prosperity" descended,
The "President" himself was there
By "Cardinals" attended.

Now here's to the convention guests,
Let's give them an ovation,
Long live the Florists of this land,
Long life to their Carnation

W. F. Kasting of Buffalo responded for the S. A. F., and earnestly urged all present to go to the convention at Dayton, O., next August.

E. G. Hill seconded the appreciative sentiments of Mr. Marquisee on the ladies coupling especially therewith the name of Mme. Lemoine of France, who had contributed so much to the great horticultural achievements of her honored husband.

The Farquhar cup was then handed to its winner, Wm. Kleinheinz of Philadelphia; the T. F. Galvin cup to Peter Fisher; the Rawson cup and the Hews cup to Wm. Nicholson; the Lawson gold medal to C. W. Ward, and the Lawson bronze medal to F. R. Pierson, all of whom responded in words of appreciation. Mr. Ward pleaded guilty to being as much of a ladies' man as Mr. Hill. He gave a pleasant account of a recent visit to Luther Burbank while on a trip to the Pacific coast. F. R. Pierson also followed suit in eulogizing the ladies, whom he was delighted to see in such large numbers at the banquet, and said he had never known the place the ladies occupied in horticulture until he had come to Boston. J. H. Dunlop, president-elect, expressed his appreciation of the honor conferred on him and said he hoped to see the next carnation convention outside of the United States a great success, urging the co-operation of all present to bring this about.

Patrick O'Mara responded for the bachelors. He said that these "had been created by God for the consolation of widows and the hope of maidens." He confessed to being a "confidence man," but had been unable to find anything green enough in Boston. He created much merriment by his enumeration of the artistic, sensational and ridiculous fakes in horticulture, including in the category some of the alleged achievements of a Pacific coast celebrity who had been lauded as outdoing the Almighty. J. Austin Shaw was the last speaker, his topic being the power of the press. He spoke a word of kindly praise for Boston's latest addition to the list of journals, *HORTICULTURE*, and told of the sentiments pervading the entire horticultural press and their activity in promoting the best interests of horticultural advancement. He closed with some amusing topical verses and a recitation.

During the evening songs were delightfully rendered by Miss Wither and Mr. F. B. Carroll and by Mr. Lawrence Toronto's gifted troupe. A roving band of thanks to the toastmaster brought to a close this very enjoyable reunion.

The banquet hall was lavishly decorated with flowers and green

News of the Clubs and Societies.

WASHINGTON STATE HORTICULTURAL SOCIETY.

The second annual meeting of this body was held in North Yakima on January 9-12. Among the valuable addresses of the first day was that of President Richards, who, in reviewing the growth of horticulture in the last decade stated that more than 600 cars of apples were being shipped from the state annually now where ten years ago there were not enough to be recorded. The second day was devoted largely to the codlin moth. Prof. Melander of the State College, stated that he estimated the value of the apple crop annually destroyed by the codlin moth as \$200,000. In the lengthy discussion which followed it was generally conceded that the pest could not be eradicated. On Thursday officers for the ensuing year were elected as follows: President, W. H. Paulhamus of Sumner; vice-presidents, J. F. Littooy, Everett, and W. S. Phillips, Wenatchee; treasurer, W. N. Just, N. Yakima; secretary, L. G. Monroe, Spokane. The committee on resolutions urged earnest work for the passage of the bill appropriating money for state experimental purposes. Everett was selected for the convention of 1907.

LENOX HORTICULTURAL SOCIETY.

The regular meeting was held January 20. Vice-President Heeremans in the chair. Pres. Carlquist, while walking to the village, slipped on the ice and broke his arm, and was not able to attend.

A scale of points for judging vegetables and fruits at our exhibition has been drawn up, and was unanimously adopted. The ball committee reported progress; have engaged Gartland's Tenth Regiment orchestra of Albany and the ball will be given February 6. A paper on "Greenhouse Heating and Boilers" by Charles W. Cary, secretary of the Greenhouse Heating Fitters' Association of New York and vicinity, was read and was esteemed by all present to be very valuable. After adjournment a social hour was enjoyed.

GEORGE FOULSHAM, Secretary.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

The United States Nursery Co., S. W. Crowell, manager, Rich, Miss., submits for registration a new rose, Helen Good, a sport from Maman Cochet; identical with the variety in growth, foliage, size and shape of flower; differs only in color which is a shell pink, suffused with golden yellow. Very distinct.

W. J. STEWART, Secretary.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

At the last meeting of this society the question of having a large show in November was discussed and the decision was unanimous in favor of it. The program for the year is as follows:

February 6.—Rose Culture Under Glass.—J. MacGregor.

February 20.—The Chrysanthemum.—W. Angus, Chapinville, Conn.

March 6.—Cut Flowers.—J. N. Champion.

March 20.—The Carnation.—H. Cliff, Fairfield.

April 3.—Flower and Vegetable Seeds.—R. Veitch.

April 17.—Trip to Jamaica.—E. F. Coe.

May 1.—Pansy Culture.—A. J. Thompson.

May 15.—The Begonia.—William Ferrier.

June 5.—Landscape Gardening.—P. Keane.

June 19.—Heather.—E. Carroll.

July 7.—Perennials.—J. H. Murray.

July 17.—The Cactus.—W. Koella.

August 7.—Gladioli.—J. H. Slocombe.

August 21.—Grape Culture Under Glass.—D. Kydd.

September 4.—Water Lilies and Goldfish.—F. Duffy.

September 18.—Dahlias.—J. H. MacDonald.

October 2.—Vegetables.—H. Grove.

October 16.—Boston Ferns and Commercial Plants.—F. Rehbein.

ELBERON HORTICULTURAL SOCIETY.

The regular meeting was held on Monday, January 22, with the largest attendance since the society was formed. One new member was admitted. A paper, "Carnation Culture," was read by G. Masson, which was ably written, favorably commented on, and much enjoyed.

OMAHA FLORIST CLUB.

This club, which was formerly known as the Nebraska Florist Society, held its first meeting of the year on Jan. 11. It was decided to hold a flower show in the fall, and A. Donahue, W. R. Adams, J. J. Hess, L. Henderson and J. F. Wilcox were appointed to arrange for it.

NEW HAMPSHIRE HORTICULTURAL SOCIETY.

At the annual meeting held in Concord on January 17, the following officers were elected: President, C. C. Shaw, Milford; vice-president, John T. Harvey, Milford; secretary, W. D. Baker, Quincy; treasurer, T. E. Hunt, Lakeport. It was voted to hold the annual summer meeting with Prof. J. W. Sanborn on Wilson Farm, Gilmanston, June 27.

VICTORY

A brilliant scarlet Carnation. Requires only **ORDINARY CULTURE**. Is a fancy in the fullest sense of the word. Wholesaled for \$25.00 per hundred at Christmas. We need no longer advertise Victory aggressively. Over 200,000 already are sold. All orders booked now for March delivery. Be quick if you want the freest blooming and best **COMMERCIAL SCARLET**.

CUTTMAN & WEBER, 43 WEST 28th STREET and LYNBROOK, L. I.

GARDNER'S SPECIAL OFFER OF ROSES, PRIVET, PHLOXES AND HOLLYHOCKS

To clear the ground quickly and make room for other stock we make cash offer of several large blocks of the under rated:

ALL FIELD GROWN STOCK

Farquhar Rose, 2 year, field grown	per 100	\$7.50
Dorothy Perkins, 2 year, field grown		7.00
Rosa Multiflora, 2 year, field grown		4.00
California Privet, 2 year, 1 1-2 to 2 feet, well branched, shapely stuff	per 1000	25.00

California Privet, 2 to 2 1-2 feet, well branched and shapely	per 1000	\$35.00
Wm. Robinson Phlox, the best hardy, salmon pink variety on the market, 2 year, field grown clumps, extra value	per 100	8.00
Allegheny Ben's Hollyhocks, an extra fine strain of this popular Hollyhock	per 100	3.00

MONTGOMERY NURSERIES - - - Villa Nova, Del. Co., Pa.

JNO. G. GARDNER, Proprietor

Only 12 miles from Philadelphia on the P. R. R., prompt shipments to all points.

NEW CARNATIONS OF H. WEBER & SONS.

My Maryland. Pure white. This variety has already been freely exhibited over the country, and described before in these columns. In some sections it will require severe pruning, owing to the heavy growth it makes in certain soils.

Jessica. Red and white variegated. Habit and height similar to Lawson, but is even a stronger grower. Of Bradt and Helen Keller extraction on the one side, and Lawson on the other. Size, 3 1-2 inches in diameter.

No. 24, '02. Parentage, a deep pink seedling and Lawson. Height and habit very similar to Lawson. Flower is considerably larger, better formed and of better and more even color. All shoots come from the base of plant, the stems being practically bare of any side growth. Size 3 to 3 1-2 inches.

No. 135. Gov. Lowndes x New Day-break. A brilliant shade of daybreak pink. Habit and height similar to Lowndes, but stronger and better. Very free, early. Well filled but not heavy flower; strong stems and a fine keeper. Requires no feeding during winter, and must be grown cool. Size, 3 to 4 inches.

No. 70, '02. Pure pink, quite distinct from anything ever before seen. Size from 3 to 4 inches, according to treatment given. Strong grower, blooming early and producing long stems right at the start. When grown cool the habit is ideal, but inclines to softness when grown too warm. Messrs. Weber say that this variety is probably the greatest producer ever grown on their place.

No. 9, '03. In color, a very much improved Prosperity. Parentage,

Prosperity x No. 24, '02. Ground color is white, heavily overlaid with scarlet, barring a broad distinct zone of pure white on the edges of the petals. The latter are deeply serrated. It has the stiff stems of the pollen parent, and as long as Prosperity. In size it is equal to Prosperity at its best.

BURPEE'S EARLIEST WHITE,—in contrast with "Mont Blanc" to the left,—see text below.

New Sweet Pea, — Burpee's Earliest White.

Origin. Florists, who force Sweet Peas, can imagine our delight when, two years ago, our friend, Mr. THOS. GOULD, of Ventura County, California, found that in a field of the *Re-Selected Burpee's Earliest of All*, which he was growing for us, one plant,—exactly similar in all other respects,—produced *pure white flowers*. Needless to say this plant was carefully guarded, and by growing two crops each season we are now able to introduce BURPEE'S EARLIEST WHITE as the only white Sweet Pea that will be used for forcing or extreme early crop,—just as soon as its unique merits are known and sufficient seed can be obtained.

Burpee's Earliest White has been carefully tested at FOREHOOK and the originator's crops thoroughly inspected in California during the seasons of 1904 and 1905. After returning from our first visit the past season (in July) we wrote that of the new crop then starting with *Mont Blanc* alongside) we should like a photograph. On August 22, 1905, Mr. THOS. GOULD sent a photograph from which the above illustration has been reproduced, and wrote:

"The crop planted July 12th came in bloom August 20th and is now *quite white* as a field with no spots whatever showing. The habit is without exception uniformly dwarf and even. The coloring is *clear white* and the stock is of unusual sturdiness both in germination and in growing qualities. The plants of *Mont Blanc*, from the seed planted the same day, are as yet showing no signs of bloom. In this line I should remark that in former test-when I quoted the *Mont Blanc* as a white variety next-earliest bloomer it related only to one or two plants in the lot tested as competitors. As to the general blooming of the two varieties, the *Mont Blanc* was too far behind for real consideration. A description of *Burpee's Earliest of All* excepting as to color will correctly apply to this new pea."

Burpee's Earliest White

comes into full bloom forty-five days after the seed is planted in the open ground. The dwarf plants, sixteen to twenty inches high, are clad in rich, dark-green foliage and carry a profusion of the *pure white flowers* borne upon strong stems six to eight inches long. Each stem has two or three of the fully-expanded, well formed flowers, of good size and placed close together.

Burpee's Earliest White is not only as *extremely early* but is so *just as hardy* as the famous pink- and white *Burpee's Earliest of All*. It has a *hard seed*,—and is really the only *clear white Sweet Pea* that has! This insures a better stand, stronger and more thrifty plants.

Burpee's Earliest White will be welcomed by florists for forcing, because there is no other variety so *quick growing* or *earliest blooming*, excepting only *The Re-Selected Burpee's Earliest of All*,—the earliest "pink and white." Like the latter, the plants under glass begin to bloom freely when only twelve inches high and continue to grow and flower *profusely* until, when six or eight feet tall, they reach the top of the greenhouse. The plants can then be cut back, if desired, and will make an equally vigorous second crop with! All florists know, of course, that the regular varieties of Tall Sweet Peas are of no value whatever for forcing,—it early flowers are desired.

Burpee's Earliest White is sold only in its original sealed packets,—and only direct to planters,—none to other seedsmen. The seed is *abundantly packed* and every seed should germinate. Per pkt. of 40 seeds, 25 cts.; seven pkts., 5 pkts. for 75 cts. net. Half size 14 cts. Per pkt. 20 seeds, 15 cts.; 2 pkts. for 25 cts.; 10 pkts. for 75 cts. net.

Burpee's "Blue List" for 1906 is now ready to mail. This is our complete catalogue of wholesale prices for the choicest flower seeds for florists and the finest vegetable seeds for market gardeners. Any florist or market gardener who does not receive a copy by February 1st, should apply for same immediately.

W. ATLEE BURPEE & CO.,

PHILADELPHIA.

SEED TRADE.

The dwelling house of W. R. Bishop, seed merchant, Burlington, N. J., was damaged by fire on the 21st inst. to the extent of \$800.

Conrad Appel's Report.

Conrad Appel's Darmstadt report on the new crop of German tree seeds is as follows:

Quercus pedunculata.—A very small crop, and prices have been higher than years before. Quality satisfactory.

Quercus Robur had no crop at all; however, there are offered under that mark common oaks, therefore the purchaser must be very careful in buying.

Quercus rubra had a plentiful yield, and best quality is offered this season at a low figure.

Fagus sylvatica suffered under unfavorable conditions of the weather, but in December, beech's harvest month, the dry, cool weather has been of advantage for the saving of the seed.

Most of the other deciduous tree seeds gave poor results only, so the two sorts of Acer, Norway maple and sycamore, alder and white smooth alder, birch, haws, ash and the two limes (large and small-leaved). Hornbeam are plentiful. Broom and furze had a small crop only, and elms are a perfect failure this year.

Regarding the yield of the evergreen tree seeds, *Pinus strobus* delivered this year a good crop of cones, but the produce of seeds were only small, and seeds of highest growth will surely be in strong demand.

Pinus cembra is in good quality, harvested and on the market at low prices.

Abies pectinata had a good average crop, both in quantity and quality.

The crop of *Pinus sylvestris* is only beginning just now, and I expect it will only yield an average crop.

Picea excelsa has had a crop only in districts that are remote from here, and it is apparently quite a good result, for which reason prices for good quality are low.

Larix Europæa had only a small crop in Tirol, and I expect it will experience a heavy demand this season.

The other evergreen seed trees, as *Pinus Austriaca*, *Pinus maritima*, *Pinus montana*, *Pinus laricio*, for which kinds the demand is only small, had a satisfactory crop, and are offered at normal prices.

CATALOGUES RECEIVED.

Dingee & Conard Co., West Grove, Pa., "1906 Guide to Rose Culture." Roses in rich colors on a gold background adorn the cover, and handsome colored plates of roses, chrysanthemums and hardy phloxes are inserted, making an attractive as well as useful manual.

Thomas Meehan & Sons, Inc., Germantown, Philadelphia, Pa., "Ornamental Hardy Plants of the Better Class." A spray of "White Fringe" forms the cover attraction and very sweet and pretty it is. The contents are of the right kind and written in just the vein to make the garden owner long for the spring time to come.

H. E. Fisher & Son, florists, Worcester, Mass., will occupy the east side of the new street railway waiting room on Park street, about February first.

DREER'S Reliable FLOWER SEEDS

New crops of almost all varieties are now in hand
and early orders are solicited

Among the many Flower Seed specialties which we handle none receive closer attention than we know our stocks of these to be the finest procurable at any price. We offer below a few of the most important kinds. For full list see our catalogues for 1906, free on application.

CLUB AND SOCIETY NOTES.

The annual installation feast of the New Jersey Floricultural Society will take place on February 2, at 8 o'clock, in Orange, N. J.

The Rhode Island Horticultural Society held its annual meeting on January 17, and reports showed a prosperous year. It was voted to assess each member \$1 for yearly dues. Marcus M. Burdick was re-elected president, and Charles W. Smith, secretary-treasurer.

The second lecture in the American Institute course, New York City, was given January 24 at 3.30 p. m. in the lecture room of the Institute, Berkeley Lyceum, by George T. Powell, President of the Agricultural Experts Association, who discussed and illustrated "The Propagation of Trees and Plants."

The Cincinnati Florists' Society will have a special exhibition of roses on February 10, 1906. Prizes will be offered as follows: Best vase American Beauty, 12 blooms, 1st prize, \$10.; 2d, \$6.; 3d, \$4.; Best vase Bridesmaid, Bride, Meteor, Perles des Jardins, Golden Gate, Ivory, Liberty, any other variety, 25 blooms, 1st prize, \$4.00; 2d, \$3.00; 3d, \$2.00, respectively. Best display of violets, 1st, \$6.; 2d, \$4.; 3d, \$3.; best general display, \$10.00

At the meeting of the Gardeners' and Florists' Association of London, Ont., on January 13, the following officers were elected: President, R. Dengate; vice-presidents, W. Trott, A. McInnes; secretary, T. Wistrow. Dissatisfaction was expressed that government grant to vegetable growers of Ontario should have been monopolized by the Toronto growers, and the society have laid their claims before the Hon. A. Beck, M. P. P.

The Horticultural Society of New York has arranged for a Carnation Night on February 14, in the rooms of the American Institute, New York. Exhibits of novelties are especially solicited and there are money prizes offered for displays in the several color classes. Robert Craig of Philadelphia, will address the Society at 8 p. m. in the evening on "Carnations, Old and New." Any one having blooms to exhibit should address Leonard Barron, 306 West 119th Street, New York City.

The Nebraska State Horticultural Society held its annual meeting at Lincoln, Jan. 16, 17 and 18. Officers were elected as follows: President, J. H. Hadkinson of Omaha; vice-presidents, H. S. Harrison of York; C. H. Green of Fremont; directors, W. G. Swan of Tecumseh; A. J. Brown of Geneva; J. A. Yager of Fremont; secretary to be elected by the board.

The display of cut flowers was remarkably good. Prizes were awarded to L. Henderson of Omaha; Frey & Frey of Lincoln; and E. W. Dole of Beatrice. The summer meeting of the society will be held in Omaha in July.

CUT FLOWERS

PHILADELPHIA CUT FLOWER CO.

Wholesalers of Cut Flowers

1516 AND 1518 SANSOM ST.

VICTORY

The most brilliant scarlet carnation. Requires only ordinary culture. Is a fancy in the fullest sense of the word and wholesaled at \$25.00 per 100 at Christmas.

Cut Flower Market Reports.

FAVORABLE WEATHER
BUFFALO brought on the stock in good form, and a good week's business was done. White flowers were much in demand and cleaned up well. Carnations, tulips and bulbous stock were had in abundance and moved rapidly. Beauties were scarce, although there was no special demand, while select Liberties, Richmonds, Bridesmaids and Brides were sold at sight. There was a good demand for violets, lily of the valley, mignonette, and sweet peas.

CINCINNATI Continued dark weather has lessened the supply of cut flowers and really first-class stock is difficult to obtain. Roses and carnations especially are showing the bad effect produced by the lack of sunshine. Judging from the appearance of the plants there will not be anything like a surplus of roses for some time to come. Business continues brisk and consequently prices are near the top notch. A few good sweet peas have arrived but not in sufficient quantities to meet the demand. The quality of violets was never better and vast numbers are sold each day. There is not a great variety of flowers in the market just now and anything that might be termed a novelty is quickly snatched up at a good figure. The storemen say, "Why don't you grow this and that?" The grower replies, "You won't pay the price when we do grow them;" and so it goes, we have roses, carnations and a little bulbous stock until we are anxious for a change.

LOUISVILLE The conditions of business the previous week were very good. Carnations had an enormous demand, which was beyond the supply. The quality remains good. Roses have had a great demand, the quantity and condition of stock being up to expectations. Lilies of the valley find a very good demand. Narcissus, hyacinths, and other seasonable stock move satisfactorily.

BELATED MARKET REPORT.

Christmas business in Des Moines, Ia., as summed up from a personal canvass of the various florists, was fully 25 per cent greater than last year. This, in view of the fact that only a short time before Christmas, one of the most elaborate flower stores in the state of Iowa was opened in the most prominent location on the principal business street, makes the increase of business to each individual peculiarly gratifying. Another remarkable thing was that only a week

before Christmas fire had broken out in the basement of Lozier the Florist and destroyed his entire stock-in-trade, including a large supply of ribbons, also fixtures and all the appurtenances necessary to the conducting of business. The store room was so damaged that it was impossible to open up there again, but he finally succeeded in getting a new stand near the old one. This room too had suffered from fire, but the unsightly spots were hidden as best they could, and in the face of all these difficulties a better business was done than any Christmas before. Des Moines has not been considered a very lavish flower-buying town, but these facts would tend to show that it is improving. There was a good supply of all classes of flowers and plants, which sold for satisfactory holiday prices. The demand for azaleas, cyclamens and plants in bloom generally was good. The quality of holly was fair and it was pretty well cleaned up. Despite the fact that the price of green was high early in the month, enough was finally received at moderate prices to equal the demand. Christmas trees were a drug.

WM. TRILLOW.

NEWS NOTES.

Misses McNamary and Evans, recently with Messrs. Arnold, have started in business in Omaha, Neb., at 15th and Farnum streets.

C. W. Moeckel, florist, of Fitchburg, Mass., has been awarded damages in the sum of \$1,277 for injury to his greenhouses caused by the explosion of an oil tank near the Fitchburg gas house two years ago.

The Fernery was incorporated on January 11 in Baltimore, Md., with a capital stock of \$15,000, divided into 1,500 shares of \$10 each. The incorporators are Charles M. Ackerman, W. D. Allen, Frank V. R. Viers, W. M. Jordan, and H. W. Nice.

GREENHOUSES BUILDING AND PROJECTED.

Whitman, Mass.—Robert Moir, one house.

Portland, Me.—J. W. Minot & Son, one house 40x150; boiler house 20x65.

Queens, N. Y.—Cottage Gardens, one house 45 1-2x300, two houses each 45 1-2x355, one house 21 1-2x142, under contract with the Burnham Hitchings Pierson Co.

LIST OF PATENTS.

Issued January 16, 1906.

809,972. Grub-Puller. Samuel F. McGown, Dial, Ky.

810,313. Fruit Carrier. Charles A. Wellman, Ottumwa, Iowa.

810,344. Lawn Trimmer. Edward Pierce and Edward Laux, Burlington, Iowa.

A NOTABLE PHILADELPHIA EVENT.

The formal opening of the Samuel S. Pennock annex building took place on the 22d inst. A distinguished company of the leading florists of the vicinity, and many from distant points were present. John Westcott was the leading speaker, and in tracing Mr. Pennock's business growth and congratulating him, took occasion to lay before his audience a history of the development of the cut flower industry during the past fifty years. Mr. Westcott was at his best and did justice to his subject. Charles Fox, one of the oldest florists in Philadelphia, was among the speakers, and gave some interesting reminiscences of bygone days while congratulating the distinguished host on keeping his end up. Edwin Lonsdale's speech was something about marching up and then marching down again, and getting stuck in the middle. Your scribe could not make any sense out of it, but the audience seemed to take it all right. Henry F. Michell responded for the seed trade, and said that he was greatly pleased to see a branch of the business closely allied to his own growing and prospering so well. He admired Mr. Pennock especially for his obliging ways. He had never asked Mr. Pennock for a favor but it had been granted. Robert Kift responded for the horticultural press in his usual able manner. Mr. Martin, Mr. H. N. Willits and a number of others spoke. The host himself gave a most modest account of himself and was contented with stating the barest outlines of his career. But that's what we always expect of Mr. Pennock, and his understatements were all put to his credit.

The main floors of the combined buildings were tastefully decorated with foliage and flowering plants, cut flowers and evergreens. E. J. Fancourt was master of ceremonies, and acquitted himself in his usual able manner. The employees from the store, from Clarence J. Watson, the manager, down to the humblest, did their utmost to entertain the visitors.

BELATED MARKET REPORT.

The business of the late Mrs. A. B. Machlin of Harrisburg, Pa., will be continued by the estate, with Mr. C. Uttley in charge.

The William Graham Co. have moved from 108 South 13th St., Philadelphia, to the store occupied until recently by the Hugh Graham Co., having purchased the retail end of the latter concern which they will operate in conjunction with their own business. The Hugh Graham greenhouses on York Road will be run by Mr. Irwin, a brother-in-law of Mr. Graham.

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C.,
 Florists' Convention. For simplicity, durability and per-
 fect satisfaction it has them all guessing. It is
 in a class by itself. To see it work a large
 plant as well as a small will convince the
 most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still
 leads as the most durable, easiest working and the
 all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over
 12,000 feet sold thus far this season. Catalogues free.

 BOROUGH OF BROOKLYN, N. Y. CITY

Another Particularity

We told you a week before the **Carnation Number** about our "soak in" method of priming our greenhouse materials, but

we didn't say all we should about the value of the ends soaking up the paint too. Paint is not merely a matter of decoration, it's a **preservative**!

Then by our method **every part** of the wood is protected with a preservative. Preservation first, decoration afterwards! Now you can't get around the point that the best materials possible will make poor enough houses if not handled the best possible.

The life of your house, its freedom from repairs, depends on **starting right**

It costs, this starting right, but it costs a lot more if you don't start right. It costs all through the life of your house. Send for Catalogue J-G.

CARNATIONS ROOTED Cuttings

White Perfection

Pure White. The most satisfactory white carnation ever offered to the trade. A true florist's variety that is of the largest size and best form. It leads in production of blooms and the habit is perfect. It is the first in bloom and at all times throughout the entire season gives an even cut of flowers that cannot be equaled by any other variety. It opens quickly and does not burst the calyx. It is perfectly healthy in every respect. The orders booked to date exceed the sales of any white variety we have yet sent out. Place your order early. **Price, \$12.00 per 100; \$100.00 per 1000.** We have a large stock and cuttings are of the best grade.

We can supply **Robt. Craig, Victory, John E. Haines, My Maryland, Candace and Glendale** at introducers' prices — \$12.00 per 100; \$100.00 per 1000.

We have **Lady Bountiful** and **The Belle** in quantity. Write for our prices for strong, well rooted cuttings. Our price list will be mailed on request.

F. Dorner & Sons Co., LaFayette, Ind.

MY MARYLAND

ANNOUNCEMENT TO THE TRADE:

We, the H. Weber & Sons Co. of Oakland, Md., respectfully announce that The E. G. Hill Co. of Richmond, Ind., have withdrawn from the contract made with us last Spring whereby they would have jointly with us, disseminated our new white carnation, My Maryland.

The variety has been on trial at Richmond, (3,000 plants), Brooklyn, (300 plants), Philadelphia, (1000 plants) and Toronto, (1000 plants).

Reports from the first two named places characterize the variety as being practically worthless, while from Toronto and Philadelphia favorable reports indicate that the variety is bearing out our claims for it.

Our own stock at Oakland is in elegant shape. An ex-

temely wet Summer necessitated the holding of stock in a semi-dormant condition after being housed Aug. 15th to Sept. 1st, thus making stock too late for the Fall shows. Since Dec. 1st we have been cutting grand blooms, and to prove our claims for the variety we invite all interested to come to Oakland and look it over. While it is a source of regret to us that the variety has not proven satisfactory in all places tried, we are satisfied that it will prove our claims for it in at least some places besides our own.

We therefore announce that we will disseminate My Maryland as per our advertisements, but before shipping any stock we give to each and every one the right to cancel all or any portion of their orders.

JESSICA, we believe will succeed everywhere. It is even better than last year. As a red and white it has no competitor. Stock ready now. Price for both varieties \$2.50 per doz., \$12.00 per 100, \$100.00 per 1000.

THE H. WEBER & SONS CO., = = Oakland, Md.

HANNAH HOBART

THE PRIDE OF CALIFORNIA.
THE GRANDEST OF PINK CARNATIONS.

A shade deeper than Lawson, blooms four to four and one half inches across, full and regular. Stems long and strong. Does not burst the calyx. Growth free and easy. A prolific bloomer. Its flowers a wholesale for a higher price than any other carnation in the San Francisco market. (See illustration and full description in Horticulture of July 1, 1905). Orders for rooted cuttings booked now and filled in rotation beginning January 1, 1906, at \$3.00 per 12; \$15.00 per 100; \$120.00 per 1000.

SOLD BY SEED DEALERS OF AMERICA

A New and Valuable Cyclamen

CYCLAMEN LOW'S SALMON

The accompanying illustration shows a new and beautiful cyclamen called Low's Salmon. The flowers are of a new and distinct shade of color so far as cyclamen persicum varieties are concerned. They are of the giganteum type and of clear salmon or salmon-rose color. It has been put on the market by Messrs. Hugh Low & Co., who say: "We have no hesitation in describing this as the finest cyclamen sent out during late years." The habit of the plant is vigorous though compact, as may be seen from the illustration and the blooms are produced quite clear of the leaves upon stiff straight stalks. Messrs. Low & Co. say that this is not merely a fancy sort, but a first-class market variety and we are of opinion that it will prove a valuable plant. The color of the flowers is such that it is said to show to even better advantage under artificial light than in the day time. It was shown by Messrs. Low before the Royal Horticultural Society recently and everyone admired the coloring of the flowers.

American Trees In Europe

Enclosing a letter from the Town Clerk of Glasgow, Scotland, conveying a note of thanks from the Corporation of Glasgow for a recent gift of a collection of American oaks and other trees and seeds for the Botanical Gardens there, our friend Mr. W. R. Smith writes us the following communication which will doubtless prove very interesting to the many tree lovers among our readers.

The enclosed is from the Corporation of Glasgow. I was the invited guest of the corporation at their annual inspection of parks, in company with Bailie Bilsland, now Lord Provost, and the very able and intelligent Superintendent of Parks and Curator of Botanic Garden, Mr. James Whitton, last summer. I then noticed the great dearth of American trees not one soft maple (*Acer dasycarpum*) a tree of which we have planted twenty thousand in the streets of Washington, and no oaks. On this subject I wish to make a remark; the white oak I could not find anywhere in the Botanic Gardens in Europe.

When in Berlin some time ago the Curator there put this question to me, "Do you know in America an oak called *Quercus albus*?" Startled at this question, I asked "What of it?" "That is what I want to know, what about it? I have gotten for many years beautiful seed, but never one will grow." The white oak and the soft maple seed cannot be exported. Acorns of the white oak and the seed of the soft maple begin to grow as soon as they reach the ground. By gathering the acorns, the root is broke off and the acorn is useless for propagating. It is the same way with the chinquapin (*Castanea pumila*). We missed our *Platanus occidentalis*, one or two plants of *P. orientalis*, our sweet gums, our sour gums, our tulip trees, our American elms in variety and many other interesting American trees and shrubs, that we are certain, under the judicious management of Mr. Whitton, shall have a fair chance as to the adaptability to the climate.

We sent seeds and plants of the *Salisburia* (Loudon), many years ago, suggesting this tree for the smoky climate of London. Smoke is Mr. Whitton's greatest bugbear and this tree, thriving so well, as you know, on the hillside of Boston's Public Grounds where the smoke is, of course, not as bad as the smoke in London and Glasgow, it is hoped will be as successful as that tree has been in Boston for over a hundred years.

I shall have something to say about the terrible disease that has attacked the larch. The question of heredity and the care necessary to select proper seed, will make an interesting theme for some future communication.

Yours very sincerely,

Harry H. Thomas

W. R. Smith

Cultivation and Care of Young Rose Stock

I presume that by now every successful grower has his rose stock started for another year and some potted in their first pots and that some of the earliest are ready for a shift into larger pots. If in two-inch pots a shift to three-inch pots is sufficient, and when potted greater care and attention to watering is essential. Do not over-water them; rather go over the benches two or three times a day giving attention to the dry plants, than to give them all a general watering whether they need it or not. Do not forget to syringe thoroughly every bright day and even on some days when there is no brightness. Syringe young stock often and thoroughly as the red spider does like to get in his work on young stock, and always bear the fact in mind that you are starting up young stock for another year's flowers and that whatever you omit to do now you will suffer from at flowering time next season. It is not often that I use Biblical phrases, but this one suits the case in hand that "whatsoever a man soweth that shall he also reap." So, also, if you start good stock and look after it properly you shall be cutting good flowers next season.

When repotting young stock from twos to threes is a good time to grade your stock for no matter how careful one is there are always some weak plants. Get these weak ones together in one part of the bench so you can give them a little more careful attention than is given the general lot. When potting is also a good time to add a little fertilizer to the soil; pure ground bone, pulverized sheep manure, blood and bone mixed, or separate, and lots of other fertilizers are used for this purpose. For myself I prefer blood and bone mixed. It comes in one hundred pound bags already mixed and a four-inch pot full to a bushel of soil is about right. In a few days after repotting you can almost see the stock growing.

The temperature in the plant houses can be raised a little, too, after repotting, or when well-rooted through in twos. A temperature for nights of sixty-two and days seventy to eighty with plenty of ventilation is about right, but watch the ventilators for any change in the weather. Do not let the plants get chilled or a cool draught strike them at any time or you will see an immediate retarding of growth. Plants in bench which have been given a partial rest for the last three weeks can be started up slowly by keeping them a degree or two warmer at nights and applying a little more water to the roots than we have been doing for the last month, but do not be in a rush with them; start them up slowly and you will cut more and better flowers than if two hasty with them.

If you intend to run a house or two of American Beauties over summer (and I will say there is always a good demand for good American Beauties and good prices for them in June, July, and part of August) now is a good time to get ready for them by cutting the plants down to fourteen or sixteen inches from the soil. No need to replant them in fresh soil; if your soil is a little soured give it a slight scratch over the surface and apply a top dressing of unslacked lime and that, with the drying out and rest they have had, will enable them to start out nicely. Don't start them too hastily; at first fifty-six to fifty-eight at night is enough for them and plenty of air during the day in cloudy or bright weather in a temperature of sixty-five to seventy will bring them along nicely. Syringe frequently in bright days and do not let the wood shrivel up or it will be all off. I will have more to say on this later on as the season advances.

Wm. Scott

Odontoglossums

Odontoglossum crispum and kindred species, *Pescatorei*, *Lindleyanum*, *triumphans*, *odoratum* and the many natural hybrids supposed to be the results of intercrossing of the species already named can be so successfully grown in New England, in fact are grown so well that some collections though perhaps not quite so extensive, and perhaps do not include such rare varieties, compare favorably with European collections.

They may be seen doing well under several methods of treatment; no two growers have exactly the same ideas, but to insure success a dry atmosphere in winter and a close atmosphere in summer should be avoided.

The low temperature in winter necessitating strong fire heat is as important a matter for consideration as the humid heat of summer. A fixed winter temperature is not advisable. Grown in a sunny position from September until early in March the temperature may be allowed to run up with sun heat but the atmospheric moisture should be maintained at the same time and in cold weather the night temperature may fall to 45 degrees Fahrenheit. It is maintained in zero weather by fire heat too much attention cannot be given to the maintenance of a close atmosphere night and day. Under these conditions pseudo-bulbs will not shrivel and lose their vitality. The moisture in the atmosphere will act as a safeguard against thrips, the worst insect pest of the grower's collection. "Eternal vigilance" is certainly the price of many *Odontoglossum* spikes.

The excessive humidity for a while in summer is trying to the plants. The heat alone could be remedied by the evaporation of water, but accompanied

as it generally is by humidity it is difficult to produce evaporation in an atmosphere already saturated.

At this time *odontoglossums* are liable to attacks of fungi which attack and cripple the young growth. This is not noticeable until some time afterwards when the apical portion of the first leaves which have been punctured refuses to expand naturally. The inner leaves become contorted giving the growth a crippled appearance. We at first attributed this to thrips, but noticing a rather rusty appearance on the leaves, we showed it to a well-known morphologist and microscopist who pronounced it fungi.

It may be that the spores gain entrance through the punctures made by insects, but it is more likely that the moist surface of the young growth offers just the right conditions for the growth of the spores as well as a convenient resting place. The remedy would be to keep as free a circulation of air around the plants as possible. Last summer we took out the glass entirely from the end of the north house nailing up cheese cloth in its place. The results, we thought, repaid the trouble.

The question of compost is one upon which there is a great diversity of opinion. Much may be said in favor of fern fibre, but a medium we have tried and can recommend is Belgian leaf-mould. Nearly all European growers use it either pure or in mixture with excellent results in each case.

James Hutchinson

Pollination

To explain the meaning of this word so that it may be intelligible to some, it may be necessary to remark that pollen is the fine powder which falls from flowers when they have arrived at a certain stage of maturity and are shaken by the wind, or it may be carried by insects from one flower to another.

Pollen is contained in a little sack called the anther. To the naked eye it appears only as a mere powder, but under the microscope it is found to consist of grains of uniform size and shape, in the same plant, but different in all the different species. Their color is usually yellow or brown, but in the *epilobium* and *polemonium* it is blue, and in the *mullien* red. One curious fact is worth recording, as showing how wonderfully nature, or more properly speaking the Creator, has provided against possible dangers. Thus moisture is peculiarly noxious to pollen because it bursts the tiny grains before they can perform their office, which I will notice further on, and for this reason so many flowers drop or close their petals when moisture prevails. The drooping of the snowdrop is a familiar example, and the *anagallis* or *pimpernel* is called the poor man's weather glass, because it closes its petals at the approach of rain.

The greatest observer of Nature, Linnaeus, remarked that flowers lose this state of delicate sensibility after pollen is gone. This pollen must be brought into immediate contact with the pistil which is the female organ of the plant, bearing the ovules, which when acted upon by the pollen become fruit and seed. As soon as the pollen unites with the ovules, fecundation, or the generative excitement of the rudimental principles of the seeds of plants and of the embryo of animals commences. This is the starting point in the life of the individual. In plants, the pollen must be brought into contact and union with the ovules before seed can be produced, and this is called pollination.

Self-pollination is when the pollen is conveyed to the pistils of the same flower, to pistils of other flowers on the same plant, or to pistils of other plants of the same variety which have been propagated by grafts, cuttings, &c. Cross pollination means the conveying of one flower to the pistils of flowers of plants of a different variety; it also means the transfer of pollen to the pistil of another plant of the same variety.

Pollination may be effected by natural agencies, as wind, insects, or birds, or by scientific, or artificial processes. It is by the latter that new and improved varieties are usually obtained with wonderful accuracies and success.

Some plants are self fertile, that is to say, have perfect male and female organs in the same flower, and these are capable of self-fecundation; others, called pistillate plants, are those which have only the pistils or female organs, and these remain infertile unless operated upon by the pollen of other plants.

Strawberries have many varieties which have the pistils only, and these will not produce fruit satisfactorily,

if at all, unless acted upon by the male pollen. In planting a strawberry bed care should be taken that the varieties used should not all be pistillate.

By experiments it has been established that sterility exists in a great variety of fruits, and one reason for their not producing is that they were not pollinated; and another fact exemplified is that the fruit produced by self-pollinated flowers is not so perfect as when cross-pollinated by pollen from another fruit, even of the same variety.

There is no more fascinating nor profitable part of horticulture than artificial cross pollination, and none so likely to contribute to the comfort and welfare of mankind, and even to the brute creation; he who succeeds in producing an improved grain or fruit is a benefactor, not only to his fellow man, but to all the animals that feed on the results of his labor and skill.

Before horticulture was a scientific pursuit this use of pollen was not taken much notice of; seedlings were raised without any reference to its effect, and if one variety proved of superior excellence it was by mere chance, but now the enterprising, enthusiastic and well informed horticulturist goes to work to improve varieties of fruit and grain, or to make changes in the habit of growth, form, and color of flowers by a system of artificial cross-pollination and selection with the most certain and beneficial results, not only to his own advantage, but to that of the whole community.

A. R. Gilbert

More About Two Troublesome Insects

In addition to the information about the two species of red spider given in a recent issue of *HORTICULTURE* I may now add the following: Hydrocyanic gas used at the rate of 1 oz. cyanide of potassium to each 1000 cubic feet, failed to kill either variety of the spiders. It did kill the white fly, green fly, scales, some mealybugs, saw bugs, snails and some angleworms, but all kinds of spiders and ants are as lively today as they have ever been. Some of the houses were dosed with the gas two nights in succession, but not a single spider was killed.

The damage done to plants by the gas was slight. Out of nearly six hundred plants of *phalænopsis* only about a dozen were damaged. *Cœlogyne cristata* suffered most and *Oncidium concolor* had nearly all its leaves disfigured. The damage in most cases was not noticeable until from three to ten days after the gas had been applied.

WM. J. STEWART, Editor and Manager.

Boston and her visitors Boston has been honored by the attendance of a large number of the most enterprising and intelligent florists from remote points during the past week. Many had never visited Boston before and the historic riches and traditions of the city were intensely interesting to them. As Mayor Fitzgerald truly said, the effect of such a visit could not but make of everyone who participated, a better American. Come again and again.

Effects of the mild weather It is many a year since the eastern half of these United States have been treated to such a winter as we have had up to date. In the vicinity of Boston lawns are almost as green as when frost overtook them. Tips of rose branches still bear foliage and in sheltered sunny spots are actually growing while the young buds down the stem are swelling and ready to break out. However, we know not what a day may bring forth and by the time these lines are in print the face of nature may have undergone a change. It will be fortunate for the spring-flowering material if this unseasonable weather stays not too long.

The coming Rose Show The next important horticultural event will be the meeting and exhibition of the American Rose Society which is now but seven weeks away. Like the carnation show this also comes to Boston this year.

The wide diversity of types, in the outdoor and indoor, the commercial and amateur classes, which the extensive prize schedule provides for will make this exhibition something extraordinary, not to mention the great annual spring show of the Massachusetts Horticultural Society with which it is to be associated. The pilgrimage to Boston from all parts of the country on this occasion will be a large and representative one, for the Queen of Flowers has myriads of devoted subjects, and Boston's welcome will be a hearty one.

The farmer and the forest The agitation to secure government co-operation in the preservation of the remnant of the White Mountain forests gains strength every day and the prospects are fairly hopeful. Congress can be relied on to respond when evidences of a wide-spread popular demand for action on any special subject are forthcoming. The greatest drawback to accomplishing this is the apathy of the rural population.

To the average farmer the woods are an obstruction in the way of tillage and the first step in "improving" his land is to get rid of the forest. The advance in the value of wood as it grows scarcer will eventually bring the rural population to a realization of the need for its preservation after the mischief has been done and the loss irreparable. In the meantime it is as hard to get the farmer interested in forest preservation as to get Sydney Smith's proverbial joke into the understanding of a Scotchman.

Advancing the carnation's interests

The American Carnation Society has done a great deal and noble work in the development and improvement of the carnation during the years of its existence. The indications are that, like all organizations that aim to advance and not stand still on the glories of the past, efforts will be put forth to extend the activities of the Society on lines hitherto unmolested. To the really earnest seeker there are abundant openings and there will always be found plenty to engage the attention of those willing to work. A problem of vital interest to the carnation grower is how to raise the standard of price for cut blooms to where an adequate return for the production of high-class stock may be had all through the year. No better means to this end can be devised than frequent public demonstrations of the art such as the great Boston exhibition which has just closed. Educate the people away from the notion that the carnation is a "common" flower and educate them still further, by these displays of the higher grades, so that they will insist on having such when they buy and be satisfied to pay the difference in price.

Where the small exhibitor stands

Our New York contemporary, commenting on the address of President Fisher before the American Carnation Society, expresses its views as follows:

"Mr. Fisher believes that 'the most serious menace to the usefulness and progress of our society lies in the staging at our exhibitions of varieties that have little or no commercial value.' This, we presume, has a more direct bearing on novelties, and may be regarded, and well taken as a hint to those who think their 'own crow blackest,' and have faith enough in their belief to place their productions on view alongside those, measured by which they fall a long way short, and help generally to detract from the excellence of the exhibition as a whole. The rebuke is merited; and it should be heeded."

We cannot endorse these sentiments nor do we believe that Peter Fisher intended to be understood as rebuking a brother florist for having the audacity to place his productions on view alongside those of his more experienced and successful fellows. "Despise not the day of small things" is a bit of old-fashioned advice not out of place when considering the novelty classes in a professional exhibition. Here lies the best field of such a society as the American Carnation Society in its capacity as an educational instrumentality. Here the best of lessons may be learned through the opportunities for comparison—the lesson of humility and the lesson of courage to try again. The man with "his own crow blackest" is the stock from which will evolve the successful man of the future. His inferior exhibit will not detract from, but rather enhance, the perfect points of his competitor's product. Failures are as useful educators as are successes and the society will make a great mistake in adopting any such proscriptive policy as the above quotation seems to advocate.

OBITUARY.

John Reck, well known for many years as a leading florist of Bridgeport, Conn., died on January 24 at the German hospital in New York City, where he had undergone an operation for the removal of a leg. Mr. Reck received a kick from a horse last summer and, gangrene setting in, amputation was necessary. His constitution had been so weakened by the long illness that he was unable to survive the shock.

John Reck was a native of Nuremberg, Bavaria. He studied floriculture in the best private and commercial establishments, and was a thorough

JOHN RECK.

master of his art. On first coming to Bridgeport he took position as a private gardener, but later bought the floral business of Mr. Varvene, which he conducted until the time of his death, his son being latterly associated with him in business. Besides his son Carl, he leaves a widow and one daughter. Two other daughters died close together a few years ago.

The funeral took place on January 27, services being held at St. Augustine's Church, Bridgeport. Floral tributes were sent by every florist in the city, many of whom were present at the funeral.

Harvey Lyon, of the nursery firm of Comstock & Lyon, died in Silvermine on January 20, in his seventy-fourth year. Death resulted from a stroke of paralysis. Two daughters survive him.

A CORRECTION.

In the report of the Carnation Show last week the award to vase of 50 blooms, crimson—2d Bowker & Co., Cambridge, should be Backer & Co., Billerica. Also the award for vase of 50 blooms yellow varieties—1st Patten & Co., Billerica, should be Backer & Co., Billerica, with Eldorado.

CALIFORNIA NOTES.

W. M. Gabrielle, a gardener, 42 years of age, was struck by an electric car this week, sustaining a fracture of his skull and two broken ribs. It is thought he may recover.

J. F. Smalley, editor and publisher of the Northwestern Californian, which has been running here for about three months as a horticultural weekly devoted to the interests of the coast counties, was arrested this week on a charge of obtaining \$500 from Edwin H. Ives by false pretence. He is the son of P. J. Smalley of the St. Paul Dispatch.

The trial of D. W. Helm, a prominent horticulturist of California, for murder has resulted in his acquittal. He had shot a Japanese whom he caught stealing in his Pomona orange orchard and pleaded self defense. As a result of this trial orchardists are getting together for the purpose of having the law amended by the next Legislature so that fruit stealing will be made a felony.

The seasonable rainfall in Southern California is greater than last season at this date, but elsewhere throughout the state it is still considerably less. Growers find the weather conditions ideal from their view-point. Warm weather has continued all the week throughout the state and plowing and seeding has been resumed since the preceding all-week rain and the grain acreage is being materially increased the soil being so thoroughly saturated as to practically insure good crops.

KENYON L. BUTTERFIELD.
President-elect Mass. Agricultural College.

PERSONAL.

Emanuel Tillman Mische has opened an office at Madison, Wis., for the practice of landscape architecture and has assumed executive connection with the new park system. During the past nine years Mr. Mische has been a principal assistant with Olmsted Brothers, Brookline, Mass.

Mr. Alfred Dimmock, the European representative of the Yokohama Nursery Co., under the direction of Messrs. Suzuki & Iida, 31 Barclay street, New York, has opened offices at Craven House, Kingsway, London, and will be pleased to receive his American friends and give them any information along horticultural lines that they may require during their visits in that city.

THE LATE J. A. BUDLONG.
See Issue of Jan. 27, Page 99.

THE "HOLLY-CASTLE" TRIP.

One of the most enjoyable as well as instructive incidents of the Boston Carnation Convention was the trip to Mr. Matthews' greenhouses at Dorchester on invitation of the Holly-Castle Company to see the electric circulator in operation. The party filled a special car which had been provided, and after a pleasant five-mile ride, the big greenhouse was reached and the business of demonstrating the workings of the circulator was promptly taken up. The manner in which the sluggish water responded to the little device the moment the power was turned on was a revelation to the visitors, all of whom followed the operation closely and watched its effects with intense interest. But one view was expressed by all—that the machine did all that was claimed for it. Refreshments were served and congratulatory speeches made.

"Who are you anyway?" said the peach, turning up its nose at the apple. "I want you to understand," retorted the apple, "that I came from a branch of the first family."—Boston Transcript.

NEWS OF THE CLUBS AND SOCIETIES.

TARRYTOWN HORTICULTURISTS DINE.

The annual dinner of the Tarrytown Horticultural Society took place at the Florence Hotel on Wednesday evening, January 24.

No dinners anywhere are served better than those at the Florence Hotel. The village is exceedingly fortunate in having a place of this kind, managed as well as Mr. John Hennessey manages the Florence. It was a well selected menu and elegantly served. Mr. Hennessey tried to keep it in character by obtaining butter from the buttercups that grow in the meadows by the brooks, milk from the milk-weeds of the fields and oysters from the oyster plant. He made a diligent search for the "ham tree" about which much has recently been said in New York City but it was unavailing. Its whereabouts could not be located although search was made in the sandwich forest and among the bread fruit and plum tart bushes. The dinner was as horticultural in character as a horticultural dinner could well be.

There were present about sixty members and guests. The tables were decorated with handsome roses and carnations, among the latter being some beautiful examples of the new variety, Winsor; for which Mr. F. R. Pierson recently paid a large price. Mr. Scott donated a beautiful Begonia Gloire de Lorraine, of his own raising—the most exquisite plant of this kind we ever saw.

After the feasting was over, Mr. Edward W. Neubrand, secretary of the society, called the diners to order and introduced Mr. Frank V. Millard as toastmaster, a position which he filled with great satisfaction to the society and his friends.—Tarrytown, N. Y., Record.

NASSAU CO. (N. Y.) HORTICULTURAL SOCIETY.

The first of the society's annual dinners was held in the parlors of the Oriental Hotel, Glen Cove, on Saturday, Jan. 27. The dinner was set for 4 p. m. Guests and members to the number of forty seated themselves to tables laden with sumptuous viands. After appetites had been appeased, songs were sung, speeches made and jokes cracked, and all present seemed bent on making the evening a most enjoyable one. This they certainly accomplished. There was dominant throughout the evening that spirit of good fellowship and kindly feeling. The spacious banquet room and tables were gayly and artistically decorated with the choicest of flowers. President Harrison presided. The guests included John McNichol, Lawrence, L. I.; J. White, New Rochelle; W. S. Fischer, J. Austin Shaw, J. W. Pepper, A. J. Guttman and J. Low, New York; George Burnett, Jersey City; and F. L. Atkins, Rutherford, N. J. The following gentlemen sent letters of regret: Alex. Wallace, New York; W. J. Stewart, Boston; John Scott, Brooklyn; and G. Anderson, S. Lancaster, Mass. At 9.30 p. m., the company dispersed to the strains of "Auld Lang Syne."

J. F. JOHNSTON.

NEWPORT HORTICULTURAL SOCIETY.

Tuesday evening last, the seventeenth anniversary of the Newport Horticultural Society was celebrated at the Clifton House, Bellevue avenue. About seventy sat down and partook of an excellent dinner well served by Proprietor Adams. During the progress of the dinner a very enjoyable musical program was rendered by Mr. Archie Stark, A. S. Swan, R. Rosson and Master John H. Allan, the latter, John T. Allan's young son.

When the waiters had cleared away the evidences of satisfied appetites from the tables, President MacLellan sanctioned the lighting of cigars and introduced Col. A. K. McMahon as toastmaster of the evening. In this capacity the colonel has few equals, and suffice it to say that he did the occasion justice. The list of toasts follows:

"The Horticultural Society," responded to by A. MacLellan;
 "The State"—Hon. R. S. Franklin;
 "The City"—Colonel Bliss;
 "Our Parks and Drives"—Bruce Butterson;
 "Florists"—Joseph Gibson;
 "Fruit Growers"—James McLeish;
 "Our Gardeners"—David McIntosh;
 "Amateurs"—B. F. Tanner;
 "Vegetables Grown Under Glass"—Arthur Griffin; "The Ladies"—Joseph S. Milne;
 "The Press"—Fred. L. Hammett.

The dinner, enjoyable as it undoubtedly was, was nothing compared to the exercises following. Every one left home with a determination to enjoy the evening, and after they got there they found out they could do nothing else even had they desired. The speeches were instructive, some of them, off-hand all of them. They covered everything bearing on horticulture and other kinds of culture "from 'way back." Some revealed the true cause of non-success, while others showed the road to fortune, and still others disputed good-naturedly between the two extremes.

"Auld Lang Syne" and "America" were sung at the close, and both songs were well sung—considering. Besides the members of the society there were present John S. Hay, representing H. A. Dreer; H. A. Folger, representing Bonnie Brae Nurseries; J. A. Thompson, representing The Thompson Fertilizer Co.; John H. Cox, representing R. Smith, Worcester, England.

Letters of regret at their inability to be present were read from Alex. Wallace, New York; President Butterfield, Agricultural College, Kingston; and W. J. Stewart, Boston.

AMERICAN ROSE SOCIETY.

The complete schedule of prizes offered for the Boston exhibition has been issued and mailed to members of the society. Copies may be had on application to the secretary. Rose growers will do well to consult it, as the list comprises nearly two hundred classes in cut blooms, pot plants, and decorative arrangement, many of these being special premiums of great value. WM. J. STEWART, Sec'y,
 11 Hamilton Place, Boston.

CARNATION NIGHT AT THE FLORISTS' CLUB OF PHILADELPHIA.

At the next meeting of the Florists' Club of Philadelphia to be held on Tuesday evening, February 6, 1906, Mr. A. M. Herr, Secretary of the American Carnation Society will review the Carnation Meeting recently held in Boston, and the committee in charge earnestly request those having some of the bread winners among Divine Flowers to forward same, or better still bring them to the meeting, so that the essayist may use them to illustrate his remarks; besides it will give those who were unable to attend the annual meeting an opportunity to examine them. Kindly forward same express prepaid in care of David Rust, Horticultural Hall, Broad street above Spruce street, Philadelphia, Pa., when they will be properly taken care of and staged. Kindly forward them in time so that they may reach destination not later than Tuesday afternoon, February 6.

EDWIN LONSDALE, Secretary.

FLORISTS' CLUB OF WASHINGTON.

The Florists' Club of Washington, D. C., will meet in the Scottish Rite Hall, 1007 G St., N. W., on Feb. 6th at 8 P. M. An exhibition of carnations and other flowers will be staged by local and out-of-town growers. An address by Prof. A. F. Woods, Pathologist and Physiologist of the Department of Agriculture, on the diseases of the carnation will also be a drawing card. As this gentleman is one of the best posted men on the subject in America, we expect to have a full house. Any grower desiring to make an exhibit at this meeting can send flowers to the Secretary at the above address, express charges prepaid, shipment so timed as to arrive in Washington on the morning of the 6th of February.

THE POSTAL PROGRESS LEAGUE.

This energetic organization has had printed and is distributing copies of an argument in behalf of the substitution of the old and simple United States Parcels Post of 1874, with its uniform rate, 8c. per lb. on all merchandise, for our complex, double-headed parcels service of today, with rates on some classes of merchandise 8c., on others, 16c. per lb. This proposition is strongly endorsed by the Post Office Department. If it commands your support, please have your local club or society adopt the following or a similar resolution and forward same to the chairman of the Committees on Post Offices and Post Roads of the United States Senate and House of Representatives:

Hon. Boies Penrose, Chairman Senate Committee; Hon. Jesse Overstreet, Chairman House Committee; also to other Senators and Representatives as may seem to you best, and to Postmaster-General George B. Cortelyou:—

"Resolved, That House Resolution 4549, of the Fifty-ninth Congress, providing for the consolidation of third and fourth class mail matter at the third class rate, one cent for two ounces, as recommended by the Post

Office Department, should be immediately enacted into law."

An overwhelming expression of public opinion is needed if this bill is to pass this winter. Copies of the argument may be had on application to James L. Cowles, Secretary, 346 Broadway, New York.

STATE FLORISTS' ASSOCIATION OF INDIANA.

The State Florists' Association of Indiana, held its annual meeting at Indianapolis, Ind., Jan. 9, 1906. The following resolutions were unanimously adopted:

Resolved, That we recommend that a national color chart be adopted by the S. A. F. & O. H.

Resolved, That a copy of these resolutions be forwarded to Mr. William J. Stewart, Boston, Mass., secretary of the S. A. F. & O. H.

F. SYDNEY SMITH, Sec.

CLUB AND SOCIETY NOTES.

At the meeting of the New York Florists' Club, on Feb. 12, C. W. Ward will deliver an illustrated lecture on carnations.

J. Woodward Manning of Reading, Mass., spoke before the Worcester County Horticultural Society, on Jan. 25, on "Ornamental Trees and Shrubs." Mr. Manning classified them according to their uses, and as he read the lists made brief mention of the prominent features of the most desirable.

The annual meeting of the Ottawa Horticultural Society (Can.) was held on January 10. Reports showed a membership of 248. A series of afternoon meetings for practical demonstrations was proposed. Samuel Short and J. F. Watson were elected president and secretary, respectively, for the ensuing year.

GARDEN DECORATION.

The lecture of Loring Underwood before the Massachusetts Horticultural Society on January 20 was illustrated with beautiful views of gardens, fountains and other out-door ornaments. In the course of his lecture he said:

"There is being awakened a realization of the fact that we ought to make more use of the gardens, apart from the pleasure of gathering and caring for flowers, and that is by making them out-of-door living rooms. No matter whether your garden is large or small, there is generally a cosey spot where a summer house would fit in nicely."

Another feature is a fountain, and to supply it with water need not be very expensive. A few fish in the pool keep it free from mosquitoes.

The speaker said that a garden seat is a welcome accessory, and showed some very handsome ones, though not necessarily costly. He spoke of them as making very desirable memorials for town squares and small parks, and showed one such, topped with a sun dial.

"Walls and terraces are to a garden," he said, "what the wall of a house is to its interior."

In closing the speaker said: "I want to call your attention to the great possibilities in this field of garden acces-

sories, as applied to the city back yards. These yards, as they exist for the most part in the homes of our well-to-do people, are a disgrace to the community. Neat some of them may be, but what ugliness is to be seen when one looks out of a dining room window and sees an assortment of clothes and clothes lines, ash barrels, garbage boxes and the like, all up and down the line. Let us hope that the ever increasing regard for our gardens as places that should give comfort and beauty combined will lead to a fuller appreciation of the proper use of garden accessories."

QUEBEC.

Kipling described Canada as "our lady of the snows," and in the winter his simile will apply, but in the summer he might also have characterized her as "our lady of the fruits and flowers," and thus would have given her a fair description. It is true our winters are long and sometimes severe, but the salubrious climate of spring, summer and autumn more than compensate for the length and severity of the winter.

The rapidity of growth of all vegetation is remarkable, especially in some seasons, and although it keeps the farmer and gardener busy to keep up with it and plant their crops promptly so that they will be ready to meet the weather favorable to their rapid development, it has a good effect in making the successful ones watchful and alert, because they must literally "make hay while the sun shines."

Agriculture and horticulture are by no means neglected in this Province. The bureau of agriculture is very efficient and does a great deal to encourage this most important industry. Numerous bulletins and pamphlets on various economic subjects are published and distributed free, agricultural and horticultural associations and farmers' clubs are liberally subsidized, popular lectures are employed, and a series of premiums for the best cultivated farms are awarded.

It is a mistake to suppose that the only agricultural and horticultural products of Canada are those of her northwest or upper Provinces. It is true that some fruits and flowers will not thrive with us as they do there, as, for instance, grapes and peaches, but those which do so cannot be beaten in quality; small fruits, such as strawberries, raspberries, blackberries and currants, are very superior. As to flowers, such as will grow have a peculiar richness of color and wealth of foliage which it would be hard to surpass.

The scenery around Quebec is very beautiful; it is doubtful whether the landscape seen from the citadel, taking into consideration the majestic St. Lawrence, the distant mountains in the extreme background, the gently sloping hills and occasional precipitous rocks, dotted with snug looking farmsteads, the long stretches of green meadows and the miles upon

miles of country that can be seen at a glance, can be much excelled in any part of the world.

The city is built upon a hill which rises precipitously from the St. Lawrence on its northern bank and the natural formation of rocks rendering it impregnable from the river front have earned for it the title of the Gibraltar of North America. On the north side of the city is an almost level plain which stretches for many miles.

The elevation of, what is called, the "Upper-town" is such that vistas of landscape can be seen from one end or other of every street, whether running east or west, north or south. A good deal of attention is paid to gardening. There are several well laid out parks and pleasure grounds, and one on the historical Plains of Abraham is projected. The grounds around the parliament house and city hall are tastefully planted with shrubs and flowers, and the lawns, well kept.

In the suburbs are very pretty residences of the leading citizens and government employees, each with its pretty garden or lawn. The most fashionable thoroughfare—the Grand Allee—is planted on each side with rows of American elms to commemorate the convention of the United States and Canadian forestry associations, held in Quebec in 1892 by the direction of Sir Henri Joly de Lotbiniere, the honorable gentleman who has done more than any one else to foster and encourage Canadian forestry and arboriculture. These trees bespeak by their robust growth, how well the work of planting was done, and will form, as the generations pass, a noble avenue worthy the entrance to the ancient city.

Further out on the St. Louis road are some fine residences and grounds, belonging to the affluent Spencer Wood. The official residence of the Lieutenant-Governor is a specimen of the landscape gardening and architecture of the eighteenth century, is in charge of a most efficient gardener and is always a picture of neatness and order, while the conservatories and fruit houses are replete with well-grown specimens.

Spencer Grange where resides Sir James Lemoine, Quebec's poet, historian and man of letters, is another place which may be described in the same way. Embowered in its groves of native trees and surrounded by pastures is the cozy dwelling in which a gentleman of such a sympathetic nature and who has contributed so much to the amusement and instruction of his fellows might well wish to pass his declining years.

In near proximity are the two cemeteries—Mount Hermon, Protestant, and St. Patrick's, Catholic—both admirably located and well kept.

Space will prevent me from describing at length more of the beautiful estates in this most picturesque locality, but if your readers who enjoy the beauties of nature, the relics of antiquity, a glimpse of the old world without crossing the Atlantic, or love to visit places of historic interest, will make a visit to old Quebec, they will be amply repaid for the little exertion necessary, and will doubtless return with favorable impressions as to this Canada of ours.

GEORGE MOORE.

CARNATIONS IN THE ROCKY MOUNTAINS.

(Read before the American Carnation Society.)

By J. A. Valentine, Denver, Colo.

Most of you who attend these conventions are conversant with the methods and conditions prevailing among carnation growers in general, but Chicago has probably been your western horizon, beyond which there has been little to induce investigation. The success or failure of any industry must be the result of the conditions met with, together with the efforts made to counteract or profit by them, as the case may be; and climate, together with soil and water, are the chief natural conditions to be considered by the florist. Other factors that make for success or failure are the transportation facilities (the distance that can be covered before flowers suffer severely in transit); the population within these transit limits; the ability and the disposition of this population to buy flowers, and the competition from within and without.

It is true that an overwhelmingly large proportion of the carnation business of the country is carried on in those states within a thousand miles of the Atlantic coast, yet beyond Chicago lies a territory of equal extent, which must be crossed and left behind before one reaches the eastern limits of the Rocky Mountain region. It is quite the common thing to admit that a grower will be handicapped by differences in soil and climate if he moves from England to Massachusetts, or from the Atlantic to Ohio or Indiana; yet the difference in conditions between any of these points is not so great as between either of these localities and the Rocky Mountain region. Except in a few limited areas the whole of this country east of Kansas and Nebraska is less than a thousand feet above sea level, and in the small elevated sections the differences in soil, humidity or precipitation are not extreme; but when we come to the Rocky Mountains we find a territory over 1500 miles long from north to south, and averaging 500 miles in width, with very few points less than 4000 feet above the sea. The air is dry, the rainfall meagre, and the sunlight brilliant. In short, the whole region is arid, and ordinary farm crops cannot be produced without artificial irrigation. It is almost impossible to convey by words an adequate idea of the drying effect of the air of this region. One must actually have seen and experienced the thing to be able to appreciate it. When I say that the annual rainfall of this region averages about ten or twelve inches, and that the rainfall here in Massachusetts or in Indiana is four times that, you will not get an adequate conception of the difference. After a rain here your

humid air prevents rapid evaporation, while with us nature at once proceeds to rob the soil of that which she has just bestowed, so that an inch of rain is not so effective as here. Dews and fogs are rare, almost unknown, except on mountain peaks, which are storm centres, as they are everywhere. To me one of the most striking evidences of the drying effect of the air is the fact that a man exercising in the hot sun of summer will seldom feel his underclothing cling to his body, the evaporation being rapid enough to nearly offset his perspiration. The temperature records of the weather bureau would make it appear that Denver and Indianapolis have about the same mean temperature both for July and for January, and that the highest and the lowest recorded temperature is nearly alike for both places; but owing to the dry air Denver has a great advantage in what is known as the "sensible temperature" both in hot weather and in winter. What I have said regarding the climate applies equally well to the whole of the arid region of which the Rocky Mountain country is but a part.

The natural growth of vegetation throughout this whole region is very scanty except upon the high mountains, and even there one will not find anything approaching the riotous growth to be encountered on such mountains as the coast ranges of Oregon and Washington. There are pines, to be sure, and spruce, especially on the northern slopes, but the general appearance justifies the name given to the range. The plains or high plateaus are covered with a very scanty growth of grass in little bunches, widely separated, and for ten months in the year these are brown and have a dead appearance. Owing to the fact that there is little moisture, the dead grasses do not rot and add to the soil from which they grew, but they wither and disiccate and seem to vanish into nothingness.

I have gone into this matter at some length because I believe that soils are closely related to climate; in fact, largely the result of climate, and I have prepared you to understand that in many ways our soils must differ from the soils of the east and of the lake region. Frosts and wind are steadily carrying on the work that they have been doing for ages, but the work of all these is mainly mechanical, and the result must be largely mineral. The vegetable elements, the fibre and the humus are sadly lacking. In a great many localities mineral salts are present in such quantity as to render the soil unfit for greenhouse use, and in some cases it is barren even in the field. We are apt to say that such soils contain "alkali," without any thought or knowledge as to the exact nature of the harmful element. My observation has been that the rose is more resentful of the presence of these salts than the carnation. I am not personally sure of its truth, but it is commonly reported that for lack of suitable soil and water, roses cannot be successfully grown under glass in the vicinity of Salt Lake City.

As the character of the soil is largely determined by the climate, so, too, is the character of the water largely determined by the soil of the region through which it runs. In nearly all the arid region except in the strictly

mountainous portions, the water is alkaline. In some sections it is so bad that neither man nor beast can use it to drink, and vegetation suffers from contact with it; while in other cases only the test of the chemist shows the presence of any deleterious substance.

Where the soil is decomposed shale, it is generally heavy and known as "adobe," a clay heavy enough from which to make sun-dried bricks. This soil, when dried by the sun after a rain, will open great cracks an inch or more in width and a great many feet in length. It is needless to say that it would not produce good results in a carnation bench, but it does yield good crops for the farmer who understands how to cultivate and irrigate it. This heavy adobe is at one extreme, and we find all grades of soil differing in texture up to sand and gravel.

In some parts of the mountains we have enormous deposits of red sandstone, and the soil adjacent will be a bright red sandy loam, which yields excellent crops in the field, but lacks the necessary substance for use in the bench.

Within a small area, soils of very different character can often be found, and not infrequently the topography will indicate different rock formations as the source from which they came, but almost without exception there will be the same lack of vegetable matter. This lack is one which can measurably be supplied so far as the chemistry of the soil is concerned, but the texture of the soil cannot be as satisfactorily corrected. During the winter the carnations require a thorough watering once or twice a week, and I think all growers in our section will agree with me in saying that we have been unable to find a soil that will endure this heavy watering throughout a season in the bench without becoming packed and soggy, unless it is a soil so sandy that it will not produce a good crop.

It is to be hoped that we may learn something to our advantage from the scientific soil investigations now being conducted by the Department of Agriculture and the various experimental stations. Certainly all of us have much to learn, and our progress is so slow as to be disheartening.

When we come to consider the matter of propagation, I am inclined to think that the florist in the arid region has several advantages over his eastern brother, but the advantages are not all on one side. When the cuttings are taken, the parent plants have been growing in bright sunlight and the foliage is crisp and erect. The plants have not had to struggle through weeks of cloudy weather with the snow on the roof perhaps, for days at a time. I think I have never seen our houses darkened by snow more than two days in succession, and probably not more than half a dozen times in ten years. But when the cuttings are taken from the plant, the dry air immediately begins to attack them, and they must be put into sand promptly or they are ruined. After they are in the sand they must be watered, generally once a day, and often twice. A low house is the most satisfactory for propagating, because artificial humidity can be created. Cloth curtains under the glass and in front of the bench help to prevent wilting. I do not think propagating could be successfully carried on

Two F. R. Pierson Company Introductions

WINSOR.
Winner of Lawson Silver Medal.

HELEN M. GOULD.
Striped Sport from Enchantress.

in high, airy houses, such as one sees in use in the vicinity of Chicago and elsewhere. Clean, sweet air must be provided, yet the least draught means death to the cuttings before they have roots to replace evaporation. Often in winter the temperature of the air in the house will run too high, and ventilation must be given. In mild winters like the present one, the bright sun on the glass raises the temperature too high, and when air is given, the dry wind outside rushes in and does its fatal work.

Early in October last, we had a light fall of snow, which quickly disappeared, and not until January 7th did any more moisture fall. The benches have been shielded from draughts by curtains, and every precaution taken, yet the story is the same on every place, "Our carnations are not rooting well." Had the winter been a severe one, with cold weather and frequent light falls of snow, the results would have been very different.

Considerable trouble is at times experienced with stem rot and cutting bed fungus, but I think not to the same extent as in localities further east.

Some of you will probably think me mentally unbalanced when I say that while sunshine and dry air are fatal to fungi, they do not tend to promote luxuriant growth in anything unless it may be a cactus or some other plant whose natural habitat is the arid region. Yet stop and consider as to

what countries produce what we are accustomed to speak of as a luxuriant growth of vegetation, and your mind will revert to a climate with frequent rainfalls and a humid atmosphere. I hope I may be pardoned for again referring to roses in a meeting of carnationists, but they seem to forcibly illustrate some of the points I wish to emphasize. I have never seen more than three or four really bad cases of black spot on Beauties in Colorado, and they were probably due to carelessness, for it is a trouble that we have not learned to dread as you do here. So much must be placed to the credit of these drying influences, but they tend to ripen each shoot too quickly and induce too quick setting of the bud, with wood close jointed and wiry. I think I am safe in saying that every progressive florist in the arid region grows his tea roses grafted on manetti, because this tends to make a more rapid growth, a longer and a heavier stem.

During the period when the young carnations are in pots they make but a slow growth, and this compels us to start early in propagating, as the young stock must have a longer time in which to make plants of suitable size for field planting. Our late frosts compel us to wait until about May 10 before planting in the field. Some plant out by May 1, taking chances on a heavy frost in order to gain time, and I must admit that some of the young plants endure a pretty severe

frost without permanent injury. The tips of the leaves suffer, but no permanent damage is done; in fact, if the frost is only a very light one, it seems a positive benefit, checking the soft growth and inducing the plants to break more freely. Before planting is begun the field must have a thorough soaking, either from surface ditches or with the hose, and after planting we generally water with a lawn sprinkler every night while the plants are in the field. With plenty of water and a reasonably good soil the plants make a healthy growth in the field, though they do not attain great size. The days are hot and sunny, but if well watered, the plants do not flag, and at night the air is cool and refreshing. It is not uncommon for the mercury to drop to 50 degrees or even to 45 degrees at night, following a day temperature of 90 degrees in the shade, and the carnations seem to enjoy this.

Should the plants escape the hail storms which sometimes nearly ruin them, they ought to be of satisfactory size by the first or middle of August. Lifting from the field and replanting in the houses is the operation requiring the most care of anything during the life of the plant, and plants of moderate size endure the transplanting better than very large ones. Those that were grown in pots prior to field planting endure the removal from the field to the bench much better than those that were grown in flats.

The custom of preparing the soil for

the benches a long time in advance does not prevail very generally, and beyond insuring a thorough mixing by frequent turning, there is not much to be gained by it. Where soil piles are wet through by frequent rains, there is a constant change going on and the component parts are blended by the rotting or fermentation; but where the pile is dry, the mass is inert. We are compelled to use manure with caution, because age does not seem to render it harmless to the same extent that it does in sections visited by frequent rains.

Before beginning our planting we shade the house heavily with mud, close all ventilation and wet down the walks and under the benches. When all is ready the plants are brought from the field with all the soil that will cling to them and transferred to the bench as quickly as possible. The house is kept absolutely without ventilation for the first two or three days, and the plants are frequently syringed. The walks and the ground under the benches are kept drenched and everything possible done to prevent wilting. As soon as it seems safe, a little ventilation is given, generally starting at night, and the shade gradually removed. Within ten days the house is having full light and ventilation. As the plants grow and produce blooms, it becomes apparent that the stems are not as long or as heavy as produced by the same varieties in eastern sections. The flowers are apt to come more nearly up to the standard than the stems. This tendency of the stem is so pronounced that, individually, I now make it a rule not to buy any novelty, no matter how attractive, unless it has a decidedly strong stem. The bright sun seems to produce high color in the flower, though some of the pinks fade badly unless shaded.

Among Colorado growers there seems to be a disposition to try the promising new sorts, as they are ambitious to have the best. Those whose business it is to disseminate new varieties will, I hope, pardon me for calling their attention to a few facts. Our section is so remote that not many of us can spare the time or the money to inspect new varieties before dissemination, and we must depend largely upon what you say in your advertisements. A great many letters of a semi-confidential nature are written by you to induce sales—letters intended to put you in close personal relations with the grower. The confidence thus engendered in the western goose and the crop of golden eggs is one whose loss you would deplore. You may have the fullest faith in a resurrection after death, but if you once kill this valuable goose it will stay dead a long time. Study carefully then the special needs of this section, and be sure you have a good reason before you urge a purchase. When you have made a sale, bear in mind that the journey is a long one, and that when first potted, a rooted cutting in the Rockies has a hard struggle for existence. It is useless to ship cuttings to that section unless they are well rooted, and extra care should be taken to see that they do not dry out in transit. Show a disposition to advance our interests as well as your own, and you will find that we are an appreciative lot.

I think that but two carnations have come to us in recent years that have

demonstrated their ability to produce good flowers with strong stems in satisfactory quantities as grown by the average florist. These two are Mrs. Thomas W. Lawson and Enchantress, and the florists of the Rocky Mountain region all take off their hats to Peter Fisher. White Lawson is just as satisfactory as the original pink, but the short stem early in the season is an objection to both. Harlowarden has been quite satisfactory, but the demand for that color is small. Fiancee has proved a wonderfully fine grower and blooms freely, but she has been on one protracted "bust" since October, and unless she mends her ways we will refuse to give her lodging next year.

The region we are considering includes an area about as large as ninety states the size of Massachusetts, yet the latter has nearly twice as many people and six times as much glass within her borders as are contained in all this vast region. Denver is now but forty-two years old, and is about one-third the size of Boston; Salt Lake is about the size of Springfield; Butte and Pueblo about as large as Holyoke; Colorado Springs and Ogden will compare with Fitchburg, while Cheyenne, Wyoming, Helena and Great Falls in Montana, Leadville and Cripple Creek in Colorado, are in size between such cities as Pittsfield and Newburyport in this State. By the census of 1900, there were only twenty-two cities and towns in the Rocky Mountains with a population of 5000 or over, while Massachusetts had nearly eighty in the list.

The last census showed that Colorado had more than two-thirds of the glass in the mountain region, and since then two or three important places have been erected. Important additions have also been made at Salt Lake and at Butte. Small establishments with from one to five thousand feet of glass have been started at many points in the mountains, and I look for a still further increase in places of that kind. A town of two or three thousand inhabitants, with small mining camps tributary to it and within easy access by rail, may very well offer inducements to the young man looking for an opportunity to start in a small way.

At present in our own establishment in Denver, we have ledger accounts with more than a thousand people scattered all over the mountain country. There is hardly a day in the year that we do not send retail orders to places from three to five hundred miles distant; and on holidays, especially before Memorial Day, these express packages go out literally by the wagon load. Oftentimes these orders come in by telephone from some mining camp hundreds of miles away on the opposite side of the mountains. We must be in a position to know as far as possible the financial standing of the people scattered over this wide area, and keep the information so readily accessible that we can look up a man's credit while he holds the long distance telephone at so much per minute. This is made possible by index cards, which show at a glance what experience, if any, we have had, and also the reports as to credit received from other sources.

This long distance business will eventually be reduced by the establish-

ment of small places, such as I have just referred to. But a wise man changes his methods with changing conditions, and we hope to then sell enough in other ways to offset this loss. At any rate, we will always welcome any man who comes among us and demonstrates his ability to succeed by honorable methods.

There is no wholesale commission house within the region we are discussing. Two or three earnest attempts have been made in that direction, but they have all failed.

Some flowers are shipped into our territory from outside. Kansas City sends a very limited amount to New Mexico, while Minneapolis and St. Paul ship rather largely to Montana. Ten years ago Chicago found a good market in Denver, but that time is past. Our real competition comes from Council Bluffs, half way between Denver and Chicago. Without any direct information, I am inclined to think the long distance trade of that point is gradually being secured by Colorado florists, who have the advantage of the shorter haul; and that Council Bluffs is finding not only compensation, but increased demand in markets nearer home, just as I have predicted must happen to us in Colorado, in our turn. We trust we may be able to meet the changing situation with like success.

I think a wrong impression prevails concerning the prices we obtain. In Denver they will average fairly well with prices in eastern cities. We are never compelled to accept the very low prices that sometimes obtain at eastern points, but at holiday seasons our highest prices are decidedly lower than your highest prices.

Fairy tales are told of miners who suddenly acquired wealth who spend their money lavishly; but in such cases they are apt to patronize those places that carry their stock in bottles instead of vases. A few drinks often create a temporary disregard of expense and a fondness for bright colors, but this is not the result of climate, and the effect is no more noticeable in Denver or Butte than it is in Boston or Chicago.

As a general thing, the man who has acquired wealth by his own labor does not spend his money freely for luxuries; neither is he apt to consider flowers as necessities. It is generally the second wealthy generation who consider our products necessary to their existence, and as our country is new, we must wait for time to bring this class of customers. In the meantime, we make up for their lack by the absence of the extremely poor. Abject poverty and destitution are rare in the mountain regions.

The February issue of Suburban Life is a beautiful product of the printer's art. The Mt. Pleasant Press of Harrisburg, Pa., are noted all over the country for their perfection in magazine making, and, therefore, when Suburban Life last month announced that these printers had been secured beginning with the next issue, the February number was looked for with great interest. It can in no way fail to delight its readers. The beautiful hand-set type and the abundance of half tones, admirably executed, go to make up a perfect periodical. With this issue, the magazine has been considerably enlarged and is more general in its tone. It contains a wealth of practical and entertaining features.

CARNATIONS FROM A WHOLE-SALER'S POINT OF VIEW.

(Read before the American Carnation Society.)

By A. J. Guttman.

It is said that "some are born great, others achieve greatness, and still others have greatness thrust upon them." It seems to me that I am among the last mentioned; but I assure you that I fully appreciate the honor accorded me, in being given the privilege of presenting a paper before such a representative body of our craft. I am glad of this opportunity, however, as the growers' interests and the wholesalers' interests are so closely linked that it is imperative that we come together occasionally and exchange views on trade interests if we would have the best results from our labors.

The carnation has become of great importance to the flower trade; and there is no doubt in my mind that this condition has been brought about mainly through the work of the American Carnation Society. Although there is keen competition among carnation growers, the fact that they so well understand the principles of business, and pull together on all matters that may be, or are, of benefit to the greatest number—this has made the society what it is. The impetus given to the raising of new varieties can be justly claimed as the fruit of this society's work; and it is through the many new and improved varieties, well grown and liberally exhibited before the public throughout the country by the members, that the divine flower has attained the prominent place it holds today with the people of the United States, Canada, and Europe.

Although carnations today are a staple feature in the market, they are a somewhat difficult crop to handle as their keeping qualities are so variable. Some varieties have excellent lasting powers, and others as you are all aware are not very good keepers; the wholesaler has to familiarize himself with the peculiarities of each variety, for there are several of our commercial sorts which, although they are excellent for home trade, will not bear re-shipping to any great distance.

Another fact that I should like to draw your attention to is, that with the gradual improvement taking place in carnations, it is becoming harder all the time for the wholesaler to handle the smaller varieties to advantage. Therefore I would recommend that growers use their very best judgment in selecting only the best varieties such as are generally termed fancies, as these find quick buyers. Would also recommend that the wholesalers should be asked to give their candid opinion of the selling and keeping qualities of any new varieties that are being introduced throughout the country, and I think it would to a great extent, prevent growers from buying undesirable varieties.

Another suggestion: See that your flowers reach the wholesaler in as perfect condition as possible. You have spent your time and energy in growing them, yet all these efforts are for naught if the packing and shipping are not attended to with the proper care. The wholesaler wants good stock fresh and carefully handled; the name of the carnation is not in itself

a salable asset. The stiff-stemmed varieties should be tied as low as possible in bunching, so as to let the flowers spread nicely, and they will then show up well. The fewer flowers in the bunch the better they will carry for shipment to the wholesaler, and twenty-five should be the most put in a bunch.

Should your facilities for shipping be such that for instance, you can deliver stock to the wholesaler by wagon; or, when they are choice varieties, then, I would advise to pack the carnations in boxes, in layers; of course these should not be bunched. Growers should systematize their picking, bunching, packing, and shipping, as much as possible, for it all helps to give satisfaction to the wholesaler, retailer, and general flower-buying public.

It is a fact that there are not so many early and small grades of chrysanthemums grown through the country as heretofore. For that reason I should think that varieties of carnations that could be brought in crop,

CHARLES WEBER, of Guttman & Weber.
Introducers of Carnation Victory.

in good shape during the fall, should prove profitable to the grower, as good prices can be obtained for them. Fancy scarlets that can be brought in heavy crop for December are profitable to grow.

Another question which seems to me very important is how best to keep carnations after they are cut; and in my opinion this is an important problem for the American Carnation Society to solve. The wholesaler at most times through the season, has to display the stock for at least three hours, although at certain times of the year the blooms are really sold before they come in. In the latter case they are promptly repacked and transferred to the retailer; but when it is necessary to display stock which has perhaps been grown a little soft, and possibly not picked at the proper time, as is often the case with growers who do not pick daily, in that case I tell you, the wholesaler is up against it, as we should say, when making his returns to the growers.

I think we ought to have a better system of grading. We would not require so many distinctive grades as is

given to roses, but to keep the poorer flowers separate would certainly be a good idea, for it often happens that a retailer when buying carnations, will reject an entire bunch because of one or two poor flowers, and he will tell you that the flower buyer detects a poor flower as quickly as he. When the retailer can depend upon a certain grower's stock, and know that it is carefully bunched, and carefully sorted, it is an advantage to him, for it saves time, and invariably he will be glad to pay a little more for this grower's stock. I know some growers who have for several years graded number 1's and number 2's, much to the advantage of grower, wholesaler and retailer, and it would be a great thing if every grower adopted the same plan.

It is to the best interests of all that the grower have the fullest confidence in his wholesaler, and consign his flowers regularly, and not to hold them back for special occasions. I know that this is a delicate subject and I approach it only after due consideration. We can understand that in years gone by, when there were no flowering plants grown for the Christmas and Easter holidays, there was something to be gained by keeping every flower possible for the holiday sale, when flowers were scarce and prices went soaring upward, but those times are a thing of the past. There is no more scarcity such as there used to be at holiday time; the increase in glass and the growth of the plant industry has done away with that feature of the holiday business. "Ship your flowers when they are ready" is a good rule and in such holding back as is necessary try to govern your picking so that flowers will not have been cut too long. The wholesaler of today is equipped with cold storage facilities and he can hold the stock if necessary, or sell it at once if that is best, and being in the market he can take advantage of the conditions that may arise, much better than he could if the grower has the flowers in his own cellar. I have seen carnations right before a holiday, which, although they looked grand in the grower's cellar, were not salable three hours after reaching the wholesaler's establishment.

I would like to say a few words on high prices: often the growers put it up to the wholesalers, especially during the winter season, to explain why prices are high today and low tomorrow. My experience has taught me that when prices are too high for the average retailer to be able to satisfy his customers and make a reasonable profit, the retailers stop buying for one or two days, and, as the stock continues to bloom and flowers have to be moved, the wholesaler is compelled to lower prices, then the retailers buy, and the machinery is again in proper motion.

One thing more: The wholesaler can greatly help to popularize the meritorious varieties by distributing the bloom among as many retailers as it is possible for him to do with the supply at his disposal.

I wish to say here that several gentlemen of our profession have assisted me in preparing this paper. I felt that since you have so honored me, it was my duty to present here as good a paper on this subject as it was possible for me to give you.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

SEE ILLUSTRATIONS ON PAGE 135.

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

TARRYTOWN-ON-HUDSON, NEW YORK.

THE BURBANK "CREATIONS"—A CRITICISM.

We acknowledge with pleasure the receipt of the following letter, with enclosure, from a subscriber.

Being much interested in the mild warfare waged by one of your contemporaries with poor Mr. Burbank as the bone of contention, my interest was great enough for me to make a genuine and long-protracted effort at reading that idiotic, flat and unprofitable eulogy which the Macmillans have recently published about him. Yesterday, to my great delight, on opening my copy of "Nature," the English edition, I found a review of the above mentioned book, which strikes me as being about the fairest, squarest, best thing on the whole subject I have yet seen. It occurred to me that you might not see "Nature," so I had the article typewritten for you and enclose it herewith. The article seems to me very much in keeping with the fine material you are giving us in "HORTICULTURE," and you may like to use this. Good wishes to you and good luck to HORTICULTURE.

Plant-Breeding in America.

New Creations in Plant Life: An Authoritative Account of the Life and Work of Luther Burbank. By W. S. Harwood. Pp. xiv., 368; 50 illustrations. (New York: The Macmillan Company. London: Macmillan & Co., Ltd.) Price, 7s. 6d. net.

There is something to be said in favor of this work. At the same time, we imagine no one will have more cause to regret its appearance than Mr. Burbank himself. The reasons for this expression of opinion are easily supplied. It is decidedly desirable that the outside public should be made aware of the enormous practical importance

of what is called plant-breeding, and that they should be familiarized with the means and methods adopted by experts for the multiplication and improvement of flowers, fruits and other vegetable products. A slightly increased percentage of sugar in the sugar-cane or the beet, an apparently trifling improvement in the staple of cotton, the development of a potato relatively immune from fungus diseases, an increased production of fruit or the introduction of harder varieties, of some that are earlier, or others that are later, to say nothing of the improvement of flowers in form, color and perfume, are all points of great importance and of very great interest from a biological point of view.

In this field of work Mr. Burbank has long been known as an energetic laborer, and it is quite possible that in actual amount his work bulks larger than that of any of his predecessors or his contemporaries. Moreover, as we learn from the book before us, and from other sources, the experimenter is a man of high purpose, modest and amiable. It is for these personal reasons we imagine that he will have cause to regret the appearance of this volume. We have no desire to belittle Mr. Burbank or to undervalue the importance of what he has accomplished. We believe that he would be the first to acknowledge that there existed strong men previous to the appearance of Agamemnon. But this is a fact that his eulogist does not sufficiently estimate. In perusing the glowing paragraphs of this volume the casual reader might imagine that there were no plant-breeders before Burbank, or that their labors were comparatively insignificant, and yet in our own country alone we seem to have heard of Thomas Andrew Knight, of Dean Herbert, of Trevor Clarke, of Thomas Rivers, of John Laing, of Donlay, of Sedan, of Laxton, and of large numbers of others whose productions at least vie in importance with those of the American experimenter, whilst a visit to the great establishments of Vilmorin near Paris, Benary, and others at Erfurt and Quedlinburg, as well as to the trial-grounds of our Vetches, Suttons, Carters and many others, would show that the great American hybridist is by no means without a rival in his line of work.

It would hardly be fair to criticise those products of Mr. Burbank's skill and perseverance that have reached us, because it

may well be that they are not yet adapted to our climate. At any rate, to name only a few instances, the Burbank plum, the Burbank lily, the Shasta daisy, all so enthusiastically spoken of in the pages of this book and elsewhere, have not, in this country, justified the encomiums passed upon them by the American press.

When we read of Mr. Burbank's methods of work we do not find anything different from the practices of our "raisers," who are too modest to speak of their efforts as "creations."

Among the "creations" mentioned in this volume is the "thornless edible cactus." Surely we have heard of and seen a spineless *Opuntia* before attention was called to it in this volume, where it is stated that "nothing more marvellous has ever been done in plant life!"

Again, "the rare effects developed in the transformation of the columbine" do not differ (so far as we can tell from the illustration facing p. 359) from the stellate columbine known in our gardens for centuries and figured on p. 273 of Parkinson's *Paradisus* (1629).

A man who has experimented on such a colossal scale for so long a time might be expected to have gathered valuable information on such points as heredity, adaptation, inheritance of acquired characters, as well as formed opinions on Mendelism and mutation. We gather from the book before us that Mr. Burbank's attention has, almost of necessity, been directed to these subjects, and we earnestly hope that now that the Carnegie Institution has granted him a subvention of ten thousand dollars a year for ten years he will find time to record and co-ordinate his experiments for the benefit of future workers and the increase of biological knowledge.

Incidentally, we glean that Mr. Burbank is not inclined to accept the views of Weismann or of Mendel, but that he looks favorably on the mutation theory of De Vries. Surely no practitioner has had better opportunities of judging of these matters than has Mr. Burbank, and if he will give us his own experiences in his own words, rather than in those of some too partial biographer, the world will be the gainer, and the value of Mr. Burbank's work more accurately gauged than it can be from the perusal of the present volume.—Copied from "Nature" (No. 1889, Vol. 73), January 11, 1906.

THE CARNATION OF THE FUTURE.

Read before the Gardeners' and Florists' Club of Boston, by Peter Fisher.

We think of the past with its attainments or failures. We live in the present and see it recede to the past like a scene in a kaleidoscope. The future is mythical and hazy: no man knows what it has in store for us; we can only guess in a measure. Looking backward for a moment and judging from what has been and is being accomplished, we may form a pardonable estimate of what will or may be towards the development of the carnation of the future.

To make any true progress we must always have an ideal to work up to, but the ideal carnation is always just a little in advance of us. We think to grasp it and find something imperfect instead, and as we look again day-dreaming we again see our ideal ever ahead in all its beautiful and varied shades of color, perfection of form, and luxurious growth. This is well, for were perfection attainable here, progress would cease. What culture and selection have done for the improvement of the carnation in the past it will do on a larger degree in the future, and as the standard rises higher and higher, the fancy varieties will be succeeded by a class more perfect and beautiful, with higher class still beyond. Imagine, if you can, a type of carnations in beautiful and varied shades of popular colors, so far in excess of the best of today in point of size, as to rival the American Beauty rose, and sold at prices unheard-of. This is within the range of possibility; we are steadily but surely coming up to this standard.

In the near future, varieties of carnations specially adapted for the purpose will be grown in pans and meet with a ready sale and increasing demand. Dwarf, compact-growing, free-flowering varieties will be the type, in varied shades of color. Think how well-grown specimens of a scarlet, for instance, would sell at Christmas.

After another season of experience and close observation, I am more than ever convinced that the best carnations of the future will be grown indoors exclusively, much in the same manner as roses are handled today. By this method of culture you will obtain a steady supply of bloom superior in every way to field-grown plants. But the houses in which they are grown must be specially adapted. Those running north and south will have a decided advantage over those running east and west, as the stock can be grown cooler during the hot days of summer; the advantage of better light in an east and west house in winter will not affect the advantage of a north and south as a growing house during summer, and with this thorough root action the difference in number of blooms obtained will scarcely be perceptible, with a decid-

HOUSE OF "THE ARISTOCRAT"

Photographed Dec. 20, 1905.

ed advantage in quality in favor of the north and south house during hot spring days. Benches will be best for this method and those with tile bottoms preferable, as they will be beneficial in retaining moisture and keeping the roots cool. Not less than five inches of soil should be used, as shallow benches require too much watering during hot days, which tends to sour the soil. A large, wide, span-roofed structure with continuous ventilation on each side of the ridge and at the sides will be the type of greenhouse best suited for this purpose. The dissemination of the carnation of the future will be along different lines from that of the past or present; a strict record of its merits and faults will be kept in tabulated form, at least two years prior to distribution, stating how many blooms it will produce per square foot of bench space, how many plants to the square foot, date when cutting of blooms commenced, when plants were thrown out, and number of saleable or split blooms picked from a given bench space each day. These records will be kept for inspection at any time. A synopsis of this report will be added along with the advertisement of the cuttings, and placed on the exhibition tables when new varieties are shown, and the confidence of the trade will be restored. Then as our successors in business look up the records of our past and present methods, they will draw the cloak of charity over the past, but the blush of shame will tint the cheeks of some, as they reflect on the shady methods—it may be of a parent who has passed beyond.

How is all this to be accomplished? First by improved culture of our best existing varieties, then it is simply culture and selection all the way along.

HORTICULTURE Publishing Company:

IMPRESSIONS OF CALIFORNIA AND ITS CLIMATE.

(A Paper Presented by E. D. Darlington, Before the Florists' Club of Philadelphia.)

In complying with the request of certain members of your club that I should give you a short talk on a trip which I had occasion to make to California the past fall in the interests of the seed firm with which I have the honor of being connected, I would state that the period of this visit was the latter part of September and the early part of October at which time nearly all the harvests had been gathered and the growers were awaiting the advent of the rains to commence plowing and planting the crops for the ensuing year.

In the section visited which comprised the coast-line from San Francisco to Los Angeles and the higher land in the vicinity of Sacramento, there had been no rain since the previous spring; the hills and mountains were gray and bare excepting for the small brush and occasional carpet of dried burr clover, while over the trees and road-side weeds were a thick coating of finely powdered dust. Excepting on occasional small lawns and parks which were kept frequently watered, nature had completed her work for the season and was enjoying a period of rest before starting in to produce another crop. But the climate was fully in evidence everywhere and its possibilities were a source of continual wonder to the gardener from the east and impressed itself on one at every hand, not only to see the growth of palms and greenhouse plants in the open air, but also in the changed appearance of our own familiar crops of fruits. The real estate boomers and people of the towns hold forth on the subjects of climate with the greatest enthusiasm but the gardeners and seedmen whom I had the pleasure of meeting, pass over all this as a matter of course and confined themselves to showing their various crops and the natural points of interest in their immediate vicinity and all were true gardeners in extending the hand of fellowship and hospitality. My time was extremely limited and was so fully occupied in visiting the ranches of the seed growers that I did not visit any distinctively florists' places, nor did I notice any such on the outskirts of the cities, but they must have a number of such places as the flower stores in the cities evidenced. These stores were quite in the eastern style, though not nearly as numerous. At the time of my visit the flower stores in Los Angeles and San Francisco had good displays of chrysanthemums, which at that time were selling for \$2.50 per dozen at wholesale in San Francisco, but aside from the chrysanthemums, the flowers displayed were not as fine as the products of the greenhouses in our own

city. No doubt this is largely due to the lack of demand for fine flowers at that time as it was between seasons, as there should be no difficulty in producing as fine roses and finer carnations than we have if there should be a sufficient demand for them. The only drawback is the high cost of coal, but this could probably be obviated by the use of oil, which is almost exclusively burned for the production of power.

Leaving San Francisco the morning after my arrival, my first stop was in the famed Santa Clara valley, a tract of level land from three to ten miles wide lying between two ranges of brown hills. The soil is black and heavy, much of it in the central portion being adobe or dried swamp land divided by large open drainage ditches, while the higher portions were of a lighter color and texture. The soil is free from stones and consists of loam or earth which has washed down from the hills through countless ages, and the higher, lighter colored ground had much the appearance of our own soils, but in the lower ground the black adobe has the appearance of the muck found in the bottom of an old pond. In the dry seasons this black earth becomes extremely hard and large cracks radiate over the surface in every direction. Even where it is kept constantly cultivated, the small particles of soil resemble gravel in their hardness.

Such flowers as late crops of sweet peas, asters, etc., as well as beds of young celery, carrots and endives were growing vigorously under the influence of irrigation and did not seem to mind either the hardness of the soil nor the intense heat which prevailed during the middle of the day. Hoeing to keep the surface soil still loose and fine is unknown in California, and probably impossible in the adobe lands. It was a strange sight for eastern eyes to see men walking between the rows of plants with the hoe held high in the air to furrow a vigorous chop at any weeds which might appear.

The fruit orchards on the other hand have the surface of the soil constantly cultivated and are as clean and free from weeds as a model garden, but the eastern eye misses and longs for the fresh green backgrounds which should relieve the cultivated lands, and its entire absence at least at that season of the year, continually reminds you that you are in a strange land. The leaves of the fruit trees are a rich deep green, as well as the foliage of the growing crops, but serve only to accentuate the dusty brown or gray tints of the surrounding landscape. Even where there is a bright green lawn, it has the appearance of a small flower bed in the midst of the bare brown earth surrounding it on every side.

Nearly all planting in California is done on a large scale and is quite distinctly localized; thus in the Santa Clara valley, we find the ranches of the principal seed growers within a few miles of each other, and fairly extensive apple orchards, with miles and miles of prunes and thousands of acres of sugar beets. Every crop is grown for the cash it will bring and outside of the large tourist hotels and some few private places in the towns, ornamental plantings or surroundings are things of the future. This seems strange to a gardener or florist as practically all of our decorative palms and plants can be grown in the open air but it is doubtless due to the necessity of irrigating or constant watering of the plants and grass required during the dry seasons and it costs about twenty to twenty-five dollars for the water necessary to keep a small town lawn fresh and green during the summer and fall.

Although very nearly all of the level valley lands are now under cultivation, there still remain occasional groups or clumps of live oak trees and these with their mossy gnarled trunks and branches and the bright green holly-like leaves are the most attractive features of the valleys, but as the grazing ranches are divided and broken to the plow they are being cut out and made into firewood and there seems to be no attempt whatever to make new plantings of this beautiful and locally characteristic tree. I shall always remember the live oaks not only for their interesting growth, but also for the grateful shade they furnished during the heat of the day, as the moment you step under the branches of the live oak you feel a coolness similar to that when going into the florists' ice box while with all other trees the foliage simply affords relief from the strong sunlight without any feeling of coolness in the air. During my stay in the Santa Clara valley the thermometer would go to 108 to 110 degrees during the middle of the day; the air was clear and perfectly dry, so that no one perspires but the heat is felt in a burning or prickling sensation on any exposed portion of one's body. Nearly all the time there was a fresh breeze blowing in between the hills from the Pacific and from four in the afternoon until ten in the morning, the air was cool and pleasant, and at night sleep was most refreshing unless the California flea was present to take a hand in welcoming you to the country.

It is the climate combined with the fertility of the soil which makes California so desirable for seed growing, as during the harvest season there is an entire absence of rain. Seed heads develop and ripen and the harvest proceeds steadily, yet without rush or hurry, vines or seed heads are cut, field by field, and spread on large

Killarney Plants -FOR- Richmond Plants

WE will propagate *on orders* any number of above varieties for ensuing season. Have the largest stock of Killarney in America. The price will be \$15 per 100, \$120 per 1000, from 2 1-4 inch pots, and guarantee fine plants, but must have the orders early, as we are not in the plant trade, to ensure permanency of order we want a deposit of 20 per cent. of value with order, same will be credited on bill at delivery of plants. Correspondence solicited.

QUEEN BEATRICE

sheets to dry and when all have been harvested, the thresher goes from block to block, followed by the cleaners and the sacks of seeds are stacked in the open air until they are hauled to the warehouse in the fall. There is no anxious watching for forcing showers or heavy downpour as with us and no need for any shelters in which to dry and thresh the seed.

Next to the seed ranches the most interesting feature of the Santa Clara valley is the miles and miles of prune orchards, and in handling this crop the prunes are allowed to ripen fully and drop to the cultivated soil beneath; they are then gathered from the ground, dipped in lye to remove the bloom and are spread out on slated crates such as we use for onion sets to dry. The past year the prune crop, like nearly all other crops, was cut short by the intensely hot weather in July, but the price was good and growers were having better returns than from the very large crop of the preceding seasons.

Below Santa Clara I visited the "slews" of Watsonville where the soil is a black fibrous peat, similar to that of the Jersey swamps and here were crops of cauliflower in all stages from the freshly set young plants to those in head and seeding. In these valleys there were clear streams of water running in the drains and it seemed entirely practicable to grow all moisture-loving crops at any season of the year, but it is not suited for general seed raising on account of the heavy fogs which come in from the sea. The hills surrounding these valleys are devoted to dairy farming and apple orchards and the country had more of a home-like appearance than any part of California I visited.

Going still further South, I stopped at Lompoc where the chief crops are mustard seed and commercial or soup beans, and still further south to Ventura was a lima bean country. Try to imagine from fifty to seventy-five miles of travel through narrow but level coast lands where the principal crop was lima beans, interspersed with orchards of English or more properly

called Persian walnuts. This portion of California was to me the most interesting for here were the evidences of the early Spanish settlers, fan palms sixty feet or more high, araucarias forty to fifty feet high and a grape vine with a trunk over a foot in diameter and the branches covering a trellis which extended over half an acre of ground. This vine is at Carpenteria and coming on it unexpectedly, I at once recognized it from the illustration in our gardening publications. The vine is in perfect health and vigor and could easily be made to cover a much larger area. On the under side of the trellis hang immense clusters of fruit, a single cluster of bunches being large enough to fill a good sized wash-tub, but owing to a lack of water the grapes were poorly developed and only fitted for the wine press. Here we also visited a small ranch in a little valley where three generations of a Scotch family had a small fruit ranch which was a feast to delight a gardener. Here in adjoining rows and blocks were strawberries,

raspberries, blackberries, loganberries, purple guavas, figs, an extensive assortment of our finer hot-house grapes, lemons, oranges and grapes, some in full bearing and others with occasional clusters of ripe fruits according to their season. Here were trained gardeners of the old school raising in the open ground all the fruits which they had been accustomed to grow under glass in their old homes. An incident of Carpenteria was a large Magnolia grandiflora with camellia-like blossoms a foot in diameter and on my commenting on its flowering at that season of the year, I was told that it was "a continuous performance" and that it flowered throughout the whole year. From the windows of my room in the Hotel Rose, Ventura, I could look down into the flower garden of Mrs. Theodosia B. Sheppherd which occupies an entire square in the center of the town, and here was a most interesting and varied collection of flowering plants, many of them old acquaintances of my appren-

IMPRESSIONS OF CALIFORNIA AND ITS CLIMATE.

(Continued from Page 141.)

ticeship days which have now disappeared from our commercial green-houses, as these in recent years have been turned into cut-flower factories or palm nurseries to the detriment of varied plant collection. In one corner there were small glass houses heavily white-washed for propagating purposes while along the central walk were lath shades filled with begonias and creepers, and at intervals were ornamental summer houses or pagodas artistically decorated with the leaf stalks of the fan palm. Quite a large section of the grounds was laid out in rock work and devoted to cacti and other succulents and the whole was a most interesting treat for any flower-loving gardener. A noticeable feature here as elsewhere in California, was the immense size of the individual florets on the geranium, all varieties appearing to have much larger and more brightly colored flowers than with us. Near the hotel there is a rubber tree which has the size and developments of a twenty-five year old Norway maple, and at the Mission there is an araucaria fully fifty feet in height, but a peculiar feature of the araucaria was that instead of being flatly spread, the side branches turned upwards in a V-like form, possibly owing to the dry season.

Fine palms fifty to sixty feet in height are ornamental and a distinct novelty, with their smooth trunk and crown of green leaves high in the air, but the dead leaves hanging closely to the trunk below the green crown detract from its beauty and I can not commend it for street planting, especially when of younger growth, the spikey parts of the leaves are on a level with your eyes. The fan palm and the pepper tree seem to divide the honors in California and both are used very largely and almost to exclusion of other trees for street planting. The foliage of the pepper tree is beautiful and glossy, but the trailing branches hang down like those of a weeping-willow and are only a little less annoying than the spikey palm leaves, while the immense crop of berries keep the walk dirty and slippery. Some day when these trees grow larger and taller they will add a distinct feature to the towns but it seems a pity that when there are so many more graceful and suitable trees for street planting that these two should be used exclusively, as they are much better adapted for individual specimens on the lawn. Near Ventura is the Cole bulb farm where callas and freezias are grown by the acre, but these were just starting into growth after their summer rest and of course, did not present the display that they would in the spring

CUT FLOWERS

PHILADELPHIA CUT FLOWER CO.

Wholesalers of Cut Flowers

1516 AND 1518 SANSON ST.

VICTORY

The most brilliant scarlet carnation. Requires only ordinary culture. Is a fancy in the fullest sense of the word and wholesaled at \$25.00 per 100 at Christmas.

Cut Flower Market Reports.

The present week sees but **BOSTON** trifling changes in cut flower conditions in this market. Carnations and lily of the valley are lower; yellow narcissi are also tending downward in value, while advancing in quality. These are all due to increasing production, and not to any slackening of demand. Roses are going the other way, being supplied in lessening quantities, and in quality none too good. Cut flowers, wall flowers, sweet peas and other pretty little specialties are finding ready sale.

No complaint can be made on the amount of business done the previous week. The spring weather has forced on carnations, roses and bulbous stock to good extent. The only things that actually were scarce were good Beauties, the price holding firm but no special demand. All other stock was enough to be had. Some lines were moved slowly but up to Saturday a good cleaning up was had, much floral work in evidence. Green goods were abundant; sales a little weak.

Business during the **CINCINNATI** past week was what might be termed fair; the best flowers sold out clean every day, while the inferior grades went begging. Prices have taken a drop for the simple reason that the grade of stock is not up to the standard. Nearly everything has the appearance of having been picked over before it reached the market. Daffodils made their appearance last week and can now be had in any quantity. Harrisii lilies are more plentiful, but a large number of the flowers are imperfect and therefore unsalable. Tulips can now be had with longer stems and in great variety. Carnations and roses are weak in the stems, and many of the former are so badly bursted that they are not salable. There is not much doing in the plant line. Azaleas and primulus are largely used for window display but comparatively few are sold.

With a week of **INDIANAPOLIS** spring-like weather trade has been fully up to expectations. No special rush but good active demand. Stock in nearly all lines is about equal to the needs of the day. Beauties are more plentiful and of excellent quality. Bridesmaids are improving in color. Carnation crops are satisfactory in quantity as well as quality. All report heavy sales in blooming plants, probably due to bright weather. Lilac, sweet peas, daffodils, tulips and mig-

nonette are in better supply and find ready demand.

LOUISVILLE Business conditions last week were up to expectations. The weather was good, and stock came in in satisfactory quantities. Carnations had a good steady demand, with a good supply. The quality could be better. The demand and supply of roses were up to expectations, with the quality moderate. Lilies of the valley and violets found an unusually good demand, with the supply a little slow. Narcissus, hyacinths and other bulbous stock moves satisfactorily.

NEW YORK Though business is fair, it lacks snap. In consequence of a shortened rose supply, American Beauties lead in demand, and the larger sizes are maintained at top figures. Bridesmaids are none too plentiful. The Bride is wanted chiefly in the lower grades, so that the best do not average up with Bridesmaid. Liberty and Richmond are readily sold, and so, too, are the choice grades of Golden Gate, Killarney, Chatenay, etc. Carnations are plentiful, the novelties bringing good prices. Of the standard varieties, all colors are well represented in the market. Harrisii lilies are moving easily at good figures. Bulbous stock continues to increase in quantity, and yellow seems to be a feature in every wholesale window. There is a pause in the call for lily of the valley, judging by the lower quotations that have obtained for several days past. The bulk of violet shipments reach the street merchants, who have been favored by the fine weather. The sale of smilax drags, while Asparagus plumosa sells readily.

PHILADELPHIA. The warm weather in the early part of the week hurt the sale of carnations, as they had a strong sleepy tendency, but later the brisk weather helped things wonderfully; and on the whole, business was pretty good all along the line. Beauties were a little scarce, but of very good quality. A marked feature of the market was the improvement in the quality of Bridesmaids. Killarneys and Chatenays came in more freely and were quickly taken up. Enchantress remained the leader in carnations; white Lawson was also a favorite. In reds, Flamingo is undoubtedly the finest; but as it requires very careful handling so as not to bruise it, many prefer Crane or Bliss, although these latter are smaller. Cattleyas are in good form at present. Cypripediums nearly over. Lilacs remain a strong feature of the market, and are in good demand. Lily of the valley and sweet peas normal; single tulips and daffo-

dils are the best sellers in the bulbous line. Freesias are at their best at present, and large quantities are being used. A flush crop of snapdragon is on, and meets with some favor. McKinley day helped the carnation market a little. There was no advance in prices, but the previous good figures held firm. This was especially true of pinks and reds.

SAN FRANCISCO

The executive committee of the McKinley Club, which numbers between four and five thousand members, has been sending out notices broadcast to not forget the McKinley carnation on January 29, and the carnation trade is feeling the incentive. First quality American Beauty roses are scarce, but fine tea roses are on hand in excess of the demand. Such bulbous stock as tulips, Roman hyacinths and paper white narcissi is arriving in improved quality, and violets and lily of the valley are in great abundance and breaking records on quality. Business is always slow at this date, but the cut flower trade may be said to be getting along rather better this year than usual.

FIRE RECORD.

Allen & Yeaw's greenhouses and barn in Worcester lane, Waltham, Mass., were destroyed by fire on January 26th. A defective boiler was the cause. The loss is reported at \$4000.

Nearly all of West Collingswood on the outskirts of Camden, N. J., assisted in extinguishing a fire at the greenhouses of Herman Zimmer, which destroyed thousands of plants. About \$1000 damage was done.

NEWS NOTES.

One of the Louisville daily papers last week contained a large advertisement in colors by Jacob Schulz, representing a wreath of red carnations encircling a portrait of McKinley and announcing a complete stock of McKinley's favorite flower. This is the kind of enterprise that pays.

Bulletin No. 1, "The Gypsy and Brown-Tail Moths," has been issued from the office of the superintendent for suppressing the gypsy and brown-tail moths in Massachusetts. It gives the life history of the moths, tells where to look for them, the remedies against them, contrasts the species, and closes with a summary of the law of Massachusetts requiring their suppression. The pamphlet is fully illustrated. HORTICULTURE has secured a supply of these books, and will be glad to furnish copies to any applicants.

CATALOGUES RECEIVED.

Michigan Seed Co., Bay City, Mich.
—Northern grown farm seeds.

E. E. Stewart, Rives Junction, Mich.
Trade price list of gladiolus bulbs and hardy plants.

Green's Nursery Company, Rochester, N. Y. Fruit and ornamental trees and shrubs for mail order trade.

Schlegel & Fottler Co., Boston. A pretty garden scene from a photograph of two little children admiring a bed of sweet williams adorns the cover. Attractive, interesting and instructive from first to last page.

W. W. Rawson & Co., Boston.—Seed Catalogue for 1906. The front cover page carries some handsome Rawson vegetables embossed in colors, and paeonies have the back cover page to themselves. The book is well illustrated throughout.

The Conard & Jones Co.'s New Floral Guide for 1906 gives its covers to colored illustrations of Etoile de France and Baby Rambler roses. Roses occupy more than one-third of the entire bulk of the catalogue.

M. G. Madson Seed Company, Manitowoc, Wis., spring catalogue for 1906. Cactus dahlias on front and ripe corn on back form the subjects of cover illustration, in colors, and they are beautifully done. The contents comprise a host of good things for the flower and kitchen gardens.

Storrs & Harrison Company, Painesville, O., spring list for 1906. Baby Rambler rose in colors adorns the front cover, and a group of brilliant garden novelties are shown on the back cover. In illustrations and typographical excellence it reflects credit on the publishers, and it will be found worthy of perusal.

"Everything for the Garden" for 1906 is a masterpiece in catalogue making, of which Peter Henderson & Co. may well feel proud. "The Garden Beautiful" and "The Garden Bountiful" are the themes for cover illustration and the effect is particularly good. Besides innumerable half-tones, there are six colored flower plates.

GREENHOUSES BUILDING AND PROJECTED.

Townsend Harbor, Mass.—R. B. Baker & Son, one house 16x40.
Norwich, Conn.—Avery Bros., addition to house.
Hingham, Mass.—Mrs. Mason, one house, 20x90 ft.

A BARGAIN

I have for sale a modern range of greenhouses, 25,500 feet of gl ss., 1 1/2 miles from wealthy growing city of 28,000 people. Forty-five minutes from Pittsburg, Pa. Three railroads and express lines, 28 acres. Ideal soil for roses and carnations in abundance. Admirably adapted to the growing of small fruit and garden crops.

Sixty horse power boiler, steam heat. Free natural gas for all light and fuel for greenhouses, and farm buildings. A most complete private water system, 1,000 barrel storage tanks, large dam, never failing springs. Producing oil well on the farm. Buildings high and dry, away from all smoke, dust and dirt, fogs unknown, plants free from disease, houses well stocked and producing paying crops, best market selling high grade stuff direct to retailers. Best of reason for selling. Price, \$22,000, part on time, will show a net profit of 24% above expenses, can be increased. This offer will bear closest investigation.

GOOD MEN

When you need good men, skilled or unskilled, write:

THOS. H. BAMBRICK

34 South 7th Street, Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

WANTED—A practical young nurseryman for the propagation and growing of native and ornamental nursery stock, perennials, etc., for a small nursery in the Northwest. Must know plants and be a hustler. Give references, experience and wages expected. Address "Park Nurseries," care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED TO RENT—Three or four greenhouses and grounds in the vicinity of Boston. Address M. B., care of HORTICULTURE, 11 Hamilton Place, Boston.

Consult Buyers' Directory and List of New Offers on Pages 148, 149 and 150.

"CHEAP" GREENHOUSE MATERIAL

We do not aim to furnish "cheap" material but to supply good material cheap.

To do this, an up-to-date factory, large facilities and a thorough knowledge of greenhouse construction is necessary.

We possess all of these qualities. Send today for our catalogue.

And Still Another Particularity

Last week we talked together about the exact way everything was fitted for an exact place before it left the factory,

now just a word about the iron frame that goes into some of our houses: First we do all our own casting, we then know the kind of iron that goes into them,—every piece is smoothed off and trued up by an expensive, finely adjusted machine. Then every part where moisture is apt to collect is galvanized by our own expert galvanizers, and this is what results: High quality iron making a splendid grade of castings, each fitted to a nicety; no rust at usual rust points. You know how rust works away night and day, playing havoc with the life of a house! We take care of the rust just the same careful way we take care of everything else,—**ANOTHER PARTICULARITY.**

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

Queens, N. Y.

5 per cent. discount for cash with order.

HANNAH HOBART

The Pride of California. The Grandest of Pink Carnations

A shade deeper than Lawson, blooms four to four and one half inches across, full and regular. Stems long and strong. Does not burst the calyx. Growth free and easy. A prolific bloomer. Its flowers wholesale for a higher price than any other carnation in the San Francisco market. (See illustration and full description in Horticulture of July 1, 1905.) Orders for rooted cuttings booked now and filled in rotation beginning January 1, 1906, at

\$3.00 per 12; \$15.00 per 100; \$120.00 per 1000

Ferns for Every Day Use

ONYCHIUM JAPONICUM.

DOODIA ASPERA.

Doodia is a small genus closely related to Blechnum, having their fruit dots the same in one or more stripes on each side half way between the mid rib and the edge of the leaflets. They are very hardy, good decorative plants, requiring no heat, and very accommodating in regard to the place where they are grown. They are all of relatively dwarf habit, the foliage growing in a crown and resembling a many leaved little blechnum before they begin to branch out. In some of them the young fronds are of a beautiful rose turning from copper to very dark-green color, and of a very heavy texture. They like a very porous soil and good drainage and are easily propagated from spores which grow all over the greenhouse and under the benches. They can also be divided.

D. aspera, from Australia, is one of the most common. The simply pinnate dentated fronds about ten inches long are of a strong texture. The young fronds are of a very apparent red color. There are some crested forms from it in cultivation.

D. Blechnoides from Australia is one of the biggest growing species, resembling much *D. aspera*, but frond much longer and erect and does not branch out so readily.

D. caudata, from Australia and New Zealand, is a smaller, easy-growing species of softer texture, very common in greenhouses. The large leaflet is long.

D. dives, from Java, requires more heat. The fronds are larger and longer than in the others.

D. media var. *lunulata*, from New Zealand, is one of the nicest, of drooping habit. The leaflets are large, blunt at the top and eared at the base, set apart at the lower part of the frond and near together at the top.

The fertile fronds have the leaflets more narrow and longer; there are a few different forms grown.

Onychium is another small genus. There are only two species known in cultivation. They have their fruit dots like *Pteris* at the edges of the little leaflets. The edges are reflexed over the spore masses as indusiums. They like to be grown in loose soil and are easily propagated from spores and division. Their fine foliage is a good substitute for *adiantum*, is of heavier texture and keeps much longer.

O. Japonicum, the most common, is a native of Japan and Himalaya. It is cold house fern, very finely cut and of good durability.

O. auratum, from Himalaya, resembles much the preceding, but grows on single crown. The fertile leaflets are a little rolled up and of yellow color underneath. It does not like too much moisture, especially when young.

Am. Dutham

Tuberous Rooted Begonias

(See Colored Supplement)

The tuberous-rooted begonia is a very valuable flowering plant for the embellishment of the garden in summer time. Probably none other remains in flower for so long a time while giving such a brilliant display. It thrives far better when the summer is showery or even wet than if the weather during that time is hot and dry. Should the latter be the case the plants do not grow so freely, neither do they produce such

fine blooms as when the soil keeps moist and the atmosphere cool. Neither does their flowering season last so long.

There are now some very beautiful varieties on the market, and they are being added to annually. There are singles, doubles, crested, fringed, picotee-edged and even other sorts; some of the newest of the double ones are as perfect in contour and as delicate in coloring as the loveliest tea rose, the most elegant camelia, or the purest nymphaea. The hybridist has achieved wonders among these flowers. Not only has he added grace and elegance and greater variety of coloring to the blooms, but he has made the plants more floriferous, the flower stalks larger and stronger, and the blossoms to be borne erect. The latter is an important point; the flowers of the older sorts hung their heads on weak stems and so half their beauty was lost.

The varieties shown in the accompanying colored supplement are Mrs. Moger (salmon); Countess of Warwick (yellow and orange); and the Right Hon. J. Chamberlain (crimson). They were raised and sent out by Messrs. Blackmore and Langdon, Twerton Hill Nursery, Bath, where, as in the nurseries of other firms in this country, one may see in summer time a brilliant carpet of these showy flowers covering a large area of ground. An English begonia farm, when in the height of its beauty, rivals even the famous bulb fields in Holland. Even from seed sown in January you can get good flowering plants the first year; in fact it is the plants less than one year old that make such a gorgeous display in the nurseries. They are raised from seed sown in January, and are eventually planted out in early summer. Any rogues there may be among them are weeded out during the summer months, and finally when the frosts have put an end to their flowering period, which may be said to extend from July to October, the bulbs are harvested, ready for sale the following spring.

The tuberous begonia as we know it today, represented by varieties that range through innumerable and indefinable shades of color, owes its origin to the inter-crossing at different times of no less than five species: (1) *Begonia boliviensis*, with small, drooping, bright red flowers, which was introduced in 1864 from Bolivia; (2) *Begonia Pearcei*, also found in Bolivia and sent to England in 1865; it was from this species that the yellow flowered forms were first obtained; (3) *Begonia rosæflora*, introduced in 1867 from Peru, which has round, pale red flowers; (4) *Begonia Veitchi*, also found in Peru and introduced in 1867; the roundish flowers of present day varieties owe a good deal to this species; (5) *Begonia Davisii*, of dwarf habit and with scarlet blooms, found in Peru and sent over here in 1876. All these species were found by collectors sent out by Messrs. Veitch and Sons, Ltd., by whom they were put into commerce. The first white variety was raised by continual selection from the palest forms of *Begonia rosæflora*.

Harry H. Thomas

British Horticulture

A NEW TOMATO

The Rev. G. T. Laycock, a horticultural enthusiast, of Tenwick, Hants, has brought out a new tomato, named after himself. Last season it was grown by two other farmers besides himself, including one at Gurnsey. The latter out of 200 seeds raised 194 plants which were tried in pots. These were found excellent croppers. The fruit is of perfect shape, also of a good color when ripe. This grower had 3000 plants ready to plant out in the second week in January. Further experiments are to be made with the variety. Amongst those who have secured seed is Byron D. Halstead, professor of botany and horticulture at the New Jersey State Agricultural College, who had received a good opinion as to the tomato from Prof. W. W. Tracy of the United States Department of Agriculture. The variety is likely to become popular for market purposes.

THE CULT OF THE SWEET PEA

The National Sweet Pea Society have just published a very attractive annual, full of useful information and appropriate illustrations. Amongst the latter is an excellent picture of Messrs. W. Atlee Burpee & Co.'s sweet peas at the Lewis and Clarke Exposition, Portland, Oregon. In another reproduced photograph Mr. Burpee is seen amongst a wide expanse of sweet peas, chatting with the late veteran raiser, Mr. Henry Eckford. A third picture, taken when Mr. Burpee visited Europe last summer, shows the American expert in a sweet pea garden with Mr. Alfred Watkins, the president of the society, and Mr. Robert Sydenham, of Birmingham, one of the vice-presidents. The audit of the last show, published in the book, indicates the increasing popularity of sweet peas in this country. The total varieties shown were 119. It is announced that the society will hold a show in London on July 5th, and one at Ulverston, in Lancashire, on July 20th. Among the prizes is a 50 guinea cup, offered by Mr. Henry Eckford, of Wem, as a memorial to his late revered father.

THE WINTER FLOWERING CARNATION SHOW

I learn from Mr. Hayward Mathias, the prime mover in the matter, that satisfactory progress is being made with the arrangements for holding the first show of winter-flowering carnations at the Royal Horticultural Hall, on Feb. 13th. The National Carnation and Picotee Society were asked to organize a show of this character, but they were unable to take the additional responsibility. It is also intended to hold a meeting, at which a proposal will be made for forming a winter-flowering carnation society. "I think it very essential that we should have a society of this kind," Mr. Mathias informed me, "seeing how increasingly popular the American varieties are becoming in this country." One of the matters which it is necessary should be taken up by the society, when formed, is the registration of the new varieties to prevent over-lapping. Mr. Mathias favors the adoption of the plan which has been in vogue with the American Carnation Society to secure a proper registration as each new sort is brought out. There have been cases where an American variety has been brought over and sold in this country under a new title, and this has caused confusion and annoyance in trade circles.

Exhibition Groups

Any attempt to advise on "The art which doth mend Nature" must necessarily be on broad lines, leaving nice points of detail to the inspiration of the moment, according as individual taste may direct; the plea now made is for more adequate forethought and preparation with regard to a fixed plan or central idea, around which the material to hand may be most artistically fitted to the best advantage.

Too little pains are often taken to provide an effective exhibition. Viewed as a whole, there is not seldom an incongruity of separate exhibits, coupled with overcrowding of really good material which defeats the whole purpose in view. Much might be done in this matter by the executive as well as the more effective distribution of specimens for the decoration of the building, but for an ideal place there is no better setting than a large conservatory with its hanging creepers, tree ferns, palms, etc., minus, of course, gaudy banners and artificial trimmings. There is much to be said for a trade group in a corner or side position in preference to a central place; less material is required and the whole may be viewed at a glance with greater effect. A good space area being secured, not only the general effect, but the object may be attained of bringing out in bold relief all rare or striking subjects either by massing together, or by individual elevation or isolation. As a general rule the massing of stiff looking flowering plants is to be commended, giving as it does if they are kept low a suggestion of solid worth and thus securing attention; by these means, combined with a more natural arrangement of foliage plants, the two ideas of solidity and grace may be harmoniously attained; an exception to massing, however, should be made with orchids, as they are best suited to an irregular setting amid greenhouse plants and ferns. An open, light arrangement should be aimed at, pairing and stiffness being broken up as much as possible. At the same time, with the massed groups, a certain conformity to the original outline of the main group, be it either star, oval or irregular, should be adhered to; this repetition in outline of the larger whole, in miniature, may be carried out with fine effect; this uniformity of purpose may be lightly veiled by the introduction of a graceful plant into the centre of each group, also of smaller dot plants, standing well up above the rest of the mass of blooms, filling in the intervening spaces between each group with a suitable foil of foliage, adapted to each separate group of colors. A fine centre specimen plant is a necessity in a large hall and medium specimens of a more airy character as isolated corner plants may be used, but always anything in the way of banking up with foliage plants should be avoided except in the way of filling to hide stools, pots, etc. The main outline should be irregular with jutting points and scalloped curves, and on the outside tiny groups of anything choice, the whole being neatly edged with fresh mountain moss. Much might be said of color blending, but as a general rule violent contrasts should be avoided; let graduation between extremes be the rule, adapting also the foliage plants to the flowering with this end in view.

Cards should be small and neatly, yet plainly written and attached to thin, green-painted sticks; everything required should be carefully thought out beforehand and noted on paper; nothing must be left to chance. If a suitable place can be found the whole group may be set up beforehand and packed in vans in the order required; nothing leads to confusion when

time is limited like waiting for a needful item or looking for it among the general disorder.

These are a few hints and general rules which make for success; promptness, forethought, order and a plan will carry a man far, but if one lacks the fine insight for shape, tone and adaptation, then opportunities for creating and linking together nice points of detail, may be missed. It is said the true artist is born, not made, but if the love of beauty is within, experiment, patient application and experience will bring one to the knowledge of what is natural and what is best.

Edgar Elvine

Winter Flowering Sweet Peas

Editor HORTICULTURE:

A few weeks since I saw a short article on Sweet Peas in Winter by William Sim (from HORTICULTURE) given in the Journal of Horticulture, of London. As I was experiencing the difficulty mentioned of getting the ordinary summer varieties to bloom now, I am writing to you to see if Mr. Sim will give a little more information, and say what are the varieties that will bloom during autumn and winter, about what heat he recommends for them, and any other particulars he may think necessary to grow them well. Should he be willing to contribute a further article on the subject, it will be appreciated. I am, dear sir,

Yours truly,

D. ARKELL.

Sussex, England.

Editor HORTICULTURE:

In answer to your inquiry of the 22nd with enclosed letter, the following notes may be of some benefit to your correspondent. The varieties I have grown for autumn and winter flowering are as follows: Burpee's Earliest of All, Burpee's Sunbeams, Mont Blanc, Christmas White, Christmas Pink, Christmas Red and Florence Denzer.

Mr. Zvolanek of Bound Brook, N. J., who is a sweet pea specialist in winter blooming varieties, sent me some new varieties on trial. These include a great variety of colors, the best noted being the color of Catherine Tracy, and some fine purples. Burpee is now sending out Earliest White, habit being similar to Earliest of All. This will undoubtedly be a fine addition.

It will be seen in a short time the winter blooming varieties will be as varied in their color as the summer-flowering varieties, and the quality of blooms will simply outclass the present summer-flowering varieties. Perhaps it may not be out of place to state that my peas are now in full crop, Earliest of All and Christmas now standing 10 feet high with blooms from base to top. Mont Blanc now stands 12 feet high, and is a mass of bloom. This variety looks as if an additional four feet of vine will be added before this crop is finished, which will be about May 1st. With vines twelve to sixteen feet in height it will be seen that high and light houses are best adapted to the sweet peas in winter. The rows are five feet apart. A night temperature of 50 degrees with a rise of 10 to 15 degrees through the day in bright weather has been the rule.

Our supplement

We present our readers with another colored plate, with this issue. Tuberous begonias are the subject and we hope that the beautiful picture may serve its purpose in directing attention to the rapid advances being made in the improvement of this unrivalled summer bedding plant. Advertisements of tuberous begonias in this number should not be overlooked.

Let us hear from you

For the gardener or florist, be he learner or expert, nothing is more essential today than good reading, if he would hold a dominating position in his profession. Realizing this and responsive to the oft-expressed wish of the craft, HORTICULTURE's intention is to provide its patrons with the best reading matter obtainable. If you have in mind any topic on which you desire more light, write and let us know and we shall endeavor to meet the want.

The festive board and the fraternal spirit

The club or society banquet is a great harmonizer. Under the genial influence of the fraternal spirit engendered, the wicked competitor seated across the table looks almost human and all discordant impulses are dissipated in the smoke of the club cigar. Once a year is too seldom for these reunions with their opportunities for making new friendships and freshly cementing old ones. It is not the cost of the symposium that gives it its quality but the spirit of family accord and cheery festivity which abounds when all rivalries of business put away for the time being, we meet as brothers all.

The coming exhibition of roses

Those of our readers who can possibly do so should plan to be in Boston on the occasion of the annual meeting and exhibition of the American Rose Society, March 23 and 24.

The combined exhibition of this organization and the Massachusetts Horticultural Society will afford a rare opportunity for the progressive gardener or florist to gain new ideas and fresh stimulus for work on advanced lines. The gathering of experts promises to be a notable one and the benefits of personal contact with these men amid such surroundings cannot be adequately estimated. The expense and time involved are as nothing when compared with the substantial profits to be gained.

The commercial value of the exhibition

It was estimated that fully ten thousand people visited the recent carnation exhibition in Boston on one day. To anyone not an incurable pessimist the enormous pecuniary value to the trade of this public inspection of the choicest product of the florist's art must be readily apparent. And the direct business results are insignificant as compared with the elevating of popular ideals whereby the people become better informed as to standards of quality and are educated away from cheap grades and curbstone values. The local retail florist, as a direct beneficiary, does not always realize the importance to him of promoting these enterprises. Good judgment, even from the most selfish standpoint, should impel him to line up as an active supporter of all such affairs, for, the more his customers see and hear on these lines the more interested they will become in him and his goods.

The florists' club and the retail dealer

Why the majority of the retail flower dealers in the metropolitan centers absent themselves from the meetings and festivities of the local trade clubs and societies is a problem as old as the history of the florists' clubs and a satisfactory solution seems as far off as ever. It is true that in this department of the trade leisure evenings are a rare luxury but in the case of the growers this impediment is pretty well balanced by the greater distance of the latter from the meeting places. The plea sometimes set up, that no encouragement or welcome is extended to the retail store element by those in official position seems very weak. As a spring cannot rise any higher than its source so an organization cannot be expected to extend its scope beyond the topics that interest its active workers. The doors being wide open to all, it remains only for any element or interest to assert itself. He who stays away and then complains that his interests are neglected may expect to have his sincerity questioned. What do they say "down east" about the man who will neither fish nor cut bait?

OBITUARY.

M. Ernest C. M. Fierens.

Death has been very busy of late among eminent European horticulturists. The gentleman whose demise it is our sad duty now to record was a man of world-wide fame for, as the secretary of the Royal Agricultural and Botanical Society of Ghent, he was known and respected not only by those numerous visitors to the great quinquennial horticultural shows that have been held for so many years in the quaint old Belgian town where he lived, but also by other friends who had the honor of his personal acquaintance. Like his old friend and colleague, M. de Meulenaere, who predeceased him only by a few weeks, M. Fierens was by profession a lawyer, but yet found time to devote much energy to the work of organizing the great floral festivities for which Ghent has, so long been renowned. He was also an ardent amateur and a frequent exhibitor. As a judge his services were in constant request at home and abroad, and the last time we had the pleasure of meeting him was at the chrysanthemum show of the French N. C. S. at Lille in 1903. Although we thought he had aged considerably since our last meeting yet he was still as of old, genial, courteous and hopeful of great things when his society should celebrate its centenary in 1908, active preparations for which are now being made.

M. Ernest Constant Marie Fierens, to give him his full name, was a solicitor at the court of appeal at Ghent, a knight of the Order of Leopold, an officer of the Merite Agricole of France, a distinction conferred upon him for meritorious services in connection with horticulture. He was also an honorary member of several of the leading horticultural societies in Europe. His death occurred on the 19th January last, in his 65th year.

M. O. de Meulenaere.

We have now to refer with pain to the death of M. O. de Meulenaere of Gendbrugge, a Belgian enthusiast in horticulture and an exhibitor at most of the famous Ghent Horticultural gatherings. The deceased was a busy man, the President of the Court of Appeals at Ghent, but he found time for the delights of horticulture. We remember with pleasure some of his very fine exhibits of chrysanthemums there, and also the service he rendered to the cause of chrysanthemum nomenclature by his literary work. In 1890 he published his "Liste descriptive des Chrysanthemes d'hiver," which contained the names of all the varieties then known and grown in Europe, with raisers' names, dates of introduction, section and description. This work was continued by the publication of a supplement four years later, and then came a second and a third supplement, which brings us to the year 1898. It was largely a labor of love, but the service to horticulture was considerable, for it placed on record particulars that could probably not now be got together at all. As a work of reference we even now have frequent occasion to refer to it.

M. de Meulenaere suffered from a long and painful illness, and died at his residence on December 7 last. He was an honorary fellow of the National

Chrysanthemum Society of England, and held the society's silver gilt medal for the work he accomplished in preparing the catalogue already referred to. He was also commander of the Order of Leopold and had several other orders. C. HARMAN PAYNE.

Mrs. A. D. Wood.

Mrs. A. D. Wood died at her home in West Newton, Mass., on Feb. 5. Mrs. Wood has been an invalid for a number of years. Previous to her illness she had been one of the most faithful attendants at the meetings and exhibitions of the Massachusetts Horticultural Society and was a constant exhibitor, displaying much artistic taste in the arrangement of flowers. Her bright, amiable, kindly temperament made her a great favorite with everyone who knew her and sincere sympathy has been extended during her long illness by a host of friends, who held her in affectionate esteem. Her husband, E. W. Wood, is well known as a member of the State Board of Agriculture. One son, Elijah A., is also well known as a chrysanthemum expert, and another, W. K., represents the Florists' Exchange at Chicago.

Frank W. Dobbs.

Frank W. Dobbs, who has been associated with Wadley & Smith, as manager of their New York store, died at his home in Scarsdale-on-the-Hudson, on Feb. 6, aged 31 years. He was a bright, popular young man, and his untimely taking away is keenly felt by a large circle of friends in the trade.

NEWPORT NOTES.

We have in Newport a park commission, the members of which are appointed by the Mayor. In the past the commission was not overburdened with a knowledge of things horticultural—not their fault, however—but His Honor the Mayor of today is a member of the Newport Horticultural Society, and that is enough to lead us to think that when a vacancy occurs a horticulturist will be asked to fill it.

The following three estates in Newport are undergoing complete renovation: Mrs. John Nicholas Brown's, Mr. W. S. Wells' and Mr. George Gordon King's. At Mrs. Brown's the most important feature will be hardy plants and extensive shrubberies. At Mr. Wells' the purchase of the adjoining estate made it necessary to remodel the whole, which is being effected by the moving of very large trees. A continuous terrace will be constructed around three sides of the residence, upon which choice evergreens and box will be planted. At Mr. King's the work chiefly consists of providing vistas through the many large and beautiful trees, and bordering all the grounds with shrubberies.

AN ENDORSEMENT FOR MY MARYLAND.

We have received through H. Weber & Son copy of a letter from a customer who had received a few plants of carnation My Maryland on trial. These plants, which were from late propagated stock and not large when delivered in September last, have thrived and are declared to be the strongest growers in the establishment, with an exceptional production of high-grade blooms.

A WORD FROM PRESIDENT FISHER.

Editor HORTICULTURE:

In your issue of last week I note your editorial commenting on a quotation from the Florists' Exchange wherein my remark as to the "exhibiting of worthless carnations at the A. C. S. meetings is a menace" to its progress and usefulness, is grossly misconstrued.

First let me say that few carnation growers in this country interpreted my meaning as trying to "down" or belittle the efforts of the small grower. Quite the contrary. My protest was entered in behalf of this class who are usually the sufferers. The "big fellows" usually go around and buy on their own judgment. But the rank and file usually invest in a novelty, from an estimate of what they hear or read of its commercial value. A carnation may be almost perfect during the fall and early winter and again from March on, but simply worthless during late December, January and February, and when any introducer discovers a variety developing such defects, he has no right to impose upon the trade by disseminating it and hiding this fault. This is what I meant in my address when I stated: "Which the exhibitor well knows will not stand inspection in his greenhouses at this season of the year."

I have always considered myself one of the "small growers," and my endeavor shall be to increase their number in our membership, not detract from it.

Later I shall have something more to say on this matter, which I consider of the most vital importance not only to the well being of the American Carnation Society but to every carnation grower.

PETER FISHER.

Ellis, Mass., Feb. 7, 1906.

NEWS NOTES.

The Hinode Florist Company, New York, has incorporated, with capital of \$10,000.

Mrs. May Fisher, of the firm of Fisher & Son, will hereafter do business in her own name at 537 Main St., Worcester, Mass.

E. H. Hunt, Chicago, has incorporated, with capital stock of \$40,000. The incorporators are C. M. Dickinson, William E. Lynch and Edgar A. Buzzell.

Mr. William Scott, for many years foreman for Poehlmann Bros. at their greenhouses at Morton Grove, Ill., has purchased a half interest in the business of William Cunningham of Grand Rapids, Mich., and the new firm will be ready for business about March first.

At the meeting of the New York Florists' Club on Monday evening, February 12, carnations and orchids will be the objects of special interest, and a fine exhibition is promised. The following cash prizes will be offered for carnations: Best 25 blooms in four distinct varieties, first, \$15; second, \$10; third, \$5; best 25 blooms displayed, \$5.

How big are the blooms of that carnation seedling you are fondly cherishing? Send to Kroeschell Bros., 35 Erie street, Chicago, for one of their measuring devices. Ingenious, unimpeachable, and may be had for the asking.

NEWS OF THE CLUBS AND SOCIETIES.

NEW YORK FLORISTS' CLUB'S ANNUAL DINNER.

It was a very merry affair in which about fifty members of the New York Florists' Club participated last Saturday evening. As to the repast it is sufficient to say that it was under the auspices of the well trained committee which has officiated for so many years and at the St. Denis hotel, which is a guarantee of its high quality.

After the eating was finished, President John Scott called to order, and expressing the hope that all had left their troubles behind and would have a good time, he introduced the gifted toastmaster, Patrick O'Mara. Mr. O'Mara remarked that the intention was to devote the evening to entertainment and a jolly good time rather than to an intellectual feast, and, therefore, no program had been prepared. So he would simply turn on the gas and let things take their course. A toast to departed members was drunk in silence, standing, and then George B. Nash of the N. Y. Botanical Garden was introduced. Mr. Nash spoke of the relations between botanical garden work and horticulture and advocated work on broader lines by the scientific institutions. Horticulture, he said, takes the cold facts of scientific investigation and amplifies them, clothes them and gives them the warmth of life. As compared with botanical gardens abroad he declared that our collections in this country lack variety.

The toastmaster then addressing the ex-president, F. H. Traendly, spoke of the demand upon the time and brains of one filling the position of president and complimenting that gentleman upon the popularity and success attend-

ing his administration, handed him in proof of the esteem of his fellow-members a beautiful diamond pin. Tumultuous cheers followed the presentation. In response, Mr. Traendly expressed his deep appreciation of the gift and generously attributed such prosperity as the club had enjoyed, to the loyalty of the members and the good work of his predecessors. He expressed his belief that the time is not far distant when a waiting-list for applicants for membership will be a regular feature.

E. V. Hallock made a very interesting and witty speech, quoting from Burns and Bacon, and expressing his deep affection for floriculture and those engaged in it. Another gem among the speeches was that by treasurer C. B. Weathered, who congratulated the club on the interest being manifested by the younger element. He advocated the securing of a permanent club room.

Jas. T. Scott, being introduced as a drummer, denied the soft impeachment and contributed a merry speech replete with Scottish logic. Alexander Wallace next discoursed upon the horticultural press, the "art preservative," telling of the value of the press to the profession, its readiness to welcome criticism and its devotion to the best interests of its patrons.

C. H. Totty being given the toast "New Jersey," where the horticulturists' lot is encumbered with malaria and mosquitoes, switched off and talked of the club instead and his delight at the prospect of active work ahead for the trustees of which he had been recently elected a member.

A vote of thanks was given the dinner committee to which Walter F.

Sheridan responded, a vote of condolence to the absentees to which nobody responded. Mr. Hilton spoke for the cemetery florists and Mr. Donohoe for the retailers, regretting that so few of them were in evidence on this glorious night. A. L. Miller followed on the same subject and then with a round of cheers for the toast-master the pleasant evening came to a close.

Between the speeches a clever vaudeville delegation entertained with song and story, with choral effect by the audience. The talents of the members were well-represented by the Rickard Brothers and J. B. Nugent whose vocal abilities were received with appreciative applause.

NEW JERSEY HORTICULTURAL SOCIETY.

A large number of friends gathered to help celebrate the twelfth installation dinner of the New Jersey Horticultural Society at their rooms on February 2. The gathering was informal and the speeches brief and witty. Among the speakers were Arthur Herrington, Chas. H. Totty and J. Austin Shaw. The Morris County delegation was large; the fun fast and furious particularly toward the close of the evening; the refreshments harmless, and the musical program much enjoyed. A large floral display filled the benches, with Peter Duff's Euphorbia jacquiniæflora with its bending sprays adorning the central position; an entire table of orchids and Lorraine begonia sent by William Barr and grown by A. W. Bodwell; carnations Victory from Guttman & Weber; Winsor the recent prize winner at Boston, Helen M. Gould and White Enchantress from F. R. Pierson Co.; and orchid blooms from Lager and Hurrell and Thomas Jones. A Laelia anceps Stella grown by A. W. Bodwell received 95 points. Some New York State apples were displayed by J. B. Davis, who has recently been at the growers' convention at Rochester, showing how things were done there. The judges for the evening were C. H. Totty, Arthur Herrington and Robt. M. Schultz.

JOS. B. DAVIS, Sec'y.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held in the Vanderbilt building on Tuesday evening, Jan. 30, President Joseph Mooney in the chair. A fine exhibit was made and the prize, a clock given by Mr. Joseph Bradley of Dobbs Ferry for the best 12 sprays of mignonette, was won by John Featherstone, Greystone, Yonkers. Joseph Bradley received honorable mention for a fine vase of Her Majesty mignonette.

The event of the evening was an essay on "Mignonette" by Mr. Bradley. This was followed by an interesting discussion on the queries in the Question-Box.

The annual fall exhibition will be held in Music Hall, Tarrytown, on Oct. 30, 31 and Nov. 1.

JAMES BALLANTYNE,
Cor. Secy.

QUEEN BEATRICE

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

A delegation of club members will attend the annual banquet of the North Shore Horticultural Society on Thursday, Feb. 15. Members are invited to take 10.45 a. m. train at North Union

station. A number of prominent North Shore estates will be visited before the banquet. The return to Boston will be made on train leaving Manchester at 10.10 p. m. **W. N. CRAIG,** Secretary.

NEWPORT HORTICULTURAL SOCIETY.

The meeting nights of the Newport Horticultural Society have been changed from the first and third Wednesdays to the second and fourth Tuesdays. But one exhibition will be given this year and it is expected that this one will, in point of attractiveness, equal any two heretofore held. This exhibition will be in the Casino some time in August.

AMERICAN ROSE SOCIETY.

The annual report and bulletin of this society has been issued from the office of Secretary W. J. Stewart. It contains much that will prove of interest and value to the rose grower and dealer, every one of whom should identify himself with the organization and thus become entitled to receive a copy of this book.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

The annual meeting of the executive board will be held in Dayton, Ohio, on Monday, March 5, 1906. Members of the society or others having suggestions to make whereby the usefulness of the organization may be increased and the good of the profession promoted in any of its branches, are cordially invited to send such suggestions in care of the secretary and they will receive careful attention. Address, Wm. J. Stewart, Secretary, 11 Hamilton Place, Boston.

Carman's Antipest

INSECTICIDE AND FUNGICIDE

For the Garden, Orchard and Greenhouse. Nonpoisonous and harmless to vegetation.

Kills Green Fly, Aphides, Bark Lice, Thrip, Mealy Bug, Red Spider, Scale, Wire Worms, Ants and Slugs.

This is the Grower's Friend, handy to use, cheap and effective, mixes readily in water. Destroys all insect pests and keeps down mildew. \$1.50 per gallon. Also in quart, half gallon and in bulk. Send for circulars.

FLORISTS' CLUB OF PHILADELPHIA.

At the regular meeting of this organization, on Tuesday, Feb. 6, there was a large attendance, and many excellent exhibits were staged. Carnations were shown in grand shape by Guttman & Weber, F. R. Pierson Co., J. E. Haines, E. A. Stroud, H. Weber & Sons, Cottage Gardens, W. J. & M. S. Vesey, Peter Fisher and others. Papers on the results of the recent carnation meeting at Boston were read by A. M. Herr and E. A. Stroud. It was arranged to have a ladies' night in latter part of this month. At the meeting March 6, Mr. Huebner will talk on railroad gardening, and there will be an exhibition of roses.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of this society was held Feb. 3, President Carlquist presiding. The society has arranged to hold its annual dinner Feb. 17. March 3 has been set apart for Carnation Night, and March 17 for Rose Night. It was decided that three shows be held this year, namely, Rose and Strawberry Show, June 26; Annual and Perennial Show, Aug. 15; Chrysanthemum Show, Oct. 24-25. Schedules for the first two and preliminary schedules for Oct. 24 and 25 will be printed, and anyone interested can receive same on application to the secretary.

GEORGE FOULSHAM,
Secretary.

CLUBS AND SOCIETY NOTES.

The annual banquet of the North Shore Horticultural Society will be held at Town Hall, Manchester, Mass., on Thursday, February 15, at six o'clock.

At the meeting of the society on Feb. 2, President James MacGregor was presented with a handsome oak roll-top desk and chair.

The next meeting of the Horticultural Society of New York, will be held on Wednesday, the 14th inst., at 8 o'clock p. m., in the rooms of the American Institute, 19-21 W. 44th street. It will be Carnation Night. Robert Craig of Philadelphia, will speak on "Carnations Past and Present," and the following prizes are offered for cut blooms: Fifty white, 50 pink, 50 red, 50 crimson, 50 variegated. First prize, \$6.00; second, \$4.00.

The Montreal Florists' and Gardeners' Club held their annual dinner at the Lakeside Hotel, Lachine. About 50 sat down to a very enjoyable repast after which a very pleasant evening was spent, with the usual toasts, speeches and songs. President Dawes of the Lachine Horticultural Society made a speech in which he thanked the members for their friendly visit and extended them a hearty welcome. Wm. Ewing responded with a long speech on Seed Trade, in reply to the toast, "The Seed Trade."

Cut Flower Market Reports.

This market is practically **BOSTON** barren as regards American Beauty roses and blooms of good finish are almost out of the question. Bride and Bridesmaid roses are more abundant than they were one week ago. On the other hand carnations and violets are received in unwieldy abundance and prices are downward tending. Bulbous stock is very much overstocked. Yellow narcissi have broken the market. Local and out-of-town shippers are loading the wholesale dealers with blooms of finest quality, the prices for which are disproportionately low. Carnations are fine as to quality, but realize low figures excepting in the case of rare novelties.

The volume of business **BUFFALO** was largely augmented on Saturday and Monday in consequence of the heavy demand for carnations. Monday, the 29th, McKinley Day, was previously well advertised by florists and press, which helped considerable to swell the sales, reports stating that more sold this year than previous years. The demand for white was small, and consequently a good many were carried over. Roses sold well under normal supply and prices hold firm. Bulbous stock came in fast but moved fairly well, considering the amount handled. Demand was best on yellow tulips. Lily of the valley of fine quality could be seen, but sales were not brisk. Violets were quite plentiful and at times many sold below list price. Lilies were more plentiful, while peas and mignonette, quality good, sold rapidly. Sales of southern smilax and other greens improved somewhat. The thermometer dropping to zero for a few days brought some stock in frosty condition.

There has been but **CINCINNATI** little change in the condition of the cut flower market during the past week. A scarcity of roses is to be expected at this season of the year and in this we are not disappointed. It has been a long time since first-class stock was as scarce as it is now in Cincinnati, but that which is one man's loss is another's gain. If the public can't get roses they take something else instead. Just now bulbous stock receives a hearty welcome; especially is this true regarding colored flowers, such as tulips and daffodils. Several large wedding orders have been booked for this month, in which Harrisii lilies will play an important part. Lily of the valley is coming in nicely and finds a ready sale. In fact, anything

in the cut flower line that is fairly good is eagerly taken. Green goods are also scarce and if you get what you want it is because you have placed your order in advance.

Business seems to keep **DETROIT** pretty lively although not as brisk as last week, but the cut flower demand holds steady. These flowers affected by the recent mild weather should certainly display their best efforts now that the glass has reached zero. Roses still continue to come under requirements.

Business conditions the **LOUISVILLE** previous week were very satisfactory with some very cold weather. Carnations in quality are only fair; the supply is very satisfactory, with the demand good. Roses found a good demand, with the quality and supply about up to expectations. Lilies of the valley and violets find a satisfactory demand, the quality of the latter being very good. Mignonette, narcissus, hyacinths and other bulbous stock moves up to expectations, with the supply generally good.

On most lines of cut **NEW YORK** flower stock, on which receipts are heavy, business is exasperatingly slow, and sales in quantity are made at very low figures, in order to unload. This applies with especial force to bulbous material, carnations and the lower grades of all varieties of roses. Strictly special American Beauty Roses are very scarce and obtainable only in small lots from even the largest growers; hence, for the time being these bring record prices for this season of the year. The retail florists generally report the best winter business thus far since 1903.

During the past week **PHILADELPHIA** the volume of business was about normal with no very decided features worthy of mention. Beauties were not plentiful but demand was a little off, and the same may be said of Liberties and Richmonds. Brides were scarce, and there was rather more than the usual demand. The quality of both these and Bridesmaids was very good. Chatenays and Golden Gates were about the only other varieties that cut much figure. Enchantress is still on top in the carnation line. All varieties of carnations are fairly plentiful and of good quality. Lilies, single and double daffodils, and tulips are in evidence with active call; especially for fancies of the last mentioned. Paper whites and Roman hyacinths are being disposed of in great quantities, but they ought to be brought in more gradually. Cypridiums are nearly over, and it will not

be long before cattleyas will be on the scarce list. There is more lily of the valley coming in than the market will absorb; but with careful handling prices are being kept steady.

PHILADELPHIA NOTES.

The Millbrook-Lea Greenhouses had a severe fire on the 4th inst. It started in the boiler room. The whole plant was put out of commission. Loss not stated at this writing, but heavy. This establishment is at Whitford, Pa., 28 miles from Philadelphia.

Howard McKissick, lately associated with his brother W. E. McKissick in the wholesale cut flower business, has bought out another line of trade out in the country. H. Kreinberg takes his place with Mr. McKissick.

We hear of a new begonia around Newport called "Scarlet Gem" which is said to be something very fine, and is supposed to be a dwarf form of the Erfordi type of very free blooming habit and very brilliant color, making it a grand thing for bedding. Can HORTICULTURE give us any authentic information about it?

Mr. and Mrs. Robert J. Halliday of Baltimore passed through here recently on their way home from the honeymoon. Mr. Halliday has family relatives in Philadelphia and a pleasant gathering took place at The Colonade on the 5th inst. The reception was strictly private but Mr. Pennock heard of it and managed to surprise the guests with a bunch of flowers for the dinner table.

The H. F. Michell Co. report a heavy demand for English mushroom spawn this season, and have been greatly astonished at the call for the new "pure-culture" of American manufacture. This is in line with the experience of others in the seed trade lately.

BUSINESS CHANGES.

Mrs. L. J. Denton has leased the greenhouses of Miss Lincoln on Park avenue, Plainfield, N. J.

The Wilcox Canadian Land Co. was recently incorporated, to handle about 12,000 acres of land recently purchased near Winnipeg, by J. F. Wilcox of Council Bluffs, Ia. Capital stock, \$50,000.

The store opened about two months ago by Newman, at the corner of Mathewson and Westminster streets, Providence, R. I., is closed, and the business has been transferred to their Boston store.

President T. W. Head delivered an instructive lecture on "Fertilizers, and How to Use Them," before the New London Co. Horticultural Society, Conn., on Jan. 30.

GOOD MEN

When you need good men, skilled or unskilled, write:

THOS. H. BAMBRICK

34 South 7th Street, Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

A BARGAIN

I have for sale a modern range of greenhouses, 25,500 feet of glass, 1½ miles from wealthy growing city of 28,000 people. Forty-five minutes from Pittsburg, Pa. Three railroads and express lines, 28 acres. Ideal soil for roses and carnations in abundance. Admirably adapted to the growing of small fruit and garden crops.

Sixty horse power boiler, steam heat. Free natural gas for all light and fuel for greenhouses, and farm buildings. A most complete private water system, 1,000 barrel storage tanks, large dam, never failing springs. Producing oil well on the farm. Buildings high and dry, away from all smoke, dust and dirt, fogs unknown, plants free from disease, houses well stocked and producing paying crops, best market selling high grade stuff direct to retailers. Best reason for selling. Price, \$22,000, part on time, will show a net profit of 25% above expenses, can be increased. This offer will bear closest investigation.

WHAT?

"What,—buy material from an outside firm? Not I."

"For twenty years I have purchased my greenhouse material at home and know what I get."

Even with that kind of a florist we would like to discuss greenhouse construction.

We would like to tell him why our material is better and how he can grow better plants by having houses that are built in the right way.

If you are interested, write us.

For Greenhouses

There is a deal of Talk

about sap free Cypress and it's safe to say 9 out of 10 men who buy cypress materials can't tell by its look whether it's sap free or not. Suppose it's painted, then who can tell? Now there's two kinds of sap in cypress — the blue sap, that anyone can see and which rots out at once — and the white sap which looks just as solid, cuts just like the sound wood, and requires an expert to detect it. 20% of cypress is apt to be sappy — we cut out and **burn up** that 20%. When you order materials from us, you don't get "firsts" in one part and odds and ends of seconds worked up in the small, less "in sight parts." It's a straight top notch quality from start to finish.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

Ruellia Macrantha

Ruellia is a very nice genus of plant from the Acanthaceæ family nearly all coming from South America and West Indies. They are very showy, but seldom seen in cultivation, and it is surprising that a plant like *Ruellia macrantha*, which is not new, but certainly one of the most showy flowering plants, is not more generally cultivated for Christmas and New Year's trade. It flowers for more than two months from December to February, keeps well as an apartment plant and for the conservatory it is of the greatest value. The trumpet-shaped flowers grow in terminal bunches, two to six open at one time, each bloom individually about two inches broad and of a nice magenta rose color—dark when grown near the light. It makes, when well-grown, nice bushy plants with handsome foliage, about two feet high.

Two-year-old plants are the best. They have to be cut back late in the spring and pinched if some branches have a tendency to run up. They like a light, rich soil

with plenty of water and may be kept during summer pot-buried in an old frame in full sun. It is well to move them once in a while to keep the roots from growing out of the pots. At the end of September when the nights begin to cool they have to be shifted into bigger pots, taken in and placed as near the glass as possible. In this way they will make much stronger, shorter, shoots than when grown in houses and the flowers will be more numerous. A little liquid manure will help them.

They are propagated from cuttings, which grow readily, and when made early flower the first year, but will not make the nice bushy plants they will the second and thereafter. The picture shows a three-year-old plant.

Am. du Ham

Pruning Ornamentals

To the Editor of HORTICULTURE:

Dear Sir—I was very much interested in the article upon pruning ornamentals, by R. L. Adams in your issue of January 27.

I heartily endorse every word of the article with the exception of the paragraph in which he advises the heading back of elms, oaks and maples. Head in an American elm and cause it to make a low, dense head and you have robbed it of its tall, straight stem and long, springing branches which, surmounted by a noble crown, are the features from which it derives its grandeur. Also, the acute angle which is formed by two or more branches as they rise from the trunk renders the tree liable to split in a storm. By beheading a young elm this liability is increased as a cluster of new leads at once forms around the severed end; the base of these new leads forms a weak and unnatural union which sometimes proves disastrous as the tree reaches maturity. I could point out more than one fine elm which has suffered from this cause; and in repairing one which had thus suffered, I found decided evidence of the top of the small tree which had been

overgrown but which had proved a source of weakness and eventual ruin to the tree. The same will apply in a measure to the maples. But if you want a tree with a low round head why not plant a maple instead of an elm?

The long, lank, appearance of the maples spoken of by Mr. Adams, to be found along roadside and in parks is to be accounted for by the fact that roadside trees are invariably crowded, and their lower limbs are trimmed off to make way for traffic. In parks where they are planted in groups, those trees which grow on the outside of the groups make a pathetic effort to cover the naked legs of the group by producing low growing limbs. The maple and the oak given plenty of room to grow will produce rounded, symmetrical heads, each characteristic of its species, graceful and sturdy and which cannot be improved upon by the work of the skillful pruner.

Thomas White

British Horticulture

DAHLIA CULTURE

The National Dahlia Society have just issued their annual report which is of a highly satisfactory character. They have also published a supplement to their official guide, in which the following revised selection is given of the 24 best cactus varieties for exhibition: - Alexander, dark crimson, flushed maroon; Clara G. Stredwick, salmon tinted yellow; Columbia, vermilion, tipped white; Conrad, terra-cotta; Crepuscule, yellow shading to amber; Ella Kraemar, rosy pink; Fairy, white; F. H. Chapman, apricot; Florence M. Stredwick, pure white; George Gordon, yellow, shaded orange; Harbour Light, orange red; H. F. Robertson, dog yellow; Ianthe, yellow-buff, edged pink; J. B. Riding, centre plum; Lady Colin Campbell, pale yellow, shaded orange; Mrs. H. L. Brousson, yellow, shaded salmon; Mrs. J. J. Crowe, yellow; Pearl, pearly pink, tipped white; Premier, crimson scarlet; Rainbow, light pink; Sirius, bright yellow, striped and speckled crimson; W. E. Dickson, crimson; W. F. Balding, yellow, shaded salmon. There is no cessation in the raising of new varieties. The total number of certificates awarded to novelties last year was 32, as compared with 21 in 1904, the cactus varieties preponderating.

THE NEW GARDEN OF THE R. H. S.

During the two years the Royal Horticultural Society have been in possession of their new garden at Wisley, satisfactory progress has been made in getting the place into a thorough working order. About seven acres of the most attractive deciduous flowering and foliage trees have been planted. Five acres are devoted to fruit trees, 3000 trees having been planted. The aim is to secure a selection of the best varieties. Four acres are allotted to vegetables, and in the floral section over a thousand roses (teas and hybrid teas) have been planted. The soil is too sandy for hybrid perpetuals. Glass houses have been erected, including three vineries for early, midseason, and late grapes. In one house, 100 x 30, is the famous collection of figs, containing over 80 varieties, all grown in pots. Visitors to the Society's garden are amazed at the quantity of fruit obtained from the trees in small pots, but this is due to the system of feeding adopted, both natural and artificial manure being applied. There is also a range for peaches. There are ten students at present in training, but it is hoped to increase this number to forty as the gardens get more developed.

THE SOCIETY'S TRIALS

The trials which were an important feature of the Society's work at Cheswick, will be continued, with the advantage of a larger area, and an atmosphere untainted by the terrible London fogs which played sad havoc at the former headquarters. Last season there was a large trial of cactus dahlias, to ascertain the best varieties for decorative purposes in the garden. Violas, new and old, were also taken in hand, a considerable portion of them obtaining awards. Border carnations were also tried, but were not a success, owing to heat and drought, but it has been arranged to have another trial this year. Over 180 varieties of potatoes were tested, and about a dozen were commended by the fruit and veg-

etable cutters. Ninety-seven varieties of broccoli were sent in, but this trial will not be complete until May. Seventy varieties of tomatoes were included, but only about six were found first-class. Peas to the number of 149 were tested, and some of these were found to be old friends with a new name. This year there is to be an important trial of tulips, embracing all sections from the earliest to the late flowering. Several of the leading continental raisers will assist the committee, more particularly as regards the nomenclature. Trials are also being arranged for narcissi, asters, cannas, strawberries and cucumbers.

A NEW HORTICULTURAL SOCIETY

Of the making of new horticultural societies there appears to be no end. This month a proposal will be considered for forming a winter-flowering carnation society amongst the growers of this increasingly-popular section. Another new organization has lately been launched under the title of the Horticultural Education Association. Mr. A. E. Brooke, an inspector, and Mr. Walter P. Wright, horticultural superintendent for Kent and editor of "The Gardener," will act as hon. secretary and treasurer. The association will comprise the horticultural instructors now engaged under the various county councils, and it is intended to hold periodical meetings at which papers will be read and discussions conducted on the various phases of gardening instruction. More attention is now being paid in this country to the teaching of rural subjects. The Government grant allotted for technical education has enabled some useful work to be done in this direction. Hitherto there has been no organization to keep the various instructors in touch, and the supplying of this omission is likely to prove beneficial to all concerned.

W. H. Adsett.

London, Eng., Feb. 1, '06.

Primula Stellata.

The star primrose, *Primula stellata*, which is the subject of our frontispiece, was sent to America ten or twelve years ago by Messrs. Sutton of Reading, England. When first introduced it was rather disappointing especially in the color of its flowers. However, since then great improvements have been produced. With good cultivation and selection we have now good-sized flowers and more pleasing shades of color. The white variety of this primrose when well grown, in my estimation, is the best of all the primroses for a cool greenhouse. *Primula stellata* is closely related to the Chinese primrose but it is so far ahead of that primrose in habit and gracefulness that it is hardly fair to compare them together. The star primrose has got rid of the thick-set ungraceful leaves and flower clusters of the Chinese type and has attained long graceful sprays of flowers which are produced in whorls.

The flowers are produced very abundantly, are exceptionally light and graceful and a vigorous plant will bloom from September to April.

The cultivation is the same as is given to the Chinese

primrose. It is easily raised from seed which should be sown in March. By sowing the seeds early nice little plants are obtained before the hot weather sets in and, if kept shifted along, by the end of September they ought to be in six-inch pots and beginning to produce their flower clusters. For a cool conservatory or cool window in the house there are few plants with the exception of *Primula obconica* that will last so long in bloom or give such pleasing effects as this primrose will.

All green house primroses should be grown as cool as possible. In fact all the species that are grown under glass should not have a higher temperature than 45 degrees Fahr., and often we let the temperature go down as low as 40 degrees.

The color of the flowers is very much improved by growing them in a low temperature. Many of the complaints we hear from florists and others of the flowers of primroses being so fugacious are caused, no doubt, from growing the plants in too much heat.

Do not discard the plants of *Primula stellata* as you do the Chinese varieties, as this primrose can be grown a second and third year and make much finer and larger plants than they did the first year. After the plants are through blooming in April cut off the old flower stems and set the plants out in a well-shaded cold frame where they may rest until the end of June when they may be turned out of their pots, the old soil carefully reduced with a sharp pointed stick and then placed in smaller pots. When the pots are full of roots they can be shifted along just in the same way as growing young plants.

Good rough loam with plenty of leaf mould and sheep manure is the compost we use for primroses. When the plants are well established in their pots an occasional application of liquid manure is very beneficial to them.

Robert Cameron

Boronias

These Australian heath-like plants are entitled to be classified with the most elegant flowering plants extant; some of them possess the additional charm of fragrance from their flowers, others from their leaves. Among the latter *B. elatior* is one of the most prominent; the former includes *B. megastigma*, which ranks near the head of deliciously fragrant flowering plants. For chaste floral elegance as a flowering plant *B. heterophylla* has but few successful rivals.

Considering then the above commendable properties possessed by these plants, it is no small wonder that they are so uncommon. They inherit better staying qualities than the general run of heaths, and are less liable to run to glory—or somewhere else—as heaths do at times under the ordinary treatment bestowed on plants as a whole; nevertheless, in order to succeed well with them a little attention on the part of the cultivator will not be amiss.

While fibrous peat as a major part of the potting material is undoubtedly preferable for the more deli-

cate kinds, it is not absolutely necessary as an ingredient to fulfil all requirements. *B. elatior* is one of the most robust and rapid growers of the genus, and most any good soil will suit it, with the requisite porosity of leaf-mould and clean sharp sand. This variety is later in flowering than the other two mentioned above; its season of flowering commences in April, according to the temperature wintered in, and it is good in flower for two or three months at a stretch, a characteristic rarely possessed by other family members, which adds proportionately to its other good traits. The flowers are not large but numerous, rosy-red in color.

B. megastigma is a slender, twiggy plant and might be termed an oddity from a flowering standpoint, the latter possessing no attractive brilliancy, the chief charm being confined to the subtle delightful fragrance exhaled from the flowers. The flowers are broadly campanulate, dark brown without and somewhat yellowish within. One plant of this variety would scent a whole ordinary-sized greenhouse. It is an early winter-flowering kind.

B. heterophylla is unquestionably the jewel of the genus from a floral and decorative aspect; it is also slender and twiggy in habit, the flowers arising from the axilla of the slender, narrow leaves, as in the other varieties mentioned, in great abundance, of a brilliant, rosy-carmine hue, small, inflated at the calyx end of the flower, tapering to a sharp point at the opposite end which seldom ever expands, one of the peculiarities of this variety and one in my opinion that adds greatly to its beauty, this flower appearing like so many uniformly moulded beads stuck on the plant by an artistic hand. This variety is a mid-winter flowering subject, given its proper winter quarters and its own inclination; otherwise of course it can be manipulated to change those inclinations as the cultivator desires.

Speaking of proper quarters, I may add that a cool, airy house suits them best, where a minimum temperature of 40 degrees, and a maximum temperature of 45 at night in winter is maintained.

February and early March is a favorable season for the propagation of boronias as they require considerable time to take root. It is very essential, therefore, that they be well on towards the cullisney stage ere the strong and hot sun of advanced spring be with us; failure, in the latter case, will surely reward our belated efforts. Cuttings should be taken from the tips of the branchlets of a semi-woody texture, and inserted in the usual way in pans or pots of prepared soil, which ought to consist of sand chiefly, with a lesser amount of finely sifted peat or leafmould added. Bell glasses, or similar contrivances, are an acquisition to the successful rooting of hardwooded plants; but I have found it unnecessary with two of the subjects of this note, *B. elatior* and *B. heterophylla* rooting freely in an ordinary bench but with much the same care bestowed on other miscellaneous subjects common to a private establishment.

To procure shapely, bushy plants frequent pinchings have to be resorted to in their infancy, and an annual shearing over after flowering when they have attained manhood stages, at which period greater vigor and progress are made by annual planting out in mellow enriched soil.

Nicotiana Sanderae
in winter

A correspondent of the Gardeners' Chronicle, writing from Canada, recommends *Nicotiana Sanderae* as a pot plant for conservatory decoration. He might safely go further and approve it as a window plant for the ordinary dwelling house. We have in mind a specimen which was dug from the border last fall, potted and taken into the house, having at that time shown no evidence of blooming, which is at present writing a bright attraction in the window, with every promise of so continuing until the end of the season.

Two varieties
of hybridizers

Another rhapsodist—a professor this time—lecturing in New York, breaks out in swelling laudation of the plant “creators.” What with the “professors” and rudimentary biologists and the “wizards” who change species by tramping on them or some similar process—as witness the man in Michigan who metamorphosed a celery plant—the plain everyday hybridizer who really does things, doesn't count. Perhaps it is as well that the shouters should occupy the front of the stage, for the public has no particular interest in the slow, painstaking work by which our hybridizers are accomplishing real advancement.

The rose show
will be a notable event

The approaching exhibition of roses at Boston furnishes a favorable opportunity to impress upon our readers the great advantages to be gained by a visit under such circumstances to such a centre of advanced horticulture as Boston is recognized to be. Frequent trips to see the products of brother cultivators, to observe the methods, study the management, and learn the ways of those engaged in a calling similar to our own furnish a stimulant as well as a relaxation and the additional advantages of meeting face to face and conversing on topics of vital importance to our prosperity, with men of eminent attainments, something the value of which cannot be overestimated. In all these respects the coming affair at Boston is a distinct pre-eminence.

It will be an occasion that no enterprising and ambitious man can afford to miss. In many ways it will be the opportunity of a life time.

The return
to nature

Are our so-called varietal improvements really improvements? After having worked zealously along one line until we have reached the limit of development in that direction how often it turns out that we are forced to confess an unalloyed beauty in the despised original from which we made our start in “improving.” The graceful subject of our frontispiece in this issue, reputed to be the ancestor of our richly developed Chinese primroses is a case in point. Turning away from the pampered pets of our highly developed strains who can help but fall in love with its natural simplicity of outline and poise? After a surfeit of the Timothy Eatons and Col. Appletons, chrysanthemums of the single types come as a refreshing change and the once spurned single roses and single dahlias are given a place of honor in our gardens and our exhibitions.

Forcing
the lilac

The article on lilac forcing, contributed by a French grower, which appears in this issue, should be of great interest to American forcers, many of whom have had but indifferent success in forcing good flowers on this popular favorite. An intimation of the remarkable future in store for this branch of floricultural industry in this country is given in the extent to which it is carried on abroad, there being individual forcers who handle for the Paris market from fifty to one hundred and twenty-five thousand plants each of *De Marley* alone. The flowers are very popular in Paris; pot-grown plants are used much less extensively. Even Charles X. and Marie Legraye are forced more from field-grown stock than from pot-grown. Properly grown the flowers are excellent keepers and it only remains for our growers to put them on the market in such shape and quantity as to make them a staple the season through.

Vicissitudes
of the novelty list

From the earliest horticultural literature down to the present time the ceaseless quest for new things has been going on and novelty has not infrequently superseded sterling merit. Generations back we find recorded the same spirit of jubilation over the marvelous improvements in varieties of the period which is so familiar to us of the present day. What matters it that of all the bepraised introductions of by-gone days scarcely one out of a whole year's novelty list is extant? What matters it that of the vaunted triumphs of today the great majority are doomed to disappear from the lists long before some of the readers of these lines have passed on? Other favorites will fill their place only to be superseded also in due time. This phase of the horticulturist's existence will always be, as it has been, the zest, the heart and soul of his art, and all the rules and by-laws that any society may enact to protect the profession against itself will go for naught against the universal propensity to experiment and take a chance. Let us not lose sight of the fact that a large proportion of the permanently good things in our standard list got there regardless of certificates, that some of the discarded things have met their fate in spite of certificates and medals and that, in all probability, history will continue to repeat itself.

WHOLESOME CHESTNUTS.

Begin to save manure for hot beds, if you have not greenhouses enough. Leaves mixed with the manure do pretty well.

Start in time with preventives for mildew. Sulphur is about the best thing to use; either dust it over the damp pipes or paint the pipes with it.

Many kinds of seeds ought to be sown now; among them, lobelia, salvia, dianthus in variety, including Marguerite carnations, alyssum and verberna.

Do not for a moment let up on cuttings. Take them off as fast as they appear fit and put them in. There is no time like the present. This is especially applicable to the propagation of nearly all kinds of bedding plants.

Finish tying peaches and nectarines if the mild weather started them. Be careful to put on all the air possible in the day time, but take no chances nights; you may even have to give them a little heat earlier than you thought you would.

If hollyhocks have been in flats the greater part of the winter they must be growing into one another now; if so lift every other one out by way of thinning, put them either in flats or put them in small pots, or still better a little later on plant them in cold frames.

As the season advances growth advances with it indoors as well as out. Repotting will be in order. Use good material; avoid anything that is likely to sour; use clean pots, clean outside and inside; clean crocks, you can keep the crocks sweet and clean, too, if over them you put either a little sphagnum or a piece of tough sod.

If gardenias intended for summer flowering have not yet been planted do not delay any longer. In removing the old gardenia plants, if some of them are extra fine—of the pity-to-throw-away kind—put a few of them in large pots. No doubt you will get quite a few flowers from them, and sometimes nice plants in flower are used, plants, flower and all, for decorations.

Start grape vines cool at first in order not to unduly excite the vines. After they are started syringe the vines several times a day and keep the house moderately moist, but be careful not to overwater at the roots; they do not require a great deal of water until they are about breaking. However, when water is applied to grape vine roots it should be thorough, so much so that every root gets an equal share of water.

If benches are to be replanted with American Beauty roses for midsummer flowering begin to get things in order for them. The first consideration is to get good, clean, healthy stock in at least 3 1/2 inch pots. Even if good stock costs a trifle more don't hesitate but get the best. When the time for flowers comes around it will be but small consolation to know you saved a cent or two on each plant if no flowers of any consequence are forthcoming.

With the next issue of HORTICULTURE we shall present our subscribers with another in the series of beautiful colored plates, the subject being the sweet pea novelty of 1906 Henry Eckford.

ADIANTUM CUNEATUM.

Adiantum cuneatum is not generally regarded as a good subject for living-room culture. The specimen illustrated herewith has been in possession of a lady for ten years during which time it has been constantly in the dwelling house. It measures over 15 ft. in cir-

cumference and 37 inches in height. The health of the plant is evident in the picture. An example like this demonstrates the possibilities with this fern and justifies the florist in recommending it as a good subject for dwelling house culture when properly cared for.

MARECHAL NIEL.

Mr. Editor:

Could you spare space enough in your valued HORTICULTURE to get, or ask the opinion of its readers, as to the proper treatment to be given a four-year-old Marechal Niel rose bush; as to whether it should be dried off or slightly chilled, and about how to prune it to get it to flower properly.

This information would be of considerable value to me and will be thankfully appreciated.

Respectfully,

F. B.

If the Marechal Niel rose has made good growth, water should be gradually withheld and plenty of air given so that it may get thoroughly ripened, as on this depends not only the amount of flowers but the quality also. All the pruning required will be to cut back the long growths to firm wood; then tie them in to the trellis, making sure to give them a good bend to induce them to break back, otherwise the flowers will all be at the tips. The starting up does not differ materially from that given to a Hamburg grapevine, except that the temperature should be a little lower.

ALEX. MONTGOMERY.

PUBLICATIONS RECEIVED.

A Manual of the Phlox. By C. S. Harrison, York, Neb. Full of the enthusiasm the author puts into all his work and well worth the price, 25 cents.

Leaflet No. 8 of the American Civic Association, Department of Nuisances, tells about mosquitos and how to abate them. Frederick Law Olmsted, Jr., and Henry Clay Weeks are the authors. The mosquito problem once solved, country life will become a paradise.

OBITUARY.

John E. Barry.

On the 10th day of February, at the home of his sister, Mrs. Patrick Donovan, in Roxbury, Mass., occurred the death of Mr. John Barry, for twenty years an employe of Mr. W. E. Doyle. Mr. Barry was born in Boston 32 years ago, and was the son of the late Edward Barry and his wife, nee Mary Anna Joyce. He was educated in the public schools of his native city, and while at school gave promise of a bright and prosperous future. In both his private and business life afterwards John Barry redeemed the promise of his youth. He was a modest man, who incorporated his religious belief in his practical living. Bright of mind, artistic in trade, unflinching in industry, loyal and scrupulously honest toward his employer and just toward all men, Mr. Barry has made for himself a brilliant record, and created for those around him and for all who in any way felt the touch of his beautiful life a noble economic and Christian ideal.

Mr. Barry's death was caused by heart weakness, which came upon him swiftly and is a distinct and emphatic loss to the florist world, whose patrons, particularly amongst the highest grade of patronage, so deeply esteemed the aristocratic blending of fine and gentle courtesy found in young Mr. Barry. The obsequies were solemnized on Feb. 13th in St. Joseph's Church, Roxbury. At the solemn Mass of Requiem Rev. Father Fahey was celebrant; Rev. Father Sullivan was dean; Rev. Father Ring, sub-deacon, and Rev. Henry A. Barry, D. D., a relative of the deceased, was master of ceremonies. The unusually large and tearful assemblage of mourners from the various walks of life, particularly from the florist world, gave silent but certain evidence that a bright, beautiful and valuable life had been brought to a close, and that the ashes of a true son, of a devoted brother, of a faithful employe and of a staunch friend were being consigned to the grave. Eternal rest be his!

Charles R. Emslie.

Charles R. Emslie, brother of Alexander Emslie, died at his home in Berlin, Vt., of tuberculosis, on Monday, Feb. 6. Mr. Emslie was born in Aberdeen, Scotland, June 14, 1869, but has been in this country for ten years, six of which have been spent in the employ of his brother. He leaves a wife and child. He was a prominent member of the Burns Club and of Clan Gordon of Barre.

Benjamin P. Ware.

Benjamin P. Ware of Clifton, Mass., died at the Massachusetts Homoeopathic Hospital in Boston on Feb. 7, aged 83 years. He was an active participant in Massachusetts Horticultural Society politics for many years.

As we go to press we receive the news, without details, of the death of the mother of Robert Craig.

NEWS OF THE CLUBS AND SOCIETIES.

NEW YORK FLORISTS' CLUB.

The meeting of the New York Florists' Club on Monday evening, Feb. 12, was a tremendous one, the attendance reaching the unprecedented number of 110, the hall being packed almost to suffocation with the crowd and the extensive exhibits. C. W. Ward gave an eloquent talk on carnations with illustrations, and was followed by Robert Craig and F. R. Pierson, both of whom also talked entertainingly.

The outing committee reported that Wetzel's Grove had been chosen for the club picnic, which will come off on July 2. Messrs. Nugent, Kessler and Shaw were appointed a committee to present resolutions on the death of the father of the vice-president. W. F. Sheridan was appointed in place of John N. May resigned, on the legislative committee. A motion to inaugurate a system of cash prizes for exhibits at the meetings was laid on the table. Ten new members were elected and twelve more nominated.

The exhibition comprised some splendid groups of carnations from noted growers. The prizes for 25 blooms of four varieties were awarded as follows:

First, C. W. Ward; second, F. R. Pierson Company; third, Valley Farm Greenhouses. C. W. Ward's vase of Alma Ward was declared the best in the exhibition. For preliminary certificate this variety scored 94 points, and Elsa Struss was given 90 points.

Among the other exhibits staged were Winsome, Harry Fenn, Seedling 32, Variegated Lawson and Fiancee from John Reimels; Red Lawson, Winsor, and White Enchantress from F. R. Pierson Company; Enchantress, Lady Bountiful, Mrs. Patten, and Nelson Fisher from Velie Bros.; Abundance and freesias from R. Fischer; seedling from E. L. Enggren; Jessica and My Maryland from H. Weber & Sons; Victory from Guttman & Weber; Robert Craig and Enchantress from Cottage Gardens. Glendale from W. J. Vesey did not arrive in good condition.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of this society, held on Feb. 12, an address was given by Thomas White of Fairhaven upon the subject, "What is a bulb, a corm, a tuber, a rhizome?" The speaker deprecated the custom of calling all these things by the common name of bulbs; explained and illustrated the difference in their structure and habits of growth; also strongly recommended the application of the adage, "Why not call a spade a spade" in matters pertaining to horticulture as well as in things uncouth or questionable. An interesting discussion followed the address.

The entertainment committee reported that arrangements were being made for lectures upon the gypsy and brown tail moths, and upon bulb growing in Holland. The executive committee reported the presentation of several cups by interested friends of the society for competition at the annual fall show.

H. August Jahn showed a splendid vase of seedling pinks; the individual flowers were exceedingly fine and ranged in color from white to dark red.

THE S. A. F. PAEONY COMMITTEE.

The S. A. F. paeony committee files the following list of varieties under trial under the auspices of the Department of Agriculture at Washington. Peter Bisset, who is the active local member of the committee at Washington, also has installed a collection at Twin Oaks and is making annual records therefrom. The following list of the Department of Agriculture set contains 76 varieties and more are to be added:

Maria Kelway	Whitley plena
Agnes Mary Kelway	Prince Prosper
Lady Curzon	Lady Carrington
Princess Beatrice	Sir T. J. Lipton
Mrs. Chamberlain	Princess May
Mountbank	Queen Victoria
Festiva Maxima	Miss Salway
Princess Irene	Bunch of Perfume
Duke of Clarence	Milais
Lady Beresford	Tinted Venus
Limosel	Miss Brice
Paderewski	Nominate
Mad. Calot	Calliphon
Torquemada	Duke of Devonshire
Glory of Somerset	Baroness Schroeder
Prince of Wales	The Bride
Leonard Kelway	Ella Christine Kelway
Dorothy Welsh	Cyclops
Alonzo	Sainfoin
Grizzell Muir	Venus
Solfaterra	Duchess of Sutherland
Lottie Collins	Mr. Manning
Kelway's Queen	Queen of the May
Helena	Lady Cecilia Rose
Joan Seaton	Viscount Cross
Princess Christian	Lyde
Princess of Wales	Water Lily
Lady Gwendolen Cecil	Princess Dhuleep Sing
Mrs. Asquith	Cendrillon
Stanley	Alton Locke
Prince George	Argus
Cognita	Hesperus
Duchess of Teck	Amiable
Autumnus	Lady Bramwell
Humei White	Cavalleria Rusticana
Summer Day	Emily
Moonbeam	Clothes
Reine des Francaises	Opiter

MASSACHUSETTS HORTICULTURAL SOCIETY.

The program of exhibitions during the season of 1906 is as follows:

March 23-25—Annual spring show in connection with the American Rose Society's exhibition.

May 5—Plants, flowers and vegetables.

June 2—Rhododendron exhibition. Shrubs, hardy herbaceous flowers, orchids, vegetables.

June—A Paeony exhibition and a Rose and Strawberry exhibition, dates to be announced.

July 7—Flowers, fruits and vegetables.

July 21—Sweet peas, aquatics, fruits, vegetables.

August 4—Phloxes, annuals, fruits and vegetables.

August 18—Gladioli, China asters, fruits and vegetables.

September 5-6—Annual exhibition of plants and flowers.

October 10-11—Annual exhibition of fruits and vegetables.

Nov. 2-4—Chrysanthemum show.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

At the last meeting of the society, on Tuesday, Feb. 6, an interesting paper on "Rose Culture" was read by James MacGregor, grower to F. S. Platt Co.

PITTSBURG AND ALLEGHANY FLORISTS' AND GARDENERS' CLUB.

At the meeting of the club Tuesday evening, Feb. 6, officers were elected as follows: Jno. W. Jones, president; E. C. Reineman, vice-president; F. Burki, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; P. S. Randolph, Jno. Bader, F. Burki, executive committee, being with the exception of the president the same officers who have conducted the affairs of the club for several years. Mr. Jones has been for many years the foreman of the Schenly Park greenhouses, and in this capacity has been widely and favorably known among florists and gardeners, and the people of Pittsburgh who visit the Schenly Park greenhouses owe much to him. He will make a good practical president. While heartily welcoming the new president the club remembers with deep gratitude the services of the retiring president, Mr. Langhans, whose work for the welfare of the club has been faithful and unremitting.

The secretary's report showed a membership of 153, with 26 accessions for the year 1905, and a larger balance in bank than ever before.

It being Carnation Night there were good exhibits from home and distant growers. One member who attended the recent Carnation Convention in Boston and visited many of the growers in the vicinity stated as a curious fact that, in Massachusetts, the home of the famous Lawson carnation, it is not now grown as well as our Pittsburg growers are doing it. Better Lawson carnations now come into the Pittsburg market than into Boston. On the other hand, Lady Bountiful, while it does very well with us, seems to be in perfection with the Boston growers.

The Jno. E. Haines carnation was shown in good form, making its third season before the club. A committee appointed to pass upon it, consisting of Messrs. F. Burki, P. S. Randolph and C. S. Crall, voiced the prevalent sentiment when they reported it as the finest flower of its color, considering finish, stem and commercial effect, that has been exhibited at our meetings.

Victory was shown in good form and style, and the comment was exceedingly favorable. W. J. & M. S. Vesey showed through J. B. Murdoch & Co. Glendale in fine form. This drew the most favorable comment of any variegated carnation shown, but carnations of the variegated type have never been good sellers in Pittsburg.

J. L. Wyland, De Haven, Pa., showed Fiancee a good flower and pleasing color, but bursts too much; Eclipse, early, free, and a good stem; also Fred Burki, Lady Bountiful, Enchantress and Lawson.

The Pittsburg Rose and Carnation Co. showed among others Flamingo, which does well with them, also Estelle, Fred Burki and Lady Bountiful, and some good seedlings.

The Blind Bros. showed Lawson. The Pittsburg Florist Exchange staged white and pink Lawson, Mrs. Patten, Nilson, Enchantress and Pros-

perity. S. J. Hatch showed a vase of Lawson, Enchantress and Lady Bountiful and fine primulas in pots.

It was voted the meeting of the club in March should be a Rose Night.

H. P. JOSLIN.

CINCINNATI FLORISTS' SOCIETY.

If it had not been for the out-of-town growers the exhibition given by the Cincinnati Florists' Society Feb. 10 would have been a failure. Roses are off crop here and a week of zero weather made matters worse. The stock exhibited was good, but we have had better shows both in quantity and quality of flowers. However, the variety displayed made up for the deficiency. The show was well advertised by the daily press, but the inclemency of the weather prevented a large public attendance. Judges Schwarz and Critchell made the following awards:

American Beauty, 1st, Peter Reinberg; 2nd, Weiland & Olinger. Bride, 1st, Gus Meiers; 2nd, Weiland & Olinger; 3rd, Peter Reinberg. Bridesmaid, same as Bride. Ivory and Meteor, 1st, Peter Reinberg. Best vase of roses any other variety, 1st, Peter Reinberg; 2nd, Weiland & Olinger (both with Chatenay). Miss Kate Moulton is the name given to a new seedling rose exhibited by the Minneapolis Floral Co. It scored 90 points. The rose is on the order of the Chatenay and is borne on a good stiff stem. It was by far the most beautiful vase of roses in the building. Witterstaetter had a vase of his new carnation, The Aristocrat, which was greatly admired. This flower has had considerable free advertising in the local papers and therefore proved to be a good drawing card. The next exhibit will be the carnation show, which will take place on Saturday, March 10.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

A. C. Zvolanek, Bound Brook, N. J., submits for registration the following named new Christmas blooming sweet peas:

Mrs. Alex. Wallace, seedling from Florence Denzer x Lady Hamilton; lavender.

J. K. Allen, spotted pink on white ground.

Christmas Enchantress, soft pink.

Jack Hunter, yellow, black seeded.

Mrs. C. Wild, Zvolanek's Christmas x Salopian; carmine.

Christmas Meteor, scarlet.

W. J. STEWART, Secretary.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next meeting of the club will be held at Horticultural Hall, Boston, on Tuesday evening, Feb. 20, at 8 o'clock. The lecturer of the evening will be Robert Cameron of the Harvard Botanic Gardens, on his recent tour through the West Indies. Some very choice and interesting exhibits are promised, which alone will be worth coming to see. Applications for membership are still coming in, and it looks like 300 members before May 1. There will be music, refreshments and other attractions as usual.

FLORISTS' CLUB OF WASHINGTON.

The Florists' Club of Washington held its regular monthly meeting on February 6. It was decided, after discussion, that the first Tuesday in March, the occasion for the regular annual election of club officers, the organization shall tender a banquet to the incoming officials. The banquet will be held at Freund's. The arrangements were left in the hands of a committee appointed for the purpose.

The feature of the meeting, aside from the exhibition of carnations, was a lecture by Mr. Elmer C. Wood of the Department of Agriculture on the carnation and the diseases to which it is subject. Mr. Wood illustrated his descriptive address with stereopticon slides, showing the manner in which the wet and dry rot can be prevented, detected and cured.

James T. Scott, of the F. R. Pierston Co., made a brief but highly appreciated speech, discussing the certification of meritorious varieties of the carnation and the unscrupulous methods of some dealers in trying to put out unworthy sorts.

In the report of the committee on awards, Imperial scored 74 points, Pink Imperial 85 points, John E. Haines 85 points, Robert Craig 86 points and Glendale 80 points. My Maryland, Jessica, Beacon, Evangeline, Helen Gould, White Enchantress and Winsor if shown as well at two more meetings of this club will be each entitled to a certificate. Certificates were awarded to S. C. Briggs for superior culture of rose Killarney and carnation Enchantress, Ley & Bickings for exhibit of carnations and Mrs. G. G. Hubbard for superior culture of rose Killarney. Mikado, Pink Patten and Abundance carnations were also on exhibition.

ST. LOUIS FLORISTS' CLUB.

The St. Louis Florists Club's carnation meeting was held Thursday, Feb. 8, with a good attendance. The exhibits which took prizes were as follows: Twenty-five red, 1st, W. J. & M. S. Vesey, Red Sport of Glendale; 2d, Theo. Klockenkemper, Flamingo. Twenty-five white, 1st, H. Weber & Sons Co., My Maryland; 2d, W. J. & M. S. Vesey, Lady Bountiful. Twenty-five light pink, 1st, Wm. Winter, Enchantress; 2d, D. C. Noble, Light Pink Lawson. Twenty-five dark pink, 1st, W. J. & M. S. Vesey, Lawson; 2d, J. F. Ammann, Lawson. Twenty-five variegated, 1st, Wm. Winter, Patten; 2d, H. Weber & Sons Co., Jessica.

The Indianapolis Floral Co. exhibited a nice vase of Candace; John Steidle a sport of Enchantress, the color darker than Enchantress; the Minneapolis Floral Co. a vase of the new rose Miss Kate Moulton, which was awarded certificate of merit; W. J. & M. S. Vesey sent a vase of sweet peas, which received honorable mention.

The judges were E. W. Guy, Max Herzog, F. H. Ude, Jr.

It was decided to make the next club meeting, March 8, a rose meeting, the club to offer five dollars for 1st and three dollars for 2d best 25 white, 25 pink, 25 red and 25 any other color. The trustees will take charge of all flowers sent, the same as for the carnation meeting.

SOCIETY OF FRENCH GARDENERS IN LONDON.

At the annual dinner of this society which was held at the Cafe Royal, London, on January 6th, there was quite a group of international horticulturists both amateur and professional—English, French, Belgian, Japanese, and we know not how many more besides. America was represented for the first time, Mr. William Duckham of Madison, N. J., being among the guests.

The toasts were: The President of the French Republic, the King, La Societe Francaise d'Horticulture de Londres, Our English Friends and Supporters, the Bureau of the Society and the English Horticultural Press. The chair was taken by Mr. John Harrison of Leicester, and the speakers were Mr. George Schneider, Mr. Harman Payne, Mr. Thomas Bevan, Mr. Verboonen, Mr. B. Wynne.

This was the 17th anniversary. The proceedings were partly in French and partly in English, it being a not uncommon thing for some of the Frenchmen to speak English and some of the English speakers to do their part in French at these very interesting gatherings.

PASADENA GARDENERS' ASSOCIATION.

At the meeting on February 2, plans were completed for a three days' flower show on April 5, 6 and 7. Messrs. Hanson, Blake and Thompson afterward waited on the Board of Trade and secured their hearty endorsement and promise of assistance. It is planned to hold the show in the Y. M. C. A. auditorium. At this season the flowers will be at their best, and it is anticipated that such an exhibition will be a strong force in promoting an interest in horticulture throughout Southern California.

STATE FLORISTS' ASSOCIATION OF INDIANA.

The regular meeting was held on Feb. 6 at the State House at Indianapolis. The chief business of the evening was in regard to holding a spring show, and after some discussion Messrs. A. F. J. Baur, H. W. Rieman and George Wiegand were appointed a committee to arrange for a show in April. J. E. A. Haugh of Anderson was present and addressed the meeting.

CLEVELAND FLORISTS' CLUB.

The last regular meeting was held on Monday evening, February 12. A general discussion was held regarding a carnation show and it was finally decided to hold one on February 26 at 8 P. M.

CLUB AND SOCIETY NOTES.

The twelfth annual ball of the Lenox Horticultural Society was given on the evening of February 6, in the Town Hall, which was handsomely decorated with palms, potted plants and greens for the occasion.

The Kentucky Society of Florists held its regular meeting at Joseph Wettle's home Tuesday night. It was decided that on Wednesday, Feb. 21, they hold an exhibition of carnations and roses. Anyone having anything of interest to exhibit should send same to Secretary Fred L. Schulz. This year the public will be given an opportunity to see the show.

IMPRESSIONS OF THE BOSTON MEETING OF THE AMERICAN CARNATION SOCIETY.

(Paper by Albert M. Herr Before the Florists' Club of Philadelphia, February 6th, 1906.)

When the meeting of the American Carnation Society is mentioned the first thought and the first question is "how was the exhibition?" In view of this fact the exhibition will receive our first consideration.

The entries for this exhibition eclipsed all previous efforts in the exhibition line and had not Dame Nature freaked off into a week of May weather, just preceding the meeting, there would have been half again as many carnations staged in Boston as ever were previously staged at one time or place in the world.

Accustomed as this society is to a blizzard as part of its programme for the week, it seemed doubly unusual to see exhibitors throw flowers aside because they had heated in transit, and to hear others say "we did not care to risk our flowers for travelling in such soft weather," yet such were the facts in the case and fully 20,000 flowers were not staged that would have been under more favorable conditions.

In spite of all these drawbacks the show in a small measure eclipsed in quantity all previous shows, but the continued warm weather of January brought the quality of the blooms below their normal average for this season of the year, and with the exception of the improvement in the newer varieties over the older sorts, the standard of the flowers shown was not as high as in some former shows. Had not the hall been almost ideal for the keeping of carnations this would have been more noticeable, but even with these soft flowers the exhibition was better the second day than any exhibition this society has ever held and the sleepy, sick-looking vases usually in evidence the second day were conspicuous by their absence.

In the contest for certificate of merit, only two scored up to the point of award; these were F. R. Pierson Company's Winsor and John Reimels' Winsome, both of them a beautiful pink color, a color we stand very much in need of, as we are running low on profitable varieties in this shade. It is to be hoped they show up as well on the benches of the men who buy them as they did on the exhibition tables. Those varieties that did not score high enough for a certificate are not of necessity inferior sorts, as here again the weather was to blame and many of those entered were too soft to be done full justice by the judges, who had to judge from what they had before them.

In the Lawson Medal class the gold medal went to C. W. Ward with the variety Elsa Struss, another one of the pink shades we are looking for. The color of this variety scored high by daylight and would have scored higher under the electric light as it certainly did light up handsomely. The silver medal went to Pierson's Winsor, another feather in its cap. The bronze medal to C. W. Ward's Robert Craig; this one will soon need another cap to hold all of its feathers.

To mention all of the new named and numbered sorts, that were up for exhibition only, would simply mean

confusion, but several of them were so striking as to demand recognition in a paper of this sort, the first of these being Rob Roy, exhibited by the Dailedouze Bros.; it is a phenomenally large white, that is destined to make a sensation if ever it is put on the market. Another one in this class was a bright yellow so distinct as to be the first variety to catch your eye in looking over the hall; its fine color and fine stem will no doubt make it some day a standard yellow.

Still another was Peter Fisher's Evangeline, in color a rather dull salmon, but fine in form, substance and stem. A Boston retailer whispered in confidence that the color was just what the people want; under electric light it is a handsome thing, but in daylight I would not be one of the people. His Beacon looks like a winner in the scarlet class, and if any or all of the three scarlets now being introduced fall into the same grave as Fiancee we will have this one for future trial. Patten & Company's Mikado is a fancy flower for a fancy trade and one well worth a trial.

S. J. Goddard's Helen Goddard jumped into favor at once with the most of us as a successor to William Scott and Joost. There were a host of other good ones on exhibition, but all of this has been chronicled in the trade papers, and it would simply make you tired to hear them all over again.

In the standard sorts among the whites Lady Bountiful led all of the others and it well merits this lead. Enchantress was almost one-third of the show; in fact, for the sake of the general effect of the exhibition there were too many of the lighter colors. Lawson was not so much in evidence as in former years and the best one hundred blooms in this class was awarded to Peter Fisher with the variety Nelson Fisher.

In the Scott shade of pink class there was practically nothing doing, and Fiancee, the queen of our last year's exhibition, was conspicuous by its absence, and we will have to look to the present season's introductions to fill the gap in this class. The same is true of scarlets, there being nothing striking to show excepting this season's introductions and apparently they are all good. In crimsons, Ward and Dailedouze can grow the President and Crimson Glow and make money from them in the New York market; other cities draw the line at Harry Fenn and do not want too many of them. Yellow variegated has found no successor to Buttercup and Buttercup is too old to travel to the exhibition if it is not defunct entirely. Eldorado was the only variety in this class. In white variegated M. A. Patten and Variegated Lawson had the field to themselves. Lawson cranks claim there is nothing like the Lawson and they are not far wrong, no matter whether it is a white, variegated, light pink, dark pink or any other color. In this latter class Prosperity and Mikado had the field to themselves.

The arrangements for staging the flowers quickly and without confusion were well made and the coffee and sandwich feature in the hall as a preliminary to Boston hospitality was certainly appreciated by these hard

workers, who had until 1 p. m. to stage their flowers. The rearrangement for effect after they had all been staged in class made things very confusing for the judges and delayed the work fully half an hour. Six judges worked on this exhibition for almost three hours and they did not waste any time.

As to the business meetings they are worth more consideration than most of the members give them. There were several innovations made that will no doubt be record markers for Boston. The principal one of these is the fact that in the future certificates of merit will be given only after a variety has scored up to the proper figure on the exhibition table and again scored by a committee of three under a scale of points yet to be adopted and adapted to the scoring of the variety in the greenhouses of the originator. It was also proposed that the growers of new varieties for introduction should keep a record of the number of blooms cut per square foot of the variety and the price it brings in their market and publish these records at intervals during the season. By this double method of checking up a new variety this society hopes to avoid the introduction of failures, as it deeply deplores the loss of time, money and space through the failure of so many of the newer introductions.

The papers read were all valuable in their respective lines, but the discussion on them was so meager that it came pretty near being nothing at all. The attendance at the opening meeting in the evening filled the large hall we had for a meeting room, the next day it dropped off about 90 per cent., the show holding about the half of these and the other half were sight-seeing either in the city or among the surrounding growers. This loss of attendance could be partially overcome if the growers were to arrange a program of visiting for the first day, returning the party about 4.30 p. m., the hall always being closed from 1.30 to about 4.30 for judging. Another program could be arranged for Friday, this visiting of the growers being a legitimate part of the session which should be arranged so as not to conflict with the business sessions.

One very vivid impression of this Boston meeting will be the nearness with which we came to losing the special railroad rate of a fare and one-third. Our attendance by rail at these meetings is so close to the hundred mark required that every one who attends should buy a ticket on the certificate plan; it is very little trouble and means the saving of a lot of money to some of us. Philadelphia and New York were the chief sinners at this meeting.

Another impression to the visitor was the lack of a registration book and a place for the proper receipt of mail and telegrams; this was no doubt simply an oversight of the local club and the President, through whom such affairs are arranged.

The banquet was a royal finish to a very profitable and enjoyable meeting, and the few disappointments always an incident of such meetings are soon forgotten in the memory of the host of pleasant ones, and we are now all looking forward to the next meeting in Toronto for 1907.

One word about this Toronto meeting. It ought to be a rousing meeting and a good exhibition. Toronto is easily reached from both the east and the west and our President-elect is the sort of a man who will leave nothing undone that will add to the pleasure and profit of the members attending this meeting. He has already secured the transportation of all cut flowers for the exhibition through the customs free of duty and without the delay usual in such cases. If there is no other reason for coming the mere fact that you will meet President-elect John H. Dunlop of Toronto, Ont., is an all sufficient one.

MIGNONETTE.

Abstract from a paper read before the Tarrytown Horticultural Society by Joseph Bradley.

The kind of house to grow mignonette in is in my opinion a house such as is commonly used to grow violets in, with the benches somewhat further from the glass. They should be from two to three feet according to the variety you intend to grow. The nearer to the glass the better, providing there is head room to keep it straight. The house should be so constructed that both side and top air can be given as it likes abundance of air.

Solid benches should be used where it is possible, as there is not so much danger of the bottom roots becoming dry, which is very injurious to mignonette. If solid benches are used the soil should be removed about ten inches deep and filled with three-quarter loam to one-quarter manure, with good sprinkling of air slaked lime. If shallow benches are used they should be six inches deep at the least and if boards are used at the bottom they should be far enough apart to allow good drainage.

Mignonette should be sown where it is expected to bloom without transplanting it. After lines have been drawn, say twelve inches apart crossways and ten inches lengthway, then place three of four seeds at each place where the lines cross each other. When the plants are one inch high they should be taken out leaving one in each place. After the plants have attained a height of four inches they should have the top pinched out to cause them to make side shoots. If you wish very large spikes then only four or five, but very nice spikes can be had if eight or nine shoots are left to grow.

It is very necessary to keep them tied in straight, and there are several ways of doing this. One is just to place a stake in the middle of the plant and run a string around. Some use carnation stakes, some also run wires lengthways of the bed and strings crossways the same as some carnation growers do, and I think this way the best; it keeps them upright without crowding.

If you wish to cut mignonette for the holidays the seed should be sown by the middle of August. All the air should be left on the house night and day until near frost. But after it is closed I like to have it from 47 to 50 degrees with as much air as it is possible to give at all times. I know that some growers advocate from 40 to 45 degrees but in my opinion this is too dead, especially so after the

month of January when we get more sun.

After the spikes have begun to form they should have liquid manure about once every ten days. I find horse manure suits it first-class. Also nitrate of soda about three barrels to fifty gallons of water. After the first crop has been cut, if proper attention is given to pinching and feeding, good cutting can be kept up until June. I think it a mistake to throw it out after the first crop has been cut; the spikes are not quite so large but you get a great deal more of them and they come much quicker. The best variety that I know of is Her Majesty. It is rather tall but it gives good satisfaction.

The greatest pest on mignonette is the common cabbage worm or the larvæ of the yellow butterfly and if this pest is not kept in check he will soon eat up all the plants. I find paris green very good in exterminating it, but it must be used not too strong or it will burn the plants. It ought to be mixed in water and put on with a fine spray, just enough paris green in the water to color it. Salt can also be used dissolved in water; while hellebore, slug shot, pyrethrum power, tobacco dust can also be used dusted on the plants. But the best way is to keep the butterfly out of the house by placing mosquito netting over the ventilators or by building a light frame work over the bed and covering it with netting. The earthworms also become troublesome in the solid benches if lime water is not used from time to time.

After the first crop has been cut and the plants are making new growth they will require abundance of water and a good top dressing of well rotted cow manure will help them a great deal, but the liquid manure should be used as before. The spikes will be greatly improved if cut twenty-four hours and placed in a cool house before using them.

CALIFORNIA NOTES.

French and Belgian growers should take more care in the packing of flowering stock imported by California nurserymen. If such stock as azaleas and rhododendrons were more generally of some value when opened here the importations by California nurserymen from European nurserymen would be considerably increased.

The president of the National Gardeners' Association, John M. Hunter of New York, is touring California with the object of finding a location for a national gardeners' home, which it is intended to establish in this state. On the 4th inst. he was shown the beauties of Golden Gate Park by Superintendent McLaren, and he pronounced it from an expert's point of view one of the most beautiful parks in the world and the most beautiful in America.

Warm, growing weather has followed all this passing week the incessant rainfall of the cold, preceding week, and crops and vegetation of all descriptions are materially improved. Almond buds have commenced to swell and willow and elderberry leaves are coming out. Orchards and vineyards are in good condition, and cultivation and pruning are progressing. The damage by frosts this season has been comparatively light and the outlook is good for large crops of deciduous

fruits and grapes. Citrus fruit trees have been greatly benefited by the recent warm weather.

Relatives and friends of Luther Burbank issued a circular this week calling attention to the annoyance to which he is subjected almost daily, and requesting the discontinuance of visits by the public; they also placed on each gate at his residence a notice declaring that anyone entering or trespassing on the grounds will be prosecuted. John M. Rutland of Melbourne, who is here visiting the trade, has secured this week the exclusive right to handle and distribute in Australia and the eastern portion of the world, including Africa, Luther Burbank's thornless cactus, new grape, and several species of new plums.

Fruit growers of California are feeling much better than they have. Rates on fruit shipments are to be lowered and rebates positively abolished. A prominent grower said: "Speed and direct carriage to the Eastern market are vital to the fruit industry of California." And W. E. Gerber, president of the Earl Fruit Company, said: "This decision of the transportation lines will be a great thing for the fruit industry of the state. It means a reduction of 15 per cent. in the cost of the refrigeration of fruits shipped to Eastern points, and to that extent will the fruit growers of the state receive the benefit. Judging by last year's shipments, which amounted to 7000 cars, the net gain to the fruit growers of the state by the reduction agreed upon will be fully \$100,000."

Warm and clear weather prevailed throughout the state most of the week, with considerable cloudiness at the close and light rain in the central and southern sections on the 4th and 5th inst. This warm weather is being very beneficial to grain, which is now in excellent condition and making rapid growth, with indications of a large crop in all sections. Plowing and seeding are in progress in many places and completed in others. The grain acreage in some districts will be larger than last season's, but in others, owing to absence of rains early in the season, it will be less. Grass and range feed made rapid growth during the week and pasturage is abundant in all sections. Stocks are in fair condition and steadily improving. Sugar beet planting is in progress in the San Joaquin valley and early potatoes are being planted in South California. Good progress has been made in pruning and cultivating orchards and vineyards, which are thrifty and advancing rapidly. Peach, almond and lequat trees are in bloom, citrus fruit trees are in good condition and rapidly putting out new growth, and orange picking and shipping continues.

GREENHOUSES BUILDING AND PROJECTED.

Holliston, Mass.—M. E. Cutler, one house.

Barnstable, Mass.—G. B. Lewis, one house.

S. Milford, Mass.—W. D. Howard, additions.

Hamden, Conn. W. J. Schoonman, one house.

Bedford, Mass.—William G. Keiser, one house, 17x86.

Newport, R. I.—Stewart Ritchie, addition house; Oscar Schultz, additions; William Jurgens, additions.

IMPRESSIONS OF CALIFORNIA AND ITS CLIMATE.

(Continued from page 143.)

Near Oceana, I saw carnations growing in a garden which were finer in plant and flower than any I have ever seen in a greenhouse; the plants being sturdy and symmetrical with beautiful foliage and stiff erect stems surmounted by the finest and most symmetrical flowers; no stakes or support was needed, and here should be the perfect field for the work of the hybridizer and seeker after new varieties.

At Pasadena, I saw on the lawns a number of beautiful specimens of *Phoenix reclinata*, ten to twenty feet in height and of most symmetrical form, but this was the only one of the finer palms that I saw used to any extent in California and it seems to me that our large palm growers should work up this field and encourage California planters to make use of the seaforthia, lantanas, kentias, etc., which have a more graceful appearance than the old fan palm with its spiky leaves and thread-like filaments.

In the vicinity of Santa Barbara are large lemon orchards nestling in the valleys between the hills wherever there is an opening with a supply of water for irrigation and just below Santa Barbara, there is a beautiful place on the sea shore called Mitainar, consisting of small cottages each surrounded with a fresh green lawn, also a country club with spacious grounds all with the greenery of our suburbs and a splendid view of the sea.

Just before reaching Los Angeles, the train passes through several miles of strawberry fields closely planted, with just room to walk between the rows and all under irrigation, but one has to look twice to recognize this well-known plant as each leaf looks as though it had just been washed, waxed and varnished. Looking along the rows every once in a while you see a plant with a large cluster of ripe berries, not a crop at all, but say one plant in twenty-five with ripe fruit, and affording a good picking from the large area, and as the winter season advances they become more plentiful. A little nearer Los Angeles, in fact just outside the city, there is a pigeon establishment with thirty thousand breeding birds, the whole arrangement consisting simply of orange boxes piled in tiers for nests and covered with wire netting supported by rough poles. In the Los Angeles markets I saw huge piles of the winter pineapple, musk mellons labeled "fine Casabas," which must have originated in the imagination of some grower who had never seen the true type of the fine old Casaba as nothing more could have been conjured in the garden.

The giant redwoods near Vera Cruz resemble an enormous growth of hemlock spruce many times magnified, and these trees increase in size as one ascends the mountains, culminating in a grove of fine trees averaging three hundred feet in height in a valley near the summit. This grove has been

enclosed for a park and will be preserved for future generations.

On many ranches there are groves of eucalyptus planted closely together twenty to twenty-five years ago and now seventy-five to a hundred feet in height with trunks as straight as an arrow, but so far no use has been found for this tree excepting for firewood and it is about as ornamental as the Carolina poplar.

Among the disappointments of the trip, was that I did not see any San Jose scale at San Jose, although I enquired for it repeatedly. No one seemed to be acquainted with this small pest which is raising so much commotion here, except by reputation.

Although my stay in California was limited to two weeks duration, every moment was crowded with interesting sights and experiences and I have only been able to give you a very meager account of the interesting things to be seen. To give a full account of what I saw in even such a short visit would require several evenings and would, I fear, tire your patience unless you, too, have been there and have a fellow feeling in the reminiscences. The country has a charm which lingers in your memory and makes you wish to go again, but if the choice is yours the trip should be made in the spring when everything is fresh and green and the flowers are in full bloom.

SAMUEL MURRAY.

We introduce to our readers, through the portrait which appears herewith, one of the best known and best liked of the fraternity of American florists, Samuel Murray of Kansas City, Mo. Mr. Murray is one of those all-round, indispensable men who can be relied upon to do his share and more when

artistic decorative work is called for, when cultural abilities are to be demonstrated in the exhibition hall, when the stranger within the gates is to be welcomed or any self-sacrificing duty for the benefit of the craft presents itself. Mr. Murray's busy little establishment, next to the Coates House, is the first objective point of every horticultural visitor to Kansas City.

FORCING LILAC DE MARLEY FOR CUT FLOWERS.

Translated from the French.

On arrival in the fall, after unpacking, place in a cool shed and pack plants close together without watering (that means, starve the plants a little). A spell of moderate freezing will improve the forcing chances. When wanted for forcing, remove to the greenhouse, where they are to be planted right close in the ground, but so that enough passageway be left to attend to them. Small houses of 150-200 each would be preferable when larger quantities are to be forced, so that new stock can be set in every week. The houses must be darkened, and the temperature may be run up at once to 86-95 deg. Fahrenheit. Water every day towards noon with cold water, and spray the branches freely; plants want air and light from time to time, best for an hour or two in the middle of the day. After 18-20 days, flowers should be ready to cut, which will be white when forced in the dark; the natural color of de Marley being a pale lilac. If the leafbuds are allowed to grow, it will interfere with the development of the flower buds; therefore always allow the latter the preference to develop first, and until they are fairly out remove the growing leafbuds.

If wanted in the natural tint, do not start forcing before January; earlier they will not take color. Force in well lighted and ventilated houses with 85-95 deg. Fahrenheit; they want much heat at the start, until the buds have pushed 3 to 4 inches long, then gradually lower the temperature; the lower the temperature and the more air and light you give the more pronounced will the color appear. This of course is a slower process. Field-grown plants of Charles X, and white Marie Legraye, are both treated successfully for the Paris market in the latter way, and will then show their natural colors to perfection.

PERSONAL.

A. Schultheis of College Point, has sufficiently recovered from his long and severe illness to go to Lakewood, where he will spend a few weeks in recuperating.

Philip Breitmeyer, manager of J. Breitmeyer's Sons, Detroit, Mich., has been appointed second vice-president of the German-American bank of that city. With its notable prominence the bank could have chosen no man more worthy of the position.

C. A. Dards of New York, has gone on a trip to Egypt, and expects to meet J. M. Keller there and gather cyclamen persicum and nelumbiums on the banks of the Nile, in company with that distinguished plantsman, with the kind permission of the crocodiles.

Recent visitors in Buffalo: J. A. Valentine of Denver, Arnold Ringier of Chicago, F. R. Gillmann, of Rhinebeck, Max Beatus of Dayton, P. R. Quinlan of Syracuse, Wm. Schomburg of Rochester, P. Berkowitz of Philadelphia and Wm. Hagemann of New York.

SEED TRADE TOPICS

TEST OF 1905 SEED NOVELTIES.

Translated by G. B.

The Society for Promotion of Horticulture in Prussia publishes their annual 1905 report of culture-tests of novelties in this month's issue of "Gartenflora." The report is very interesting, because the plants reported on are figuring conspicuously in the novelty pages of 1906 catalogues of seed firms, it affords for intending buyers an entirely disinterested judgment of their value. We give an exact translation of the report without comment.

Flowering Plants.

Centaurea tuerpialis gigantea. The plants grew above three feet high, had long stems, which produced white flowers, not quite as large as in *Centaurea Marguaritae*, which they most resemble, and which we took them at first to be. The pleasant odor of the flower deserves special mention.

Reseda odorata grandifl. Victor. a. perfecta. This is an improved form of the *Victoria mignonette*. We can justly say that the blooms are much more intensively red, or better brown. In habit they are like the old form; but the variety does not come altogether true, as there are many ordinary *Victoria* among the seedlings; otherwise good.

Dianthus laciniatus mirabilis. Like most of the garden pinks the plant is one foot high; very small leaves, flowers three inches across and much more divided than the ordinary *laciniatus*, in aspect almost like a spider web; very soft shades of color very graceful as cut flowers and as grouping plants.

Winter Stock Queen Alexandra. (Perhaps the same as "Queen of Alexandria," mentioned in some catalogues.—Note of translator.) This is a very early variety, 80 per cent. double; flowers about July; a seedling from last year's beautiful novelty Beauty of Nice; color of flowers lilac-rose; stems 11-2 feet high, good for field culture.

Tagetes patula nana parvifl. fl. pl. Liliput. These marigolds are advantageously grown in shaded places, where they will thrive and flower well. In the public gardens of Berlin and Potsdam they have been used extensively.

Phlox Drum. gr. fl. nana compact. "Cacilien Phlox." Dwarf summer phlox remarkable for the many blue colors in the seedlings; to be recommended.

Silene pendula "Elfride." A novelty with lilac flowers, which color is new among the silenes; the foliage is yellow, but not a pleasant contrast; the seed should be sown about Christmas, the plants later on to be put in cold frames.

Dahlia variabilis "Lucifer." A single dahlia, which comes true from seeds; flowers about 2 inches across, dark scarlet; foliage dark red; good for decorative foliage groups.

"Colossal." Very large flowering single dahlia, flowers erect, all colors.

Dutch Giant Dahlias. "Herzog Hein," crimson-red. "Glory of Baarn," rose violet; half filled. "Hollandia," soft violet, well-filled and of noble form, good cropper. "Paul Kruger,"

light rose, dark striped. "Dr. K. W. v. Gorken," light rose, very large, half filled. "Germane," carmine-red, highly filled.

Cactus Dahlia. "Fire-ray." Well named; good cropper.

Impatiens Holstii. The plants grow to be 11-4 ft. high, and part of them to that circumference; color, brilliant vermilion red; always three to four flowers on the tips of the branches, each flower being about 11-4 inches in diameter; better grower than *I. Sultani*.

Schizanthus hybridus gr. fl. Supposed to be a better hybrid of the old form; we, however, couldn't possibly find any difference; crop matured quickly, but succumbed to first cold rains; it seems the plant will not stand manuring.

Cheiranthus incanus nanus comp. alba. Made little compact globulous bushes 1 ft. high; as late as Sept. 1.; first flowers, however, all double; seems to want a different culture from the ordinary winter stocks.

Linaria cymbalaria compact. alba. Another creeping plant that in this variety has acquired a globulous habit; about 1 ft. high; the small white iobelia-like flowers standing directly above foliage; best for carpet bedding.

Linaria c. globosa. Similar to above, but lilac color.

Polygonum oxyphyllum. Strong growing perennial 21-2 ft. high, leaves gray-green; did not flower.

Aster perennis hybr. Snowflake. Two ft. high perennial fall aster. first flowers impure violet; later white; not bad.

Aster perennis hybr. Townshendi. Strong growing perennial; did not flower.

Aster Hohenzollern; glossy salmon rose. A new color of this aster, good for cut flowers; color true to name.

Aster Gitania. Intended to become a new strain, almost 2 ft. high; flowers 8 inches across; character like Comet asters; colors rose, light blue and white; for large vases; not bad.

Rekord Aster, hortensian-rose. Needle-like flowers, but in size beaten by *Gitania*; color doubtful; not a favorite with us.

Rekord Aster, lilac. Same as above, lilac.

Heliotropum hybr. gr. fl. Cyklop. One and one-half to 2 1-2 ft. high; flower clusters 12 inches across and more; very fragrant; color lilac, light and dark blue; an excellent novelty; surely the largest flowering *H.* of its time; good for large grouping beds.

Physostegia virginiana gr. fl. alba. A pretty white labiateae for cut flower uses.

Echinacea Helianthus. If true to name should produce red sunflowers. Did not flower with us; report later. *Nicotiana Sanderae. N. affinis x N. Forgetiana*; with us germination of seeds did not take place at all.

Gypsophila elegans gr. fl. "Covent Garden." Flowers larger than in known variety; otherwise no difference.

To be Continued.

D. M. Ferry & Co., report a busy season, 3,000 bushels of peas to one firm being among their large orders.

NATIONAL CANNERS' ASSOCIATION.

The annual convention of the National Canners' Association opened at Atlantic City, N. Y., Dec. 14. About 700 delegates representing the chief firms in this important industry from all parts of the United States were present besides a representative element of the wholesale seed trade and quite a number of seed growers. Headquarters were at Hotel Rudolph and the exhibition of machinery, etc., was tastefully decorated for the occasion. So well pleased were the visitors with this resort as a convention point that it is likely the future conventions will be held at the same place. There was little activity in the bean market. Peas were in some little demand, Alaska Admiral, Advancer and Surprise being the principal varieties inquired for. Bookings for crop of 1907 were liberal and most of the growers and wholesalers did considerable business.

Among the seedsmen present were W. H. Grennell, A. L. Rogers, Jerome B. Rice, Robert Livingston, W. C. Langbridge, W. H. Buckbee, J. Bolgiano, Mr. Pease and Mr. Bradstreet of the Cleveland Seed Co., C. N. Keeney, O. F. Leonard, Arthur Clark and brother, Watson, Woodruff, McMorran and Grey, the Canadian pea growers, Mr. Parmelee of the Jno. H. Allen Seed Co., W. A. Dennison, Frank S. Platt, W. Atlee Burpee and Howard Earl.

CATALOGUES RECEIVED.

Frantz de Laet, Contich, Belgium. Catalogue of cacti and other specialties.

Chicago Carnation Company, Joliet, Ill. Price list of new and standard carnations for 1906.

George W. P. Jerrard Co., Caribou, Me. 1906 catalogue of seed potatoes, early corn and seeds.

Burpee's 1906 Wholesale Seed Prices for Market Gardeners and Florists. W. Atlee Burpee & Co., Philadelphia.

Thomas J. Grey & Co., Boston, Mass. Seed Catalogue for 1906. Lists also trees, garden plants and implements.

Rosedale Nurseries, S. G. Harris, Prop., Tarrytown, N. Y.—Supplement to general catalogue of plants, shrubs, roses and trees.

F. E. Conine Nursery Co., Stratford, Conn. Spring and Fall, 1906, Catalogue. A well printed, illustrated list of choice nursery stock.

"A Little Green Book for the Gardener." A cute little pocket catalogue issued for 1906 by Henry Saxton Adams, Jamaica Plain, Mass.

Hammond's Slug Shot Works, Fishkill-on-Hudson, N. Y. Pamphlet of Horicum, the San Jose Scale Killer, Thrip Juice, and other insect remedies.

Griffith & Turner Company, Baltimore, Md. Catalogue No. 19 of Farm and Garden Supplies. A very complete list, especially of machinery and farming implements.

Thirtieth Anniversary Supplement, including prize awards of 1905—and the story of "Seeds That Grow." With

A R I S T O C R A T

WILL BE AT TORONTO WITH THE GOODS

CHICAGO CARNATION CO., JOLIET, ILL.

numerous illustrations. W. Atlee Burpee & Co., Philadelphia.

Hoopes, Brother & Thomas, West Chester, Pa.—Handbook No. 2, of ornamental trees and plants. A pine branch and cone forms a very appropriate cover adornment to this finely illustrated publication.

Moon's Trees, 1906, Horticultural Art Book issued by the Wm. H. Moon Co., Morrisville, Pa. Typographically one of the finest catalogues of the season. Text and pictures calculated to whet the appetite for lawn and garden beauty.

Arthur Cowee, Berlin, N. Y., Catalogue, 1906, of Groff's New Hybrid Gladioli. Mr. Cowee is all right and so are his gladioli. He has devoted a life of ceaseless industry to this specialty and well deserves the great success he has achieved.

LISTS OF PATENTS.

Issued January 30, 1906.

- 810,972. System for Sprinkling Lawns, Gardens, Greenhouses, Parks, etc. Frank H. Paradise, Denver, Colo.
- 811,276. Arbor. John Cooper, Diamond, La.
- 811,373. Warp Stop Motion. Thomas A. B. Carver, Glasgow, Scotland.
- 811,508. Sash-Lifting Apparatus for Greenhouses. William O. Johnston and Phillip J. Foley, Chicago, Ill.

Issued February 6, 1906.

- 811,600. Combined Weeder, Orchard-Cultivator and Fallow-Plow. William Turner, Wenatchee, Wash.

IMPRESSIONS OF NEW CARNATIONS.

Remarks By Edward A. Stroud At Florists' Club Of Philadelphia, Feb. 6, 1906.

To rightly judge a carnation on the exhibition table, a good idea is to scale it up according to one's own judgment on the points adopted by the Carnation Society; you will be surprised how much better knowledge you will get of a variety by following this method.

Lady Bountiful showed up prominently, winning all prizes in the class of whites; if any fault, it shows a lack of substance which is against it as a shipper.

My Maryland unfortunately could not be staged by Mr. Weber, as that variety with his other exhibits (some 1200 flowers in all) carried poorly, owing to the warm weather. The Strafford Flower Farm showed 100 of this variety and was fortunate enough to secure an award. Mr. Weber has made an announcement to the trade through the various papers which is a square deal. My Maryland, as you know, has not been successfully grown everywhere. As grown at Strafford, its habit differs entirely from its growth with Mr. Weber; but we do not by any means pronounce it unworthy and feel confident that if certain grassy peculiarities can be eliminated this variety will prove a good thing, as its keeping qualities are above par. Enchantress was shown extensively and nothing could compete with it in its color. It occupies a field of its own.

Robert Craig is certainly a thoroughbred; it looked beautiful staged, and as seen growing at Mr. Ward's. Whether this fine condition can be duplicated by the smaller growers and whether it can be made a commercial success is a question yet to be decided.

Mr. Fisher's new red seedling Beacon, looked well, standing out prominently from all others in its brightness of color; seeing it growing at his place impressed me with its commercial value, being such a free bloomer; its stem seemed a trifle weak, but not sufficiently so to injure it.

Red Lawson will do when there are no other good reds about. We

do not like its color. The extensively advertised Victory showed up well; many orders have been booked for it. Mr. Guttman telling us of five firms who had placed orders aggregating 120,000. We have seen it only on the exhibition table. Mr. Haines is as enthusiastic as ever about his red carnation named after him. It did not carry well to Boston, but as we saw it growing at his place last March it was a grand sight. We notice the reports from the west say it is inclined to be somewhat sleepy during the early fall months. We were further convinced of its good qualities after seeing it growing at Peter Fisher's.

The Lawson gold medal winner, Elsa Struss, a seedling of Mr. Ward's, was beautiful, and seeing it grow convinced us that it will be heard from, as it resembles Enchantress in habit and looks free. Mrs. Ward, another seedling of Cottage Gardens showed breeding; it is a question whether it would not have given a good run for the medal if 100 blooms could have been shown.

Aristocrat is certainly ideal in form, calyx and stem. Personally, we are tiring of the Lawson shade of pink. Helen Goddard, while not a large flower, is recommended for its commercial value. It is slightly lighter in color than Lawson. We did not have a chance to see it growing. Pink Patten, a sport from Mrs. Patten, was not particularly interesting to us.

Evangeline, another seedling of Peter Fisher's, has merit; as we saw it growing, it looked healthy; it is smaller than Enchantress, brighter in color, has good substance, and seemed freer. Mr. Fisher told us he would not send it out unless he could eliminate its slight tendency to burst. It is a question if there is a market for Evangeline, if Enchantress keeps up its good name. Fiancee was not largely shown, having no entry in either the 100, 50 or 25 class. We imagined it was impossible to get so many good flowers together.

Winsor attracted us especially—its color being a very pleasing shade of pink. It showed all the requirements of a first-class flower.

Taking it all in all, the show was a success. The public seemed to appreciate that it was free to all, and we trust Toronto will be able to arouse the same enthusiasm when the convention meets there.

500,000 COLEUS

Verschaffeltii, Golden Bedder and fancy named varieties. Can deliver at once or will book orders for March and April delivery

Rooted Cuttings, 60c. per 100, \$5.00 per 1000 Cash.

H. N. EATON, South Sudbury, Mass.

QUEEN BEATRICE

NEWS NOTES.

John Clump, 25 years old, employed by H. F. A. Lange, Worcester, Mass., fell through the roof of a greenhouse while making repairs on January 31. He was taken to the Emergency Hospital.

Park Commissioner Ginther of Buffalo, N. Y., asks for an appropriation of \$10,000 for a new plant propagating house in Humboldt Park, and \$6000 more for repairs on park conservatories to meet the necessary demand for plants for the small parks, triangles, etc.

The study of the structural timbers of the Pacific coast was begun by the Bureau of Forestry, now the Forestry Service, in 1902, in order to determine with greater accuracy the exact scope of their commercial use. The red fir and the western hemlock (better known as Washington pine, Alaska pine or gray fir) have hitherto monopolized the tests with the results that there has been a largely increased demand for both. About a year ago the Forest Service issued a circular, "Progress Report on the Strength of Structural Timber," which has been exhausted by the request made for it. A revised edition is now in preparation.

BUSINESS CHANGES.

The Washington Floral Co., 85 S. Main street, Washington, Pa., is to be under the exclusive management of J. V. Poague in future.

Walter R. Boody of Northwood, N. H., who has been associated with his father, G. W. Boody, in the florist business for the past few years, and Prof. E. K. Welch will open a general florist and gardening business at York Harbor, Me., about April 10.

The Lake Newell Floral Co. has been incorporated at East Liverpool, O., with Thomas Anderson, president; Fred B. Lawrence, secretary and treasurer. It is said that Gus Bradenburgh, now in the employ of the Thompson Park commission, will be manager. A large greenhouse is to be built at Newell.

Mr. George Baldwin, for the past six years in charge of the orchid department of Siebrecht & Son, New Rochelle, N. Y., will establish a plant exclusively for orchid growing, under the firm name of Carrellis & Baldwin. The new concern will be ready for business April 1, and will be located at Secaucus, N. J. Mr. Baldwin leaves his position under most pleasant conditions and carries with him the best wishes of his recent employers for his success.

Announcement

I HAVE pleasure in announcing, that I have this day purchased all the assets of the Clucas & Boddington Company, which includes their Nurseries, and stock thereon, located at Sparkill, N. Y., and will conduct the business as formerly from this address, to be known as the "**Palisades Nurseries.**"

Special Surplus Lists, of Dahlias, Phlox, Hardy Perennials, Evergreens, and Flowering Shrubs, and Bulbous Stock, of which I have a very extensive collection, will be sent to the Trade on application, and a regular price list, now being prepared, will be mailed when ready.

I have retained most of the former employees to assist in the management, and intend conducting the business, as heretofore, assuring customers of prompt and careful attention to all orders entrusted to my care.

I would be pleased to receive special quotations, and Trade Catalogues, on general Nursery Stock.
JOHN M. STEVENS
The Palisades Nurseries.

A BARCAIN

I have for sale a modern range of greenhouses, 25,500 feet of glass, 1 1/2 miles from wealthy growing city of 28,000 people. Forty-five minutes from Pittsburg, Pa. Three railroads and express lines, 28 acres. Ideal soil for roses and carnations in abundance. Admirably adapted to the growing of small fruit and garden crops.

Sixty horse power boiler, steam heat. Free natural gas for all light and fuel for greenhouses, and farm buildings. A most complete private water system, 1,000 barrel storage tanks, large dam, never failing springs. Producing oil well on the farm. Buildings high and dry, away from all smoke, dust and dirt, fogs unknown, plants free from disease, houses well stocked and producing paying crops, best market selling high grade stuff direct to retailers. Best of reason for selling. Price, \$22,000, part on time, will show a net profit of 24% above expenses, can be increased. This offer will bear closest investigation.

PHILADELPHIA NOTES.

H. Bayersdorfer & Co. have bought out the stock, fixtures and good will of the florists' supply establishment of Mr. Hantsch at 7th and Lehigh avenue. Mr. Bayersdorfer, Jr., is at present running the concern.

Geo. D. Clark of the Henry A. Dreer Corporation says that perennial seeds should be sown within the next 30 days. If this is attended to at once most of them will flower the first year and give a handsome profit on the investment.

E. H. Bauer of Chiselmhurst, N. J., has just placed a contract with the Burnham, Hitchings, Pierson Co., through D. T. Connor, for an addition to his carnation establishment, 100x 28, with all the latest improvements.

The Riverton Nurseries (Dreer's) have recently purchased 76 acres nearby (at Cinnaminson), where they are to grow perennials and other stock. No glass will be erected at present. The soil is a deep heavy loam and much superior to the sandy character which generally prevails in this part of Jersey. At Riverton two new houses have been erected for dahlias. A dahlia bought here labeled Frank D. Smith will be Frank D. Smith and not something else. That's the Dreer way.

W. S. Maull, late treasurer of the defunct Peacock Company, is back in his old position in the accounting department of Lit Bros.

J. D. Eisele will arrive home from Europe on the S. S. Amerika of the Hamburg-American Line on Feb. 19.

MONTREAL NOTES.

Cooper and Johnson are giving a gold medal for competition at the fall Horticultural Show. See their seed catalogue for particulars.

Michael Judge has been elected Mayor of St. Paul. If His Worship manages the affairs of that prosperous town as well as he does his carnations and ferns, we prophesy a very pleasant and prosperous year.

J. McKenna was elected Councillor of Cote des Niges after a hard fight. Joseph Ward, the wholesale agricultural seedman, was elected alderman by acclamation of the city of Montreal. Montreal's florists seem to combine politics and the trade pretty lively, as we have one mayor, one alderman and three councillors among us.

Cut flower trade still keeps very brisk, the supply not being nearly equal to the demand. Carnations are still keeping well to the fore. There seems to have been a lot of diseased Harrisii lilies last year, some of our florists losing half of their stock. Hall & Robinson have a very fine sport of Pink Lawson carnation, color a light pink and very free flowering.

Frank P. Lane of Bangor, Me., has leased the Morrill greenhouse to Brewer for a term of years.

Roses and
 Carnations
 A Specialty.....

WHOLESALE
 GROWER OF CUT FLOWERS.

TO BUYERS

Patronize our advertisers, they will treat you right

VICTORY

The most prolific of scarlets, is a fancy in the fullest sense of the word, requires only ordinary culture, wholesaled at \$25.00 per 100 at Christmas.

Cut Flower Market Reports.

BUFFALO Wintry conditions, with the thermometer below zero, have kept the florists busy handling coal. Roses have been in steady demand with prices unchanged, but there were enough to satisfy all. Carnations were plentiful and the prices dropped considerably, Enchantress being leader in quality. Prices have not changed much, while ordinary stock required some urging, which blocked up considerable. The violet trade livened up and prices held firm. Bulbous stock was plentiful and in fair demand, while lilies of the valley and Roman hyacinths are still on the quiet list. Sales of green goods are awakening some.

BOSTON The top grade of American Beauty rose is missing from our quotations this week—the first time within a year. Very few blooms of any grade are coming in the most of these being but little better than ordinary Bonsilenes in size. Other roses, while not overabundant, are excellent as to quality and increasing in quantity and probably another week or ten days will find them in supply sufficient for all demands. Carnations are splendid and the cold weather has reduced the receipts with good results on the market value. Violets are selling better than for some time past, Valentine's Day furnishing the needed stimulus. All bulbous stock and lily of the valley is abundant. La Reine tulip is the best seller on the list. Sweet peas are increasing in supply and are very choice in quality generally.

CLEVELAND The retail stores have been showing a number of novelties in floral valentines, such as lavender and purple violet boxes, tied with maline, purple and gold cords, designs in willow ware, hearts pierced with arrows and holding violets and lily of the valley, Indian tepees, bird's nests, etc., which are very effective.

The market is fair, stock good and quite plentiful; there is a profusion of violets, and lily of the valley, all exceptionally fine.

DETROIT The bright side of business was in evidence again the past week, which means another step toward a busy season. An extensive supply of bulbous stock has served to weaken the prices on carnations. Roses are beginning to show up better both in quality and quantity, though Beauties have been scarce. Violets are more salable each week, and forget-me-nots

are not forgotten. There are some very fine specimens of rhododendrons and other flowering and foliage plants which sell satisfactorily.

There has been much design work at times to keep florists busy.

LOUISVILLE Business conditions the previous week were in some cases a little slow. Carnations are of satisfactory quality and have a great demand. The supply is good. The quality of roses is fine, with the supply and demand satisfactory. Lilies of the valley, mignonette, forget-me-nots, violets, etc., find very gratifying demands, with the supply generally fair. Hyacinths, jonquils, tulips, etc., are not neglected, and are in good supply.

NEW YORK Dark skies, Valentines' Day, Roosevelt wedding and a host of other events have conspired to make a little tumult in certain lines in the floral business. American Beauty roses of the higher grades have soared to full Christmas values, but are impossible of realization, for the very good reason that practically none are in existence. All roses, also violets, and some other staples are enjoying a better market this week than last. Bulbous stock is of course abundant and affected but little by the improved demand.

PHILADELPHIA Good business last week and stocks generally well cleaned up. A healthy tone and little left over is often better than a boom in prices with a slump at the finish. Quotations generally have been firm without advances, as the distributing centers have been wise enough to think of their steady buyers and consider what the market would stand without flopping. Good prices are ruling now. White roses were about the scarcest item on the list. Carnations moved with a rush towards the end of the week. Notwithstanding the enormous receipts of bulbous flowers the market absorbed same at fairly remunerative figures. Cattleyas were very scarce. Marguerites are improving and white lilacs are still fine. That harbinger of spring, the pussy willow, is in town with his wife and dots the fields of commerce with bunny tails, suggesting the madness of March to the passing throng. Gardenias are more plentiful.

SAN FRANCISCO The demand incidental to a triple funeral of heroes who lost their lives in trying to save the lives of others at the U. S. transport Meade fire in the bay sent prices of tea roses and American Beauty to threefold above normal, the supply being but scant of what was

wanted. All of last Saturday and until Sunday afternoon, while the bodies lay in state in the great rotunda of the City Hall, tens of thousands of people passed through the long floral bordered lane leading to and about the flower-built bower in which the caskets were half concealed. In addition to the wagon loads of bouquets, mostly dollar bunches of cut blooms, largely of violets, of which there is no dearth, there were many beautiful designs, the pieces standing higher than the heads of tall men and almost concealing the endless line of people.

BOWLERS ENJOY THEMSELVES.

The annual banquet of the Boston Seed Trade Bowling League was held last Monday night at the Langham Hotel and about sixty members and guests were present.

President Harry Jenner presided and acted as toastmaster, introducing the following speakers: Mr. Edward Crowley, Joseph Free, William Davy Chris Enholm, John Guérineau, William Cahill, Stanley Perry, Herbert Capers, William Nicholson, James Rough and Grafton Thorp.

During the evening songs were rendered by Mr. W. Haley, Harry Hodgkins, Jos. Free, Harry Jenner, William Davy, M. Holland, and last but not least Mr. Harry Reid, who was easily the hit of the evening. Mr. William Casey and Chester Carruth rendered some very fine selections on the piano.

Mr. W. C. Binns, manager of the alleys where the boys bowl, was presented with a gold charm as a token of appreciation for the good treatment he has accorded them during the season.

The R. & J. Farquhar & Co. team proved that they were hard to beat by finishing in the lead, winning the pennant for the second time. The teams finished as follows:

	Won.	Lost
R. & J. Farquhar & Co.	30	15
Schlegel & Fottler Co.	28	15
Jos. Brock & Sons	27	18
W. W. Rawson & Co.	25	22
Phil. St. Flower Market	24	22
McC. Hall Flower Market	23	23

FIRE RECORD.

A greenhouse owned and occupied by Philip Lowenbaup on Mount Olivet avenue, Middle Village, N. Y., got on fire Feb. 4, causing a damage of \$150.

"Frederick Justus Geist, florist, Melrose, Mass., has filed a voluntary petition in bankruptcy. His liabilities amount to \$11,790, of which \$928 is for tax, \$66 for wages, \$7310 secured, and \$1459 accommodation paper. There are about 30 unsecured creditors. Assets are estimated at \$9645, of which \$9200 is represented in commercial real estate."—Boston Globe.

THOS. H. BAMBRICK

34 South 7th Street, Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

WANTED TO RENT—Three or four greenhouses and grounds in the vicinity of Boston. Address M. B., care of HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—First-class foreman for Rose Houses, experienced in American Beauty growing. Married. Salary at first \$75.00 per month with house. Address Rose House, care HORTICULTURE, Boston.

WANTED—First class store man, one who is good decorator and maker-up. Must also take care of small conservatory and do some planting in spring. State salary expected, age, etc. Address Lewis, care HORTICULTURE.

WANTED Two young rose growers for commercial place near Boston, to take charge of section each, under foreman. Write, giving references, and state wages required, to R., care HORTICULTURE, 11 Hamilton Place, Boston. It

WANTED—By all-around greenhouse man, middle age, Protestant, American, strictly temperate, trustworthy, honest, willing to work; wages, \$15 per month with board and lodging. Southern New England preferred. Address B. H., Hoar, P. O. Box 232, Fitchburg, Mass. It

GREENHOUSE HEATING AND BOILERS.

A paper read by Chas. W. Cary before the Lenox Horticultural Society.

The heating of glass structures has always been and still is a matter of greatest importance to those interested in the growth of plants, fruits and flowers.

The perfect and economical heating of greenhouses is something that must be looked into very carefully, as on this depends in a great measure the success of the gardener or florist.

At a very early period in the world's history the Romans were acquainted with the method of heating rooms and buildings by means of flues. This was adopted for greenhouse purposes, there being nothing at the time that would answer so well. This system was and still is, a poor one at the best, and the objections were so numerous that those interested were on a lookout for something better. The origin of the introduction of hot water as a means of diffusing artificial heat appears to be hidden in considerable obscurity. It appears, however, to have been first used in France for hatching chickens, in the year 1777; it may have been used before that time, but there is no definite information as to its use previous to that date. It was at that time in a very crude condition, and did not give much satisfaction for a long time, and it seems to have made very little progress for about forty years. In 1817, it was introduced into England, and has kept advancing and improving in favor until at the present day it is considered far ahead of every other method of heating. Water is one of the best heat conductors known, and it will rapidly absorb the heat from the fire and convey it by means of pipes to the most distant parts of the house. Hot water therefore presents one of the best mediums known for heating purposes. It gives a uniform temperature, spreading evenly throughout the houses a mild and humid atmosphere, second to none for the growth of plants, fruits and flowers.

The motive power which produces circulation of the water is the unequal pressure on the return pipe, in consequence of the greater specific gravity of the water in the descending pipe over that in the boiler and the ascending pipe after the fire is started. Let us suppose heat be applied to a hot water boiler, a dilation of the volume of water takes place and it becomes lighter, the heated particles rising upwards through the colder ones which sink to the bottom by their greater weight, they in turn becoming heated, expand and ascend to the surface. As soon as the water in the boiler thus acquires heat, the cold water in the return pipe at the bottom of the boiler is pressed with a force equal to the difference of temperature between the ascending and descending particles. By means of this unequal pressure the water is forced to circulate through the lines of pipes, and will continue to circulate so long as the water in the return pipe is colder and therefore heavier than that which leaves the boiler through the flow pipe, and as the water in the pipes is constantly parting with its heat, both, by radiation and conduction, while that in the boiler is constantly receiving addi-

"I have used your Fumigating Kind Tobacco Powder for the last six years and prefer it to any other remedy for Green Fly; it is clean and easy to apply and does not discolor the blooms."

WILLIAM K. PARTRIDGE, Cincinnati, Ohio.

Why not ask for a free five pound trial sample its convincing at only 10¢ is you the express charge. It's no new fangled thing, hundreds write of it like Mr. Wm. K. Partridge. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOTHOLT COMPANY, 114 West Street, New York City, N. Y.

tional heat from the fire, an equality of temperature can never occur.

In heating greenhouses with either steam or hot water the boiler is placed in the cellar or pit where the nature of the ground permits digging. Oftentimes owing to the houses being built on rock it is impossible to place the boiler in a cellar. In this case it can be placed on the floor level of the greenhouse, and it then becomes necessary to use what is termed the drop system of circulation. This term applies to hot water heating only. By drop circulation is meant where the main is carried directly from the boiler to the highest point on the job, and there relieved of air by a connection to the expansion tank. The flow main is then carried along the ridge of the house to its farthest point, and then drops or feeds into the return pipes under the benches. While this system works as well when properly installed as the usual way (that is, by having all the pipes under the benches), still wherever it is possible to do so I would recommend that a cellar be dug for the boilers and be made as deep as possible; the deeper the cellar is dug, the better will be circulation of the water; for the deeper the cellar, the more pressure there will be to the water, and the more pressure the better the circulation.

Where there is more than one house, the boiler should always be placed as near to the center of these houses as possible. This is done to insure an even distribution of the heat, and has always been found to be much more satisfactory than when the boiler is placed otherwise.

The return pipes as well as the flow pipes in heating a greenhouse are counted as radiating surface, or, I might say, all pipes, flows, branches, and returns. The expansion tank should be of sufficient size for the work: that is, one gallon capacity for every 50 square feet of heating surface; otherwise there will always be trouble by having the tank overflowing whenever you are firing hard; and if the expansion tank is not properly connected, which I have often found to be the case, this overflowing has been known to syphon all the water out of the apparatus, without the man in charge being aware of it.

Now comes the question: Which is the best pipe to use in heating a greenhouse? Many gardeners claim they get better results from wrought iron pipe than from cast iron, while many others claim just the opposite. Now, while this is a matter of opinion and a very delicate subject to dwell on, still, from my personal experience, the only advantage I can see that wrought iron pipe has over cast iron is that it is easier to install and heats up quicker than cast iron. While, on the other hand, once a cast iron pipe is heated, it will hold its heat much longer than wrought iron.

This is a great advantage in case of an accident where it is necessary to draw off the water on a wintry day. Then, again, the life of cast iron pipe in a greenhouse is more than double the life of wrought iron, unless the wrought iron pipe is painted every year. In painting pipes in greenhouses nothing but lampblack and oil should be used. Under no circumstances should anything else but this be used, as it has been proven to be injurious to plants to use anything else. One little thing, and it is a very important one, I would like to call the attention of gardeners to, and it is the necessity of opening the air valves every day. This applies to a hot water job of the latest style; that is, a galvanized tank usually placed in the potting shed in place of the old-fashioned castiron ones at the end of each coil. I often find that these vents are never opened from the day the job is erected until there is some change made in the piping. Now, while this is a very small matter, still it is a most important one, as there is a certain amount of air in water; and if these vents are not opened regularly, air will gather and impede the circulation of the water and oftentimes stop the circulation entirely. Now, while speaking of valves, I would like to impress upon all gardeners and florists the advantage of placing stop valves (by stop valves, I mean a valve for shutting off the heat) on both the flow and return pipes of every coil and also the boiler. While this adds considerable to the cost of erecting your heating plant, still in case of accident in winter it will pay for itself tenfold. Some of the advantages to be gained by doing this are as follows: We'll start at the boiler. Suppose there is only one boiler heating the plant. It gives out on a cold day if you have not got it valved; you lose all your water and heat with it; whereas if the boiler were valved it would only be necessary to close the valves, and your water being heated, would remain in the pipes and keep your houses warm until temporary or final repairs could be made. Where there is more than one boiler doing the work, the bad one could be shut off and the other one or more, as the case may be, could be kept going and keep the houses from freezing. In the course of my experience I have seen many a range of houses in danger of freezing when one boiler gave out, simply because the boilers were not valved; when the one boiler gave out, it crippled all the others, owing to having to draw the water off all the others until repairs could be made. Every main to each house, flow and return, should also be valved for similar reasons, and I would like all gardeners and florists to profit by my experiences, and whenever it is possible to do so, insist that the boiler and the flow and return main to each

house be valved, and I can safely say that if you follow this advice it will save you many a gray hair should anything happen your piping or boilers in mid-winter. Experience has taught me this lesson thoroughly.

Now another question which is often asked, and I think is a very delicate one to dwell on, because I know a great many gardeners and florists will not agree with me, is: Which is the best heat for greenhouse purposes, steam or hot water? I claim hot water has a great many advantages over steam, and is therefore the best for greenhouse purposes. Among the advantages hot water has over steam are the following: absolute safety under all possible conditions; the apparatus cannot explode, being open to the atmosphere through the expansion tank; ease of management; it is not necessary to hire an engineer to run it; anyone that can put on coal can attend to it; economical in fuel; when once heated it is not necessary to force the fire, a slow fire answering all purposes, and this will keep the water circulating through all the pipes, so long as there is any fire left, and a great saving of coal is the result.

It is noiseless in operation, there being no snapping and cracking, as is often the case with steam. There is no possible danger from fire; the pipes and boilers, being filled with water, cannot be heated to a higher degree than boiling water. It can therefore be readily seen that there is no danger to surrounding woodwork.

The heat being driven from pipes filled with water, it can be regulated to a degree. In a steam heater the temperature must be 212 degrees or nothing. The moment the water in the boiler becomes of a lower temperature there will be no heat in the pipes, notwithstanding the consumption of fuel continues. With hot water you can heat to any degree from cold water to boiling by simply regulating the fire. The only time steam is more advantageous to use than hot water is, to my mind, in a very large range of houses or in the extreme northern part of the United States or

Carman's Antipest

INSECTICIDE AND FUNGICIDE

For the Garden, Orchard and Greenhouse.
Nonpoisonous and harmless to vegetation.

Kills Green Fly, Aphides, Bark Lice, Thrip, Mealy Bug, Red Spider, Scale, Wire Worms, Ants and Slugs.

It is the Grower's Friend, handy to keep and effective, mixes readily in water. Destroys all insect pests and all fungi. \$1.50 per gallon. Assorted quarts, pints and minis. Send for circular.

HEATING! HEATING! HEATING!

200,000 SQUARE FEET OF GLASS IN 1905.

PRETTY FAIR, NOT CONNECTED WITH ANY COMBINATION OR TRUST.

READ THE FOLLOWING FROM MR. J. D. COCKROFT.

NORTHPORT, LONG ISLAND, N. Y.

MR. WM. LUTTON,

DEAR SIR:—I wish to express my entire satisfaction of the heating plant that you installed, in my three (3) carnation houses, 34 x 175, we have not the slightest difficulty in maintaining the temperature, and I am particularly pleased with the boiler.

Yours very truly,

J. D. COCKROFT.

SOME PRIVATE WORK ALSO.

MR. WM. H. LUTTON,

DEAR SIR:—I am very well pleased with the heating of our palm house, your work has been done in a satisfactory and workmanlike manner, true to the letter of your contract, which means first-class work, you have the liberty to use my name and can refer anyone to me, and I shall give you the credit that you are justly entitled to.

Yours Respectfully,

JOHN SHORE, Supt. Wm. H. Macy Estate, Harrison, N. Y.

Original copies of the above letters with many others on file at my office and will be furnished on application.

WILL FURNISH YOU SEPARATE ESTIMATES ON YOUR HEATING AND BUILDING.

WILLIAM H. LUTTON, West Side Ave. Station, C. R.R. of N. J., Jersey City, N. J.

Canada, where the winters are very severe. The only advantage steam has in the central part of the United States is that it is cheaper at first cost to install, and it will heat the houses more quickly than hot water. For this one reason I recommend it to be used in large ranges.

The question of selecting a boiler is often a very serious problem to the gardener or florist, but there are so many different makes and styles on the market at present that it would be almost impossible to recommend any certain make, but I would advise anyone in selecting a boiler for heating purposes that it is not always safe to rely on ratings in the various boiler catalogues, for this reason: A boiler that will work up to its full rated capacity under one set of conditions may be an utter failure in another installation, although the load on the boiler under both sets of conditions may be exactly the same. This applies more particularly to boilers which have a large amount of flue surface and a long fire travel. Such boilers will only do their best where there is a very strong draft; when attached to a chimney where the draft is indifferent, they may not carry half the load assigned to them in the catalogue.

The reason for this is that every pound of coal burned requires for its perfect combustion a quantity of air, which may be stated, theoretically, as 150 cubic feet. In practice, however, the amount required for good combustion will run from 50 to 100 per cent. more than the theoretical quantity. When, however, there is an insufficient supply of air, the coal will burn away just as rapidly, but will yield much less heat than when there is a sufficient quantity of air. To put the matter plainly, each atom of carbon requires for its perfect combustion two atoms of oxygen, and when the carbon combines with this quantity of oxygen it burns to carbon dioxide and yields per pound 14,500 heat units. If, however, through an insufficient air supply there is less than two atoms of oxygen to one of carbon, the carbon will then combine with but one atom of oxygen and will burn to carbon monoxide, yielding 4,500 heat units, or less than one-third the heat given off when the combustion is perfect.

Now when a boiler with a long fire travel is attached to a chimney flue of scant size, the gases cool before en-

tering the chimney and the velocity or the rising column of air is not sufficient to pull enough air into the mass of fuel to promote good combustion.

A boiler with a direct draft would deliver the gases into the chimney at a higher temperature, which would increase the velocity of the draft and cause an increase in the flow of air through the fuel, giving better combustion and higher efficiency. This will explain the reason that in some installations a boiler will burn a large amount of coal with very low heating effect. In putting in a boiler where there is any doubt about the draft, it is always good practice to select a heater that has a short fire travel and direct heating surfaces. The draft, or rate of combustion, in this direct draft boiler can be controlled by a good cross damper in the smoke pipe, and under these conditions better fuel economy can be obtained than where an attempt is made to retain all the heat in the boiler, which is, of course, an impossibility. The value of good combustion cannot be too strongly emphasized, and without a strong draft and a hot fire box, the fuel will burn away and yield a low percentage of its heating power. Considering the fact that coal, burning to perfect combustion, will yield three times as much heat as when through lack of oxygen the combustion is at its worst, we must see the importance of selecting a boiler that will not be handicapped by having a long, narrow and tortuous fire or gas travel. To sum up, boilers with more than 50 per cent. of fire or indirect surface, should only be attached to a chimney flue of such proportions as will insure a strong draft.

We Told You Last Week

ABOUT

"Sap Free Cypress"

and what we understood by the term and what you received when you bought "sap free" from us—now a word about our castings and the kind of iron that goes into them. "Any old scrap" won't do for our castings. We use high grade iron only, straight from the United States Steel Co. Why so particular? For just these reasons: iron like anything else can stand just so much, if half its strength has already been expended, does remelting the scrap give back that strength?

Then another reason: the higher the quality, the finer are the granulations; the finer the granulation of the iron, the harder to rust. So you see what one of our greenhouses means—it means starting right and staying right.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

Notes on Herbaceous Plants

CAMPANULA CARPATHICA

The natural order of Campanulaceæ contains many plants of great beauty and of great importance to those who make a specialty of hardy plants. The genus *Campanula* itself comprises many species worthy of notice. Bailey in his encyclopedia enumerates 63 species besides some varieties. In 1896 when I assisted in preparing a list of all the herbaceous plants in cultivation in the Royal Botanic Garden, Edinburgh, we had then 106 species and varieties of campanula—rather a formidable collection. Many of these, of course, were not fit subjects for the ordinary garden but in a botanic garden a collection is the primary point. I have beside me a catalogue of a reputable hardy plant grower of Europe and he offers for sale 96 species and varieties of campanula. Campanulas as a general rule are of easy culture; true, there are a few of the Alpine kinds that do not thrive under ordinary treatment, but these are not of sufficient interest to come under the scope of the present article.

C. Abietina. This lovely species from East Europe is, I believe, comparatively rare. The fronds are borne on slender stalks which rise to a height of 15 to 20 inches. They are of a beautiful blue, the centre of the flowers being almost white. It takes a moist soil but the soil must be well drained. It is of a tufted habit and may be easily increased by division or seed.

C. Allioni. A very pretty alpine species, comparatively easy to grow. It is a low growing plant seldom exceeding six inches in height. The flowers are large for the size of the plant and are borne singly. They have a purplish hue. It is a native of the Alps of Pied-

mont. It likes plenty of moisture, yet I have never found it to succeed well in the border. It does best in the rockery where it likes to get into the crevices. It may be propagated by division or by seed.

C. alpina. This is another alpine species, rare but of easy culture. It is very downy, being covered with greyish hairs. The flowers are dark blue, borne on hairy stalks about 10 inches high. It does not spread much and is best increased from seed.

C. barbata. A pretty little species from the Alps of France, commonly called the bearded harebell, owing to its having a beard at the mouth of its beautiful pale blue flowers. These are borne 3 or 5 on the stalks which rise to a height of 10 inches. It is of easy culture and delights in a moist well drained soil. There is also a white variety.

C. caespitosa. A beautiful little alpine with a delightful tufted habit, growing only a few inches high. It is a most desirable plant for border or rockery. The flowers are nodding and are pale blue and there is also a white variety. This species is also known under the names of *pumila* and *pusila* but it is distinct from either of these species. It is easily propagated by division.

C. carpathica. A native of the Carpathian mountains. One of the best dwarf border plants. The flowers are large and bell-shaped and individually are equal to the more common *C. persicifolia*. Whilst a dwarf plant, rarely exceeding 12 in. in height, it has a most robust habit. There are several varieties all worthy of cultivation. *var. alba*, *pallida*, a paler blue

variety, *turbinata*, a dwarfier and more compact grower, also a white variety of *turbinata*. It is easily increased either from seed or by division.

C. garganica. This is a rather showy species. The leaves are of a glossy green and the flowers, which are borne on branching racemes, are pale blue shading to white in the centres. It grows only to a height of 6 inches and thrives well in ordinary soil in the herbaceous border. It may be propagated by cuttings or from seed.

C. isophylla. This is a pendulous species and is more often seen in the greenhouse than in the flower garden. As a basket plant it has few equals and is most frequently used in Europe grown as a hanging plant. In the cottagers' windows of England and Scotland, it is grown in fine condition amongst the fuchsias, Aaron's beards, etc. A white variety of this species is, I think, even more valuable than the type; it seems to be a more free bloomer. Easily propagated by cuttings.

C. latifolia. In this species we have a good border plant. It is a strong grower and when well-grown reaches a height of about six feet. The flowers are large and dark blue, borne on loose graceful stems as many as 12 to 15 on the stem. It requires a good rich soil and should be lifted every two or three years and replanted in enriched soil. There is a fine white variety of the species which is also well worthy of a place in the border as is also the variety called *macrantha*. This variety is larger than *latifolia* itself and the flowers all paler blue. It is a strong, vigorous grower and responds quickly to liberal treatment in the way of manure.

C. lactiflora. An excellent hardy plant and a most vigorous grower. It has long spikes of white and blue shaded flowers, the spikes when well grown attaining frequently the height of 5 ft.

C. Medium. This is an old favorite commonly called the Canterbury Bell. It is too well known to need any description. There are many varieties and colors, both double and single. It is a biennial and seed should be sown annually to keep up a succession of flowering plants. If seed be sown in the greenhouse early it may be treated as an annual flowering the first year from seed, but they are much superior when treated as biennials. Seed may be sown either in frames or open ground. The young plants should be thinned out or transplanted, allowing them room to develop into good specimens. A light protection such as leaves or rough manure is necessary in the winter time, taking care to remove it very early in spring to prevent damping off at the crown.

C. persicifolia. One of the most valuable border plants. It is commonly called the peach-leaved campanula, owing to the leaves resembling that of the peach tree; they are, however, very much narrower in the campanula. The flowers are large and in the type blue, borne on stems rising to a height of three feet. There are several varieties of this species equally as valuable; the best are *alba*, a pure white variety; *alba-cornuta*, which has beautiful white, blue-shaded flowers; *alba-cornata* with white cup and saucer shaped flowers; *alba grandiflora*, a splendid large white variety; *alba plena*, a double white; *Moerhemi*, a semi-double white variety, and *pallida grandiflora*, a pale blue large-flowered variety. They are all easy of cultivation and thrive in any good, moist garden soil. They are easily propagated by division or seed, excepting the double varieties which must be propagated by division only. No garden should be without several of these varieties as they are indispensable in the hardy garden.

C. pyramidalis. This is commonly called the chim-

ney bellflower and for the decoration of the garden, either outdoors or in, is a plant of the highest possible merit. Whilst it is a perennial, the most vigorous and showy specimens are obtained by treating it as a biennial. For the decoration of the dwelling or the conservatory as a pot plant it is most desirable. To get the best results the plants require good treatment as to soil, etc., for which the grower will be well repaid. It is a tall and vigorous grower, sometimes reaching the height of from 6 to 7 feet. The flowers are blue, but there is also a good white variety. The flowers are produced in great numbers up the long stems and it continues to bloom for two or three months. A batch of seed should be sown every year and the young plants grown on carefully in well prepared, moist, rich soil. If induced to flower at all the first year from seed it is not until the second year that it really does well.

W. H. Waite

✓ Japanese Cypress

It is seldom that a planting of evergreens does not contain one or more of the beautiful Japanese Cypress. It is, however, not surprising, as they contain about all the desirable qualities wanted in an evergreen. The beautiful shades of green, yellow and blue in which they can be obtained, strongly recommend them, not only as specimens, but for group planting. In the latter use they are exceptionally valuable for giving attractive contrasts in color schemes. This genus is known more commonly under the botanical name of *Retinispora*; it is also listed as *Cupressus*, *Thujopsis* and *Chamaecyparis*. If asked to name the most prominent of this group I would give preference to *plumosa*, *pisifera* and *squarrosa*, including their various forms. One feature that recommends them to many is that they can be frequently sheared. This not only encourages a new growth, making the plant more compact, but permits training them into any desired shape.

Plumosa and its golden form *aurea*, are excellent for specimen planting and also for using in groups. The golden type is quite common and is largely used as a specimen plant on lawns where it shows off to good advantage, especially in June when it takes on its new growth which is a very bright yellow. This color is not as pronounced in the winter and the same can be said of all golden colored evergreens. A variety called *plumosa argentea*, is similar to the type in foliage but the ends of the branches are tipped with a silvery white color that gives it an unusual appearance.

Pisifera is of more open type than *plumosa* and resembles in foliage the *arbor-vitae*, its leaves being in flat layers. It is more graceful in outline owing to this loose habit of growth and with its golden form makes a valuable addition to the list.

A species almost as common as *plumosa* is *squarrosa*, with silvery blue foliage that is quite soft and feathery. The color is more pronounced when it makes its new growth but during the winter it changes to a bronze. A variety called *squarrosa Veitchii* is claimed by many to be distinct from the type but the difference, as far as the writer could ever see, is not very great.

A distinct variety is *filifera*, having foliage of thread-like form. These strands are sometimes twelve and fifteen inches in length and give to the plant an exceptionally graceful, drooping habit. The golden form of this type has the same pretty habit as the former and the golden color is an added attraction.

A pretty dwarf type is *ericoides*, resembling *squarrosa* but of finer foliage and more like the heath. In the winter the silver blue color changes to violet red.

One of the prettiest *retinisporas* for green foliage is *obtusa*. Its leaves are a dark green and fern-like in form. Its habit is open and it is a good strong grower of pyramidal habit. The dwarf variety *obtusa nana* and its golden form *aurea* are excellent for dwarf specimens. The Japanese have used these two dwarf types for raising in pots, having trees only a foot or so in height that are hundreds of years old. They are excellent for planting in *jardinieres* and pots. There are other varieties and forms but those mentioned are the ones commonly used.

It is a common complaint that all the varieties, especially those having soft, feathery foliage such as *squarrosa*, etc., have a tendency to die out in spots, destroying their appearance. This is true and the cause in the majority of cases is the lack of care. It is seldom thought necessary to do more than occasionally shear them and mulch as winter approaches. This is all right as far as it goes. One thing that can be noted in a plant that has been treated in this manner is that the continual shearing has induced a strong growth making the plant compact. This compactness naturally causes the inner foliage to die through a lack of light and air. The red spider finds this an excellent refuge. The collecting of this dead foliage also prevents a free circulation of air amongst the branches and saps a certain amount of vitality from the plant.

If the plants are carefully gone over in May and all the dead wood removed, it allows light and air to the centre of the plant and young growth is at once made. As an illustration of such treatment the writer recalls seeing a beautiful specimen of *R. squarrosa* standing fully thirty-five feet high and yet this variety, some contend, never reaches even a fair size. The treatment recommended can be likened to the pruning given all deciduous trees and which is known to be of great benefit. Anyone familiar with fruit raising knows the value of thinning out branches on trees that have made too strong a growth.

Narring Chandler

Some New Plants

Several remarkable new plants were exhibited before the Royal Horticultural Society at their last meeting. The most striking was a *chrysanthemum* named *Winter Cheer*. This name was aptly chosen for one could wish for nothing brighter or more cheering among winter flowers than the rich warm rose coloring of the blooms of this variety. It will most probably become a favorite late market variety for it has all the qualities that go to make a popular flower. Some colors seem to show more brightly on a dull winter's day than when the sun is shining brightly and the same may be said of the warm tints of this flower. The blooms are produced on long stout stems; the foliage is abundant and attractive. Coming so late as it does, being at its best in the middle of January, it is a worthy addition to the list of late flowering *chrysanthemums* of which we have none too many good ones. A silver medal was awarded to a small group of this new variety exhibited by Mr. J. E. Lowe. This group of flowers was one of the brightest displays in the hall on a particularly dull day

and every one agreed that *Winter Cheer* was a praiseworthy novelty and thoroughly deserved its name.

Another new plant shown on the same occasion was *Freesia Chapmanni*, raised by an enthusiastic amateur gardener, Mr. H. F. Chapman. The common *Freesia refracta* is one of our most valuable winter-flowering greenhouse plants. This new *freesia* was raised in 1904 and is the result of a cross between *Freesia refracta alba* and *Freesia aurea*; it partakes largely of the coloring of *aurea*, but is much more robust in growth and also forms larger bulbs. It is more free flowering than *refracta alba*, the average number of blooms on a stem being at least eight. The segments of the flower are primrose colored while the throat is blotched with yellow. The outside of the corolla is yellow, in fact this is the predominating color of the whole flower. The blooms are produced on long and slender stems; in fact the stems are so long that they require a good deal of support. If, however, they were used for decoration when cut this might be rather advantageous than otherwise, especially in those forms of decoration where flowers with long semi-pendant stems are necessary. The exhibitor is to be congratulated upon having raised such a distinct and beautiful flower which may in time become as valuable as *refracta* and its white variety.

The beautiful tobacco plants sent out under the name of *Nicotiana Sanderae* last year caused more discussion than any new plant sent out during recent years. Only the rose-colored variety was sent out last year but this must have had an enormous sale, for it was grown in gardens throughout the country. Many and conflicting opinions were expressed as to its merits but the majority regarded it as a valuable garden plant. This year not only the rose-colored variety, but others in purple shades and in red and white are being distributed. Before *Nicotiana Sanderae* was sent out the only tobacco grown largely in English gardens was the white-flowered, sweet-scented *officinale*; this is one of the most popular hardy plants we have and its popularity is largely due, no doubt, to its powerful fragrance at the close of day. One of the drawbacks to *Nicotiana Sanderae* was its lack of scent. The tobacco seems to have been largely worked upon by the hybridist during the last few years, for now Messrs. Sutton & Sons are offering hybrids of *officinale* that are said to be obtainable in several richly-colored varieties which also are sweetly scented. Thus, while the chief feature of the old *officinale* has not been lost, the flowers have the additional advantage of color.

I should like to draw your attention to a winter flowering cool house plant called *Moschosma riparium*; it is only within the last year or two that this has been generally grown here in English gardens and it has already found many admirers. Plants raised from cuttings, rooted in late spring, form very handsome objects by December. By judiciously stopping the shoots, the plant branches freely and in December bears its elegant arching racemes of small white flowers. The plants last in flower for quite two months, and make a most delightful display in the warm greenhouse. I know of no more effective association under glass at this time of year than a group of *Moschosma* and the rich blue flowers of *Coleus thyrsoides*, another invaluable plant for winter flowering. These plants are not generally known in the United States, they certainly deserve to be.

Henry H. Thomas

London, Eng.

Coelogyne cristata

This beautiful white flower is sometimes described as the most popular of orchids. Whether this is so or not, it certainly deserves all the popularity it enjoys. Unlike many orchids, its appearance is pleasing at all times, even when not in flower. It is very easily grown and is seldom attacked by disease or insects.

The species has several varieties, all of which are worthy of cultivation. The variety Woodlands is a very large substantial flowered variety, but is so rare that a very small piece is considered quite a treasure. Chatsworthii, which is shown in the accompanying picture, is also a fine variety and has larger flowers and pseudo-bulbs than the type. Maxima is simply a large form of cristata. Lemoiniana has a yellow fringed lip, and hololeuca or alba is pure white and looser in habit than cristata.

In summer they should have a cool airy house or frame, the latter preferred providing the plants are raised from the ground and air admitted at the ground level, insuring a circulation of air under and around the plants. They should have a light shade in bright weather, but should have all the diffused light possible. Overhead syringing and

plenty of water while growing and dilute stimulants should be given after root action has commenced.

About September full sunshine should be given with the exception of a few hours in the middle of very bright days, as at this time the pseudo-bulbs begin to mature and the number and size of the flower spikes will be in direct ratio to the amount of light given. This is the most important point in the culture of coelogyne, espe-

cially if the plants are highly fed, as the larger the pseudo-bulb obtained the greater amount of light will be necessary to mature it.

An ordinary greenhouse with a minimum temperature of 50 degrees F., fairly light and airy, will be favorable winter quarters. Just enough water should be given while the plants are in flower to prevent shrivelling. Baskets are more convenient than pans, as the beauty of the flowers is shown to best advantage if the baskets are hung vertically. Best results are obtained from shallow baskets as root aeration is very important.

A suitable compost and a better one than that generally recommended is fibrous loam and sun-dried cow manure as a lower layer, the upper layer to consist of

fibrous loam and fern fibre in equal quantities. They should not be moved or repotted until it is absolutely necessary, as they are somewhat impatient of disturbance and do not flower well the first year after repotting.

If it is desired to hold the flowers back, the retarding process should not commence until the flower spikes appear, as previous to that time it would not be safe to assume that the pseudo-bulb were

mature. In a favorable, cool house the flowers can be held until Easter and as an Easter flower they should be very popular.

COELOGYNE CRISTATA, CHATSWORTH VAR.

James Hutchison

We are compelled to announce, with much regret, that our colored plate of sweet pea did not reach us in time for insertion in this number and its issue is unavoidably postponed until next week.

WM. J. STEWART, Editor and Manager.

**Making good
our promise**

The professional paper or magazine finds its best work in promoting the development, growth and material and intellectual advancement of those in whose behalf it exists. The attitude of the more progressive and intelligent element in any profession towards such a periodical is the best index of its real worth. Reasoning from this standpoint *HORTICULTURE* has reason for rejoicing for, if a willingness to help in the work is any evidence of appreciation and approval, then it has all this in the fullest degree. Men of the highest standing in the profession, highest because of their practical knowledge and intellectual attainments, are found among its regular contributors and more are coming.

**The axe following
the moth pests**

Thousands of cords of wood are being cut in eastern Massachusetts this winter because of the moth pests and the law making destruction of the nests compulsory. In many instances the cost of cleaning thickly wooded tracts which are badly infested would be more than the market value of the land and the destruction of the trees seems the only alternative. Where the forest is only thinned and not completely cleared off the cutting may, in the end, be an advantage but, in any event, it is likely to materially change the character of the New England landscape. This is especially true of cultivated tracts where the picturesque old apple trees which have been such a charming feature of the aspect in spring blossoming time are being demolished on all sides because of the brown-tail invasion.

**Antagonizing the
Agricultural
College**

Again the agitation by the farmers of Amherst, Mass., and vicinity against the sale of produce by the Agricultural College. This time it takes the form of a concerted opposition to the grant by the State Legislature of a

sum of money asked for by the college authorities for needed improvements in buildings and outfit. A legislative committee has been appointed to listen to remonstrants and to make an investigation of the matter. It is, perhaps, preferable that we should await the report of this committee before expressing an opinion regarding the competition in the disposal of produce by the college. But we will venture to say that those interested can safely leave this question to the fairness and sense of justice of those in authority and that retaliation in the form of opposition to a needed appropriation for an institution which has done so much for the soil-tiller will not be looked upon by right-minded and impartial people as a justifiable remedy for either real or imaginary grievances.

**Excluding worthless
varieties from the
exhibition table**

It is very evident in some of the recent correspondence on this subject that the writers are unmindful of the essential dissimilarity in purpose and scope between an exhibition intended to attract and impress the public by the excellence of its displays and a trade show, such as we take the exhibition of the American Carnation Society to be, where the primary object is the comparison of products from a distinctly technical standpoint. To attain the information sought in the latter, the assembling of results of varying processes, whether they be good, bad, or indifferent, is an indispensable condition and the more complete the collection the greater its value to the exhibitor and the visitor, from an educational standpoint. It seems to us that the grower, visiting such an exhibition, contemplating the selection of varieties to be grown for the coming season, would be inclined to demand that a variety seeking recognition should be placed on the tables for his personal inspection and comparison and the greater its inferiority the more important the opportunity. If it is deemed unwise to permit the public to see these things then exclude the public or, after the judging has been completed, make a public show department in which winning exhibits only are set forth. It is proper that the giving of awards be carefully hedged about but the privileges of entry should have as few restrictions as possible. At least this is as it appears to us.

Good Customers

AFTER ADJOURNMENT.

We note with delight the advent of our friend Maurice Fuld into the literary arena. He is represented in the March number of *Suburban Life* by three contributions on seed and bulb planting. In the same number W. N. Craig has an excellent article on "A Gay Garden from Frost to Frost."

We learn from the *Wilmington, Del., Journal* that an esteemed florist of that city has produced a white carnation with pink stripes for which he has refused \$10,000. People shouldn't offer these paltry sums to florists who produce carnations unless they wish to be contemptuously spurned. "Such a headache!"

We learn from one daily paper that Miss Alice's bridal bouquet was comprised of *Phalæopsis amabilis* and furnished by a certain florist; from another daily paper that the bouquet in question was made of *Cœlogyne cristata* furnished by another florist. We take pleasure, however, in presenting a picture of the "real thing" with an account thereof, in this issue.

A valued subscriber in forwarding his dollar for another year, expresses dissatisfaction because we do not record the changing of gardeners from place to place, so that he "can keep up with his old friends." We confess the undertaking is too big for us. Still, we'll do the best we can, and if our gardener friends will kindly let us know when they or their friends make a change we'll gladly print the news.

At a recent meeting of the Massachusetts Horticultural Society the "Fruits of New England" was the subject of discussion. Among other things the acknowledgment was made that there are but half a dozen varieties of pears which can be grown profitably in New England. This is refreshing encouragement as, up to the present time, the prize schedule has been loaded down for 10, these many years, with twenty or more varieties of pears, each drawing out premiums to the amount of from twelve to twenty dollars annually. The half dozen varieties now approved are not stated but probably every one of them has been in the market since before most of us were born. There seems to be a splendid opportunity now for the fruit growers to turn to and produce new varieties of especial excellence for this section. What was possible for their forefathers should not be impossible for them. If they have any desire to see their specialty resume its old time pre-eminence in the society and the community that is the only course for them to pursue.

ALICE ROOSEVELT'S BRIDAL BOUQUET.

This beautiful bouquet, which we illustrate on another page, was made of the choicest orchids with a fringe of *Adiantum Farleyense*. The most delicate shades of *Cattleya Trianae* and *Cymbidium eburneum* were used, the shower effect being carried out with the sprays of the pure white *Cœlogyne cristata*. The *cattleyas* were grown in Washington, D. C., by

the orchid specialist, George Field. The bouquet was designed and made by Z. D. Blackistone.

WHAT THEY SAY OF US.

"The love of praise, however concealed by art,
Reigns more or less, and glows in every heart."

The last few issues of *HORTICULTURE* have been corkers.—A. R. L.

Afraid you will charge more by and by, so now extend our subscription for four years.—O. C.

Please send *HORTICULTURE* on. Will pay for it. Like it very much. Gets better all the time.—S. J.

Congratulations on year's work. May *HORTICULTURE* live long and prosper.
A SUBSCRIBER.

Please find enclosed \$1.00 for my subscription to your paper. It has come to stay, and I wish you every success.—J. G.

Inclosed please find check for three dollars (\$3.00) for which send *HORTICULTURE* for three years from date, January 1, 1906.—W. A.

I think your magazine a grand achievement. Would not be without it. Enclosed please find one dollar for renewal of my subscription.—B. O. C.

I take the pleasure of congratulating you on the able manner *HORTICULTURE* is conducted and wish you every success for the future.—H. T.

Please find inclosed one dollar for renewal of my subscription to your paper for 1906. I like it very much and hope you will continue to make it improve week by week.—J. H. O.

We are anxious to assure you that your magazine is greatly valued in this office for its very interesting contents, and we wish to congratulate you upon the high standard attained.—K. O.

Inclosed find postoffice order for \$1 for another year's subscription for *HORTICULTURE*. I think it is a very valuable paper to the trade and predict a great future for it.—W. S.

I take this opportunity to say that I think your paper the best of them all, and I look forward to the time when I will be settled at a permanent address and can receive it regularly again.—P. A. R.

Horticulture Publishing Co., Boston, Mass.

Gentlemen:—Can you supply me with a complete file of *Horticulture* up to date? Your paper grows more and more valuable and very rapidly. I want to bind and keep the issues intact.
Very truly yours, *

Editor of *HORTICULTURE*—Inclosed please find \$1.00 for *HORTICULTURE* for 1906. I think it improves with age like good old wine, and trust its future will be bright and prosperous and a help to all interested in the gardening world.

Yours truly,

W. S.

SHORT NOTES FROM ABROAD.

The next annual congress and exhibition of the French National Chrysanthemum Society will be held in November at the old town of Caen in Normandy. It is a part of this society's program to hold its annual gathering in a different town every year.

"Le Chrysanthème," the official organ of the French N. C. S., is supplied monthly to its members and usually contains much interesting matter to those who worship at the shrine of the "Queen of Autumn." The last number to hand contains a portrait group of most of the members of the jury at the recent Paris chrysanthemum show and many members of the society. Among the celebrities we notice Rozain-Boucharlat of Lyons Choulet; Maxime de la Rocheterie, the president of the society; Charles Baltet of Troyes; Philippe Rivvire, the secretary; Geo. Bruant of Poitiers; Ernest Calvat, Rosette; Closion of Liege; Colonel Labouchere of Caen.

The English National Chrysanthemum Society has decided to adopt as its standard for color description the repertoire des couleurs recently published by the French sister society. A copy of the work has therefore been handed over to the chairman of the floral committee.

Country Life is one of those excellent English art publications that has a deservedly large circulation. It deals as its title implies with everything more or less connected with the country. Gardens, gentlemen's homes, fishing and sport of all kinds, country cottages and rural views in every conceivable manner are more or less elaborately and artistically dealt with in *Country Life*. A similar work to be published bi-monthly will shortly appear in Paris. It is to be entitled *La vie a la Campagne*, and will be brought out by the well-known French firm of Hachette & Co. Monsieur Albert Maumene, formerly sub-editor of *Le Jardin*, will have the editorial supervision of the new journal.

The National Horticultural Society of France will hold its spring show in Paris on the 19th to the 27th of May next. In connection therewith a Congress will be held on May 21st, at which various questions will be discussed, such as apple culture for table, researches on the coloring matter of flowers, variation in vegetables, cryptogamic diseases that attack ornamental plants, best means to preserve bulbs during the resting period, practical culture of new vegetables, making of small rock gardens and a selection of hardy plants for same, etc., etc.

The next great Quinquennial International Show at Ghent will coincide with the centenary of the Royal Horticultural and Botanical Society. We may reasonably expect this to be the grandest show ever held in this old Belgian town. The list of prizes and schedules is already in print and comprises a large number of classes. The date fixed is 25th of April to the 3rd of May, 1908.

C. HARMAN PAYNE.

NEWS OF THE CLUBS AND SOCIETIES.

NORTH SHORE HORTICULTURAL SOCIETY BANQUET.

It was a great turnout at Manchester-by-the-Sea on the evening of February 15. The youth and beauty, the talent and experience of the old north shore, together with twenty visitors from Boston—a happy throng of two hundred and fifty—sat down to the annual spread of this wide-awake society. The tables were profusely decked with flowers and the platform was banked with the choicest products of the greenhouse.

After the excellent repast had been put out of sight President James Macgregor called to order and introduced Rev. W. F. Powers who made a scholarly address on the mysteries of plant life, the noble part played by sentiment in human life and the civilizing influences of the gardeners' occupation.

James B. Dow then gave a brief history of the society which, although but five years old, already numbers 160 members. Twenty-four practical subjects had been discussed at the meetings of the past year and the organization was making its influence felt throughout the community.

Rev. E. H. Brewster spoke of the beauties of Manchester and the interest her people take in the development of horticulture. He elicited a storm of applause when he asserted that the attributes of the true gardener are a love for the beautiful as exemplified in ladies and flowers, love for the mysterious and love for the good.

James Farquhar was next called upon to tell some of his experiences in a recent visit to Porto Rico, which he did in most entertaining style. He spoke of the equable temperature of the island, its wealth of tropical vegetation, its delightful fruits, its fertile soil, its simple people, and claimed that it is destined to become the winter home of the affluent American citizen.

J. W. Duncan spoke on behalf of the Boston visitors telling appreciatively of the elegant products of the expert gardeners of Manchester, Beverly, Prides Crossing and vicinity that the visitors had been privileged to see during the day.

James Wheeler, president of the Gardeners' and Florists' Club of Boston, also spoke in a similar vein, congratulating the sister society on the grand work it has done and is doing and referring eloquently to the natural beauty and inspiring surroundings of Manchester and the hospitality of the gardeners.

Between the speeches an excellent vocal and instrumental program was rendered by Miss Carolyn E. Allen, Rev. C. A. Lincoln, Miss Harriett Brewster, Mr. Fish, Allen S. Peabody and the High School orchestra. The hall was then cleared for dancing, and under the direction of L. W. Carter tripped "the light fantastic" till the close.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

There must have been close to one hundred and fifty members present at the club meeting in Horticultural Hall on Tuesday evening, February 20. The special attraction was a paper by Robert Cameron of the Harvard Botanic Garden, giving some of his impressions of the West Indies, he having recently returned from quite an extended botanizing tour of that region. He gave a most interesting synopsis of the floricultural wealth he had been privileged to see, the beauties of the tropical jungle which are within less than a week's travel from the frozen regions of the north. The climate he had found neither hot nor unhealthy and the inhabitants are in some respects more civilized than our own people, there are no fierce wild animals and some small insects are the only troublesome thing. He told graphically of Trinidad, its Botanical Garden, its agricultural and horticultural industries, Granada and its fruits, Venezuela, Panama and Colon, Jamaica, which he characterized as the most delightful of the West India islands, and Cuba with its fertile expanses and splendid openings for ambitious palm growers or market gardeners. After the address he was plied with many questions which elicited the statement that the so-called double flowered poinsettia was the most impressive object in the floral line that he had seen. He recommended it strongly for greenhouse culture in preference to the common form. He had visited R. M. Grey who is established in Cuba as representing Mr. Ames in some extensive agricultural and botanical research and experimenting. James Farquhar, being called upon to answer some queries regarding Porto Rico, spoke of it as pre-eminent among the West Indies in its fruit products which brought Mr. Cameron to the floor again in defense of Cuba and Jamaica and much merriment was created by the witty sallies that for a time passed between these gentlemen.

Among the items of the evening were the admission of twelve new members, a song by Mr. Cannell, an abortive attempt by George M. Anderson to have the vote passed at the last meeting admitting ladies to membership, declared illegal and the usual recess lunch. On the exhibition table were a fine plant of *Dendrobium nobile* from Robert Marshall, carnation Red Warrior from George B. Anderson, samples of fine tea roses grafted on Mannetti from the Montrose Greenhouses, a purplish sport of carnation Harlowarden from Mrs. J. P. Snow, a red seedling carnation from John Murchie of Sharon, Pa., which arrived in sleepy condition and a specimen of *Nephrolepis Whitmanii* from H. H. Barrows & Son, which Secretary Craig pronounced the best fern, without exception, in existence today. A box of new sweet peas expected from A. C. Zvolanek failed to arrive. Wm. Sim told of a recent visit to Mr. Zvolanek's and the many promising new varieties to be seen there.

NATIONAL COUNCIL OF HORTICULTURE.

The second called meeting of the National Council of Horticulture convened at the Auditorium Annex, Chicago, February 5, 1906. There were present, Prof. W. W. Tracy, of Washington, D. C.; Professor S. B. Green, of Minnesota; C. E. Kendel, of Cleveland, Ohio; L. A. Goodman, of Kansas City; H. C. Irish, of St. Louis; C. C. Simmons, P. J. Hauswirth and J. C. Vaughan. Telegrams or letters were received from the following: J. H. McFarland, Prof. E. J. Wickson, Prof. L. R. Taft, Prof. L. H. Bailey, Prof. John Craig, Philip Breitmeyer and J. H. Dayton.

The plan outlined at Cleveland for securing funds from florists, nurserymen and seedmen showed \$210 in the treasury for promotion of trial work of the Bureau of Publicity. The methods for carrying out the plans arranged at Cleveland were discussed and definite propositions read by D. J. Thomas and J. H. Burdette of Chicago, giving their views as to the best methods of securing high class newspaper publicity for the Council. Subjects for preliminary articles were discussed, and many suggestions given to the secretary, with instruction to take up the matter with Messrs. Thomas and Burdette and arrange for sending out the preliminary articles to such an extent as the funds in hand would provide for.

It was conceded that material on general subjects coming from a national body covering broad lines and from all parts of the country and bearing no evidence of commercialism, would be eagerly accepted through our own or other press bureaus by hundreds or even thousands of the best newspapers in all part of the country. It is believed that this part of the Council work can be placed on a self-supporting basis.

There being a vacancy of one member in the delegates at large of the National Council, Professor S. A. Beach of the Iowa State College of Agriculture was appointed.

It was voted to invite the Secretary of Agriculture to appoint two delegates from the United States Department of Agriculture to become a part of the Council on a similar basis as are the delegates from the national societies of the florists, nurserymen, and seedmen.

Warren H. Manning, landscape designer of the Jamestown Exposition, asked for the advice and assistance of the Council in his work at the Exposition, and asked the Council to suggest names for committees to aid him on the following sections of the Exposition work in horticulture: Classification, Awards, Standards of Excellence. Call for National Congress, Special Events and Programs. These appointments were made as requested, and the secretary instructed to submit same to Mr. Manning for his approval.

H. C. IRISH, Secretary.

NEWPORT HORTICULTURAL SOCIETY.

A regular meeting of the Newport Horticultural Society was held Tuesday evening last, President Alex. MacLellan in the chair. There was a large attendance, and much interest was taken in the proceedings. The secretary read a communication from Messrs. Schlegel & Fottler of Boston, offering \$25 in gold in premiums for a collection of annuals and a collection of vegetables to be competed for at the August exhibition. The offer was thankfully accepted. The premium offered for annuals was the means of starting a most interesting discussion on the term annuals as applied to plants, Joseph Gibson desiring a rule to be made for the guidance of both exhibitors and judges, to save the former from being disqualified, and the latter from the disagreeable duty of disqualifying exhibits having among them perennials.

The discussion disclosed the fact that even good gardeners are divided as to what constitutes an annual, some claiming that only such things as are grown from seed and mature and die the same year, are annuals, while others claimed that climate influenced plants in such a way that many things, such as salvias, are commonly termed annuals, although they by no means end their existence within the space of one year. The question was finally disposed of by referring it to the Executive Committee.

Mr. MacLellan was sent as a delegate to Providence to represent the society at a meeting of the society for rural improvement.

NEWPORT NOTES

The unusually mild winter had the effect of starting grape vines under glass to break before the regular time this year, some gardeners being compelled to water the borders and keep the vines going ahead fully three weeks earlier than usual. Peaches and nectarines are in much the same condition.

James McLeish is turning a gros. Colman house into a nectarine house. Colmans were a financial failure with him, while on the other hand he finds that nectarines are invariably a paying crop.

Outsiders are inquiring about the Newport Pink Hollyhock, asking if there is any difference between it and the regular good double pink hollyhock. There is this difference: That the best double pink hollyhock is the Newport pink, and while it is by no means an exclusive Newport thing now, still the pink grown here and so much admired was not seen elsewhere until quite recently.

Notwithstanding that much preparatory work was accomplished all through this winter that usually would have been put off until spring, there is unusual activity apparent in gardening matters which promises to make a lively spring with plenty for all to do.

MORRIS CO. (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

The second regular meeting of the year was held at the old stand in Madison, Feb. 14. C. H. Totty's paper on "The New Chrysanthemums" was the principal event. After it was read Mr. Totty invited discussion and criticism. Messrs. Herrington, Heere-

mans and Vince threshed it around awhile, but it came out unscathed.

Six new members were elected: Harold Vyse, Henry Heeremans, William Inglis, Thomas Stokes, Herbert Entwistle and Lincoln Pierson. More new members, more new ideas, more progress.

It was decided to make the next meeting a carnation night, and Mr. Vince has promised a paper on the carnation. Also to hold the fall show on Nov. 1 and 2. This will give our boys a chance to get in on the ground floor, and outsiders as well, for we like competition at that.

E. REAGAN.

LENOX HORTICULTURAL SOCIETY.

The twelfth annual banquet of this society was given in Town hall, February 17. Seventy-six sat down to an excellent repast, at tables decorated with cut flowers, cyclamens and well-colored plants of *Pandanus Veitchii* and *dracenas*. President Carlquist introduced A. H. Wingett as toastmaster, who filled the position in his usual affable manner. The toasts and those who responded, are as follows: "The Horticultural Society," E. J. Norman, first president, and E. Jenkins, president in 1904; "The Town of Lenox," R. Stanley, chairman of board of selectmen; "Florists," F. Howard, Pittsfield; "Cottagers," Eustaec Jacques; "The Press," W. Harger; "The Ladies," J. Johnson; "Our Toastmaster," President Carlquist. A. McConnachie, C. R. Russell, H. Jack and Thomas Page entertained the company between the speeches. Letters were read from the judges for the past year, whose absence was regretted by all. Preceding the supper a brief business session was held.

The next meeting, March 3, is carnation night. The society respectfully solicits some of the new varieties for exhibition, for the benefit of those who were unable to attend the Boston exhibition. Kindly forward same to George Foulsham, Secretary, Lenox, Mass., not later than Saturday, March 3d.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.**Department of Plant Registration.**

Hoopes, Brother & Thomas, West Chester, Pa., submit for registration, two new roses named and described as follows:

Christine Wright (*Wichuraiana* X *Mme. Caroline Testout*). Hardy climber. Flowers pink, almost double, 4 inches in diameter, borne in clusters. Foliage large and thick.

Columbia (*Wichuraiana* X *Mme. Caroline Testout*). Hardy climber. Flowers salmon pink, semi-double, borne singly on long stems, 4 to 5 inches in diameter, sweet-scented. Foliage shiny.

WILLIAM J. STEWART, Sec.

OMAHA FLORISTS' CLUB.

At the last meeting it was decided to hold the flower show on November 12-17, and to offer \$5000 in premiums. About one-half of this amount has already been subscribed.

W. J. & M. S. Vesey, of Ft. Wayne, Ind., displayed a fine vase of variegated carnations.

DES MOINES FLORISTS' CLUB.

The meeting on February 6 at John Lambert's greenhouses was well attended, due perhaps to the fact that secretary notified all members by postcard at the last minute. Mr. F. Marshall brought a handsome bunch of his seedling carnations among which two dark crimsons, a white and two reds deserve special mention. Messrs. Peter Lambert, F. Stevens and Charles McAniff were appointed a committee to visit Mr. Marshall's greenhouses, and they report that the crimsons are clean, robust plants, free and continuous bloomers. This can be said of several other varieties in his house.

Wesley Greene was present and spoke of the plans of the State Fair Association for the furtherance of horticulture at the State fair this fall. He extended an invitation to the club to hold its next meeting on February 20 at the State Capitol, which was accepted.

Charles Simons was requested to prepare a paper on Methods of germinating small seeds to be read at the next meeting, and Frank Stevens a paper on Growing Boston ferns for the first meeting in March.

A box of Glendale carnations from Mrs. Vesey of Ft. Wayne, evidently intended for the club meeting, came a day too late, but they were exhibited at the Iowa Seed Co.'s store and the club members were notified. It is a grand variety, and will be reported on at the next meeting.

WILLIAM TRILLOW.

ROYAL HORTICULTURAL SOCIETY SCHEDULE.

The book of arrangements of the Royal Horticultural Society of London, is just to hand. Among the most important we notice during 1906 the following: 13 February, annual general meeting; 22, 23 and 24 March, show of Colonial-grown fruit and vegetables; 17 April, auricula and primula show; 29, 30 and 31 May, the R. H. S. great flower show in the Temple Gardens; 6 and 7 June, show of Colonial-grown fruits and vegetables; 5 July, Sweet Pea Society show; 10 and 11 July, R. H. S. great summer show at Holland House, Kensington; 30 and 31 July, 1, 2 and 3 August, International conference on plant breeding; 19 September, National Rose Society show; 16 and 17 October, R. H. S. 13th annual show of British-grown fruits; 4 and 5 December, show of Colonial-grown fruits and vegetables (bottled and preserved); 13 and 14 December, National Potato Society show. Most of these shows will be held in the Society's hall at Westminster.

ELBERON HORTICULTURAL SOCIETY.

A meeting of the Elberon, N. J., Horticultural Society was held on Feb. 19th. There was a large attendance. The principal business of the evening was the discussion of the schedule for the flower show, to be held during the coming summer.

W. F. Ross, representing F. R. Pierson Co., Tarrytown, was present and exhibited a splendid vase of their new carnation Winsor, which was admired by all, and a certificate of merit was awarded.

LIBRARY NOTES

A few months ago I contributed an article bearing the above title to HORTICULTURE, and in order to keep the book-loving American horticulturist fully posted up to date in matters of bibliographical interest, it may be useful and instructive to place on record in these columns some of the most important facts that have occurred since.

Among the recent additions to art literature must be mentioned by way of special commendation, "The Italian Lakes," painted by Ella Du Cane, and described by Richard Bagot. Although not strictly a gardening book yet it contains so many charming little reproductions of water color sketches of Italian lake gardens, that it is well worthy of a place on the bookshelves of every literary gardener, and especially those who have wandered through the gardens of Northern Italy in and around the district of Lakes Como and Maggiore. Less than two years ago the writer of the present article after visiting the great International Horticultural Show at Turin, the gardens of Stupinigi, and the horticultural sights of the vicinity of Milan found himself exploring amongst other famous gardens the world-renowned island terraced garden of Isola Bella. The work now under notice brings back vivid memories of a pleasant tour in the sunny land of Italy, in a way that couldn't be otherwise provided. The printing and binding of "The Italian Lakes" are executed in the best style, but we are chiefly concerned at present with the little horticultural gems that the book contains. In all there are 68 colored reproductions of Miss Ella du Cane's work, and the titles of a few will amply justify our commendation from a horticulturist's point of view. "A Garden at Cadenabbia" which depicts flowers in the foreground and a vista across Lake Como to the mountains beyond. "Azaleas" is a bright realistic view of these showy flowers as we have often seen them on the slopes of an Italian lake garden. "Pallanza from Isola Bella" gives a typical view from one of the Terraces of that island garden. "Oleanders" also very bright and effective. "A villa garden Lago d'Orta," and "Terrace Isola Bella" appeal very strongly to those who have visited the spot, the latter picture showing the stonework and balustrading of the terrace with flower pots arranged at intervals. Among the many other peculiarly fascinating little bits we can only briefly cite: "A Garden," "Hydrangeas Isola Bella," "Oleanders Lago d'Orta," "A Terrace Wall, Lago Maggiore," "A doorway at Varenna," in which crimson pelargoniums in pots are most vividly represented. "A group of Yuccas" all in full flower by the edge of the lake, "Villa Carlotta" a lovely little bit of color bordering a gravel path leading down to the lake, and the mountains in the far distance. Among others "Roses Villa Carlotta," "In the garden of the Villa Arconati," "In the Shadow of the Terrace," "A Balcony," "A garden at Baveno," "Isola Pescatori," with Yuccas in the foreground, and "In the garden Isola Bella" must conclude our very superficial notice of a most attractive work. Messrs. A.

& C. Black of London are the publishers.

From the same firm comes another beautifully executed work of similar style. This is an art edition of "The Garden That I Love," by Alfred Austin. The illustrations in this are reproductions from water color sketches by George S. Elgood, who, it will be remembered, was the artist that illustrated that handsome folio, "Some English Gardens." The frontispiece bears the same title as the book, it is a delightful view of a gabled country manor, house ivy-clad and partly screened by a gorgeous border filled with flowering plants in great profusion, a dear old home where peace and happiness must surely reign supreme. We specially admire "Apple Blossom" and "The Seat Beneath the Oak," for their suggestion of calm repose. "Orange Lily and Monkshood" is a nice little picture and of similar character. "The careless grace of Autumn," "Larkspur and Meadowrue" needs no description for its title tells its tale. The same may be said of "Crimson Rambler," "Peonies and Iris" which is very bright and telling, "Torch Lily" and "Evening Primrose." There are others but we must refer the reader to the book itself for further information.

The writer is indebted to M. Philippe de Vilmorin for a copy of his recent work the "Hortus Vilmorinianus" a bulky volume of nearly 400 pages containing an enumeration of the ligneous and herbaceous plants cultivated in the garden of M. Ph. de Vilmorin and in the grounds of his firm Messrs. Vilmorin, Andrieux & Co. at Verrieres-le-Buisson. There is a preface by Professor Ch. Flahault and a large number of illustrations in black and white adorn the work which is executed in first class style. An index of the genera is given at the end.

In periodical literature relating to the gardening art the post of honor must be accorded to the recently issued volume of the Journal of the Royal Horticultural Society of London. This contains about 500 pages and although only Part 4 of Vol. XXIX, comprises an immense amount of scientific and practical knowledge contributed by various fellows of the Society. Even a brief epitome of its contents is practically impossible in a series of notes such as these.

Another work that reaches us with unfailing regularity is the Journal of the Japanese Horticultural Society. In spite of the events in the far east the society has made great improvements of late in this publication and the numbers issued during the past year have been characterized by a new departure in artistic design and get-up generally. It is unfortunate that it is printed wholly in the Japanese vernacular with the exception of an index which is in French, thus giving the recipient an opportunity of getting an article translated if he so desires. The last number to hand contains several quaintly executed illustrations some of which remind us of the style of a

French artist, Grevin, popular in Paris a quarter of a century ago. Many of the articles in the issue before us are about the chrysanthemum.

From a purely bibliographical standpoint the Journal of the National Horticultural Society of France for the month of November last must unquestionably be the subject of a short mention. In it M. George Gibault, the librarian of the society, contributes an article entitled, "Ancient Horticultural Bibliography and Literature," a work of supreme interest to the literary gardener or horticultural book collector. M. Gibault's researches cover 32 pages of the Journal and are illustrated with reproductions of the title pages of some of the rare books, mostly French, with which he deals. His work is divided into headings, such as the books of antiquity and the middle ages, 16th century iconographies, 17th and 18th century iconographies, Maison's Rustiques general treatises, works on fruit culture, works on floriculture and kitchen gardens, works on the art of gardens, old botanical and horticultural catalogues, poetry and horticultural travels. It is, in fact, one of the most comprehensive and exhaustive accounts of garden bibliography of its kind we know of, and of infinite value not only to the student of the history and literature of the garden craft, but also to the mere book collector.

Periodical literature has lost one of its organs. "Flora and Sylva" has ceased to appear as a monthly publication, in spite of its excellence and great cost incurred in its production. A new one of far less pretentious style has, however, appeared this month, called "The Garden Album and Review," edited by John Weathers. This is described as an illustrated monthly magazine of horticulture, and each number besides containing 16 pages of literary matter, will have four colored plates. It is a work not wholly unlike the old "Florist and Pomologist" in appearance.

We have several promises of new undertakings, one of which, "The Art of Italian Garden Design," by Mr. Migo Triggs, will be a handsome and costly book executed in high-class style. From Paris we learn that a new bi-monthly, entitled "La Vie a la Campagne," edited by M. Albert Mau-mene, the famous French writer on the floral art, will shortly be published and be devoted to gardening and other rural subjects. Its English prototype, "Country Life," is already well known as a finely executed work on such matters as come within the scope of its title.

The Book of Cut Flowers, by R. P. Brotherston. (London, T. N. Foulis). There have been in times past a few little treatises dealing with the art of floral arrangement, but the work now under notice is beyond dispute the most important and the most comprehensive in English that we know of. It is a volume of close on 300 pages, bound in cloth covers, very well printed in clear type and illustrated very

Dreer's Select Sweet Peas

FOR FLORISTS

The following is a short list of the very finest sorts for cutting. No use growing poor varieties when the best costs no more. For complete list see our catalogue.

SWEET PEAS

	¼ lb.	Lb.
Blanche Burpee , large white.....	\$0.10	\$0.25
Blanche Ferry , extra early; pink and white.....	.10	.25
Countess of Radnor , delicate lavender.....	.10	.25
Countess Spencer , new orchid-flowering, clear....		
pink shading darker at the edges.....	.30	1.00
Dorothy Eckford , the finest white.....	.15	.40
Earliest of All , re-selected. Same color as Blanche Ferry, but a week earlier than the extra early type.....	.10	.30
Emily Henderson , purest white, early and free....	.10	.25
Gladys Unwin , new orchid-flowering, of very large size. A charming shade of pale rosy pink, extra fine.....	oz. 50c.	1.50
Hon. F. Bouverie , one of the best pinks.....	.10	.25
Hon. Mrs. E. Kenyon , the finest primrose yellow.....	.10	.25
Janet Scott , a large and bright pink.....	.15	.40
King Edward VII , rich deep crimson scarlet.....	.15	.50
Lady Grisel Hamilton , pale lavender.....	.10	.30
Lovely , shell pink, extra fine.....	.10	.25
Miss Willmott , rich deep orange pink.....	.10	.30
Mont Blanc , best early flowering white.....	.10	.30
Mrs. Walter Wright , deep mauve.....	.15	.50
Prima Donna , deep pink, fine.....	.10	.25
Prince of Wales , deep rose.....	.10	.25
Salopian , a grand deep scarlet.....	.10	.25

NOW IS THE TIME to sow Asters, Centaureas, Cobaea, Dracena, Lobelia, Petunia, Salvia, Stocks, Verbenas, etc., etc. Our strains of all florist flowers are unequaled for quality.

HENRY A. DREER - Philadelphia, Pa.

Sweet Pea Gladys Unwin

freely, the majority of the pictures being photogravure full paged plates of artistically arranged floral groups in vases, the style of which reminds us somewhat of that American work, "The Flower Beautiful," by Clarence Moores Weed. The book is divided into two parts and has the addition of several appendices. The first part contains ten chapters, the subjects of which are roughly outlined as follows: Historical retrospect, relative value of flowers, fashion, national tastes, selection of colors, scent, form, buds, foliage, selection of material, when to gather flowers, how to gather, packing flowers, decoration of apartments, receptacles, floral aids, methods of arranging, contrasts, harmonies, etc., table decorations, church decorations, personal adornment, ball decorations, decking graves.

In the second part, which is comprised of eight chapters, there are such things dealt with as annuals and biennials, hardy perennials, herbaceous fibrous rooted plants, tender exotics, shrubs, trees, everlasting flowers, grasses, ferns, orchids and the like. The author also deals in a measure with the art of floral arrangement as practised in Japan and gives a final chapter on the literature dealing with floral decorations, mention being made of books not only in English but also in French and German.

A book of this kind which the author says on his title page is a complete guide to the preparing, arranging and preserving of flowers for decorative purposes is by no means a superfluity for the way in which some exhibitors at English shows dump their flowers into vases, baskets and epergnes and

think they have arranged them artistically is notorious to any one who has seen the same kind of thing done in France. But beside exhibitors at shows there is much to be learned from the book of Cut Flowers by those whose duty and pleasure it is to arrange flowers in the home. Various forms of receptacles are shown as being suitable for certain purposes and the finished picture in photogravure from a real arrangement of natural flowers is one of the many object lessons furnished by this excellent treatise.

The Sweet Pea Annual, 1906. (Horace I. Wright, Hon. Sec. National Sweet Pea Society, London.) The sweet pea is perhaps no less appreciated in America than in England and it may therefore be useful to draw attention in the columns of HORTICULTURE to this new publication which very far surpasses the issue of last year. For the modest sum of one shilling it is about as good value for the money as anything of the kind we know and to a sweet pea enthusiast must have a special charm. Well printed, freely illustrated with the portraits of celebrities, with views of sweet peas growing at Wem and in the States, and also with representations of some of the leading silver cups offered for prizes at the National Sweet Pea Society's shows. It contains 80 pages of literary matter bound in stiff covers and forms a most attractive little volume. The frontispiece is a portrait of Mr. Alfred Watkins, the present president of the society, former presidents, viz., Mr. Percy Waterer, Mr. Henry Eckford and Mr. George Gordon being also included.

The articles are numerous, portraits of most of the authors being given. A few headings may in a brief way give an idea of the scope of this new annual, viz., Fungoid diseases of the sweet pea, by George Massee; Sweet pea novelties of 1905, by T. A. Weston; Sweet peas in decoration, by George Gordon; Sweet peas in California, by Lester L. Morse; Cross fertilization of the sweet pea, by J. W. Dawson; The popularity and many virtues of the sweet pea, by A. N. Dickson; The Countess Spencer type, by Silas Cole, and many others.

GRASSES FOR PASTURE AND FORAGE.

J. Otto Thilow of H. A. Dreer, Inc., read a valuable paper on the above subject at the Philadelphia Farmers' Institute on Jan. 16. The following lists of best grasses for various purposes as given by him will be found useful:

For Meadows and Low, Moist Ground.

Kentucky Blue (*Poa pratensis*).
Rough Stalked Meadow (*Poa trivialis*).
Red Top or Herd Grass (*Agrostis vulgaris*).
Creeping Bent (*Agrostis stolonifera*).
Tall Meadow Oat (*Arrhenatherum avenaceum*).
Tall Meadow Fescue (*Festuca elatior*).
English Perennial Rye (*Lolium perenne*).
Meadow Foxtail (*Alopecurus pratensis*).
Orchard Grass (*Dactylis glomerata*).
Sweet vernal (*Anthoxanthum odoratum*).
Alsike and White Clover.

For Heavy and Rich Uplands.

Kentucky Blue (*Poa pratensis*).
Canadian Blue (*Poa compressa*).
Rhode Island Bent (*Agrostis canina*).
Sheep's Fescue (*Festuca ovina*).
Perennial Rye (*Lolium perenne*).
Meadow Foxtail (*Alopecurus pratensis*).
Orchard Grass (*Dactylis glomerata*).
Crested Dogtail (*Cynosurus cristatus*).
Meadow Fescue (*Festuca pratensis*).
Red Clover (*Trifolium pratense*).
Alsike (*Trifolium hybridum*).
White (*Trifolium repens*).

On Dry, Poor Lands and Elevations.

Canadian Blue (*Poa pratensis*).
Creeping Bent (*Agrostis stolonifera*).
Hard Fescue (*Festuca duriuscula*).
Red Fescue (*Festuca rubra*).
Sheep's Fescue (*Festuca ovina*).
Brome (*Bromus inermis*).
Orchard Grass (*Dactylis glomerata*).
White Clover (*Trifolium repens*).
Red Clover (*Trifolium pratense*).

For Shade.

Wood Meadow (*Poa nemoralis*).
Kentucky Blue (*Poa pratensis*).
Crested Dogtail (*Cynosurus cristatus*).
Red Fescue (*Festuca rubra*).
Orchard Grass (*Dactylis glomerata*).
White Clover (*Trifolium repens*).

For Hay in Rotation of Other Crops.

Timothy (*Phleum pratense*).
Millet.
Hungarian Grass.
Italian Rye (*Lolium italicum*).
Red Clover.
Alsike Clover.

For Hay in Meadows, Permanent.

Kentucky Blue.
Red Top or Herd.
Tall Meadow Fescue.
Tall Meadow Oat.
Meadow Foxtail.
Timothy.
Alsike Clover.
Red Clover.

For Soiling.

Italian Rye Grass.
Millets.
Hungarian Grass.
Clover and Peas.

For Binding Banks.

Canadian Blue.
Rhode Island Bent.
Creeping Bent.
Red Fescue.
Awnless Brome.
Sheep's Fescue.

TEST OF 1905 SEED NOVELTIES.

(Translated from "Gartenflora" by G. B.)
(Continued.)

Senecio clivorum—Large broad leaves, reminding of Tussilago; has not yet flowered; perennial.

Senecio tanguticum—Has still more beautiful leaves, lying close to the ground; report of flowering next year.

Aquilegia vulg. compacta rosea fl. pl. Report next year; has not flowered.

Althea hybr. semperflorens fl. pl.—A double variety with an endless flower crop all through summer, in all known colors of the altheas; a few single amongst them; seed should be sown in March; very good.

Isota glauca—A 12-inch-high perennial with ash gray leaves; flowers lemon-yellow; good for large bouquets. In conclusion, we name some old favorites, which we tested again and which are likely to become again useful, although very little in culture at present:

Chrysanthemum coronarium luteum and album—A good grouping plant; when raised from cuttings will not grow too rank. Flowers yellow and also white; largely cultivated lately in Sanssouci by Potsdam.

Leucanthemum uliginosum—Perennial, over 3 feet high; if sown early will flower the first year; flowers white.

Eupatorium ageratoides—Myrtle-like foliage, white flowers; good fall and winter bloomer.

Mimulus tigrinus gr. fl. and nanus.—Good for grouping.

Tagetes lucida—Good for bouquets; flowers in small yellow clusters.

Trachelium coeruleum, also album—Good summer plant; lilac and white; fine for groups.

Saponaria multiflora and *S. multiflora alba*—Better than silenes out of doors; long flowering period.

Oenothera fruticosa major—Perennial with shining yellow flowers.

Uniola latifolia—Bamboo-like perennial ornamental grass.

Rehmannia angulata—A very nice herbaceous plant, with some rose flowers the first year; similar to martynia; small, robust, serrated leaves, lying close to the ground; very good.

SEED TRADE NOTES.

W. C. Langbridge says we were altogether too conservative in our estimate of the attendance at the Canners' convention. There were nearer 1400 than 700 in attendance. Also that we omitted to mention Theodore Cobb of D. M. Ferry Co. as present—an important omission, as he was reported to have been taking in big orders. Mr. Langbridge thinks he can beat that 3000 bushel tale, as he got one order for 6000 bushels of Alaska.

CATALOGUES RECEIVED.

Hoopes, Brother & Thomas, West Chester, Pa. Semi-annual trade list.
John H. Dunlop, Toronto, Ont. Wholesale catalogue of roses, carnations, etc.

Holton & Hunkel Co., Milwaukee, Wis. Florists' Reference Book. Illustrated trade list of florists' supplies, plants, etc.

Tree and Shrub Seeds. Otto Katzenstein & Co., Atlanta, Ga. Much more than a catalogue, this publication with its handsome arboreal views and sound advice on tree topics deserves a place in every rural home on the continent.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

CONRAD APPEL'S GRASS SEED REPORT FOR JANUARY.

Regarding the crop results of grass seeds, several sorts, such as the home grown (German) *Agrostis*, *Poa trivialis* and *Poa nemoralis* had a smaller yield than last year. *Aira caespitosa* and *Aira flexuosa* and especially *Alopecurus pratensis* had a poor crop only; the latter has become very scarce now and is very dear consequently. *Avena elatior*, but especially *Anthoxanthum odoratum*, true, offer at low figures in good qualities. This refers as well to *Cynosurus cristatus*, whereas *Dactylis glomerata* has a small crop only. *Festuca ovina* had a smaller result than last year, also the other *Festuca* sorts, which therefore sell at higher prices. The *Bromus* varieties, also *Holcus lanatus* are obtainable in good qualities at moderate figures. *Lolium perenne* and *italicum* had good results and are not too dear.

Just to touch the crop results of the several clover seeds, there is but little red clover raised in the Palatinate. Austria has a medium crop, Russia is not in the market owing to the unsettled conditions, and from France and Italy, which as a rule take an active part in the trade, arrivals are missing. Lucerne has suffered in quality during the harvest by unfavorable weather. Superior grades of Provence seed are scarce and have consequently gone up in price. White clover a small crop, but stocks of yearling seed will not allow the prices to rise. Alsike scarce and in good demand. Sainfoin, one and two cuts, have started with moderate prices, although the yield is not a large one.

Of the several other agricultural seeds, *Seradella*, Lupins, Vetches, Peas and Mustard seed have partly suffered by rain, and at present medium qualities are only offered. Better grades will be in good demand and will consequently be dear.

VEGETABLE GROWING.

A general discussion on the subject of Vegetable Growing was held at Horticultural Hall, Boston, on Saturday, Feb. 3, in place of the customary lecture.

The discussion was opened by Hon. Warren W. Rawson of Arlington who presented an interesting and practical address on the subject. He said that the necessary requirements for growing good vegetables are proper soil, good seed, thorough cultivation, and careful attention. The soil for most vegetables should be of a sandy nature with a good subsoil for drainage. A soil of this nature is especially adapted to such crops as lettuce, spinach, radishes, cucumbers, beets, parsnips, rhubarb, parsnips, peas, beans, celery, tomatoes and early cabbages, while a heavier soil with clay is best for such crops as onions, cabbages, early celery and summer corn. The light, sandy soil can be cultivated much earlier than the heavy soils and will produce two or three crops each season with the same soil in most cases. He recommended a soil of this nature for the best results.

ROBERT CRAIG

The Best **SCARLET** ever offered to the trade.

We can make immediate delivery of rooted cuttings of the above variety.

\$12.00 per 100. \$100 per 1,000.

J. D. Thompson Carnation Co., Joliet, Ill.

of 20 to 30 cords to the acre, and that stable manure has proved to be a complete manure, but if a second crop is to be grown on the same land an additional ton of some special fertilizer suitable to that crop is often necessary. But after all the growing of all crops depends more on the man than anything else.

In the course of the discussion which followed his opening remarks, in reply to a question, Mr. Rawson stated that he had found the arc electric light beneficial in the growing of lettuce under glass and that he was now experimenting with the application of a current of electricity in the soil which promises to be of still greater benefit. He said if any one doubted the effect of electricity on the growing crops under glass he would be glad to have them see two of his lettuce houses, one of which was treated with electrical appliances and the other without them. The difference in the result was very marked in favor of the electrically treated crop. He was still in the experimental stage on this subject and hoped in the course of a year to report the results more fully.

Referring to the matter of the sterilization of the soil he said that after the experience of eight years he had found it more successful and satisfactory; in fact, it was the best thing he ever did in the greenhouse line and the most profitable.

In answer to another question he said that the trouble with most farms is the lack of proper treatment. The soil was not worked enough. He advised one ploughing in the fall followed by two more in the spring.

INTERNATIONAL EXHIBITION.

Translated from "Gartenflora," Berlin, by G. B.

The city of Mannheim, Germany, is planning an International Art and Horticulture Exhibition, the cost of which is estimated at \$200,000. The management of the Horticulture Exhibition is intrusted to Prof. Max Lauger, Karlsruhe, and the Art Exhibition to Prof. Ludwig Dill. From city funds \$12,000 are promised, while from private parties a guarantee fund of \$80,000 has already been given. About \$25,000 of the fund is to be used to buy pieces of art from exhibitors. How much money is put aside for horticultural purchases is not disclosed.

We are sorry to learn that Joseph A. Manda, of South Orange, N. J., is sick with typhoid fever.

PHILADELPHIA NOTES.

Herman Anhauser of Lansdowne had a fire on the morning of the 16th. Started in the boiler shed. Damage \$50. Might have been worse except for the strenuous efforts of William J. Muth, a Philadelphia wholesaler, who got on the roof and worked like a real fireman. Unfortunately the roof had a slant with plenty of ice, and without thinking Mr. Muth took a slide and came down real quick, striking on the frozen ground with a terrible bump. Mr. Eckels says that all Americans are honest at bottom. It was a good thing for Mr. Muth that he hit on the honest place.

C. W. Ward of Cottage Gardens gave an illustrated lecture on Carnations before the Pennsylvania Horticultural Society on the 20th inst. There was an interesting exhibition of new carnations, roses, primulas and cyclamens at this meeting.

A. B. Scott reports that the demand for young roses grafted on the Dickson-Manetti stock is unusually large this season, and that he is already booked to the full capacity.

Paul Klingshorn of the Dumont forces is down with typhoid fever.

OBITUARY.

February 13 the last of the Pouyal family died in San Francisco. It was noted as a prominent family of florists. The parents, John and Marie, opened a plant and flower store thirty-five years ago. Three months ago it was noted in HORTICULTURE that Alfred Pouyal, the only surviving member of the family, made a decoration of the flower store on its thirty-fifth anniversary. The father died two years ago. The elder son, Raymond, who succeeded the father in the store's management, died one year ago. The mother, who succeeded Raymond as manager, died three months ago, when Alfred, the last of the family, took the store's management, but on the 13th instant he too passed on—following father, mother and elder brother.

An International Botanical Congress will be held in Brussels in 1910. Owing to the death of Professor Errera, the Count Kerchove de Denterghem will be chairman of the organizing committee. This gentleman, who is and has been for many years president of the Royal Horticultural and Botanical Society of Ghent, is a well-known and ardent lover of horticulture in all its branches.

A FINE BROOKLINE ESTATE.

The estate of E. D. Brandegee, comprising some 225 acres, is one of the finest around Boston. Besides the large greenhouses, which contain many fine orchids, ferns and specimen decorative plants, there are rose, carnation, violet and chrysanthemum houses, one large house devoted to mixed flowering plants, such as heaths, acacias, callas, etc., under the efficient charge of Mr. Weir, the superintendent and gardener of the estate. There are about fifty acres in ornamental grounds, twenty in garden park and two acres in rhododendrons, of which there are about seventy-five varieties. Some of the rhododendrons succeeding best here are Everestianum, rosy lilac; H. H. Hunnewell, dark crimson; H. W. Sargent, crimson; Mrs. Milner, rich crimson, elegant foliage; Roseum Elegans, an old sort but should be in every collection; Lady Armstrong, pale rose; Hannibal rose, late variety; Delicatissimum, white tinted with pink; Charles Dickens, dark scarlet; Album Grandiflorum, bluish, fine foliage; Mrs. John Clutton, white; Sappho, white blotched with maroon; Blandyanum, crimson, and Chionicles, yellowish white.

For summer decoration of the Italian garden and on the terraces around the mansion 100 bay trees from 7 to 16 feet in height, standards and pyramids, are used. They are usually set out about the last week in April and put in the storage house the middle of October and given all ventilation possible in mild weather. Box plants, standard and pyramid, California privet in pots and tubs, standard lilacs, Hibiscus syriacus, Ixus Hibernica in tubs, and English hollies are also largely used for the same purpose.

The estate has some fifty acres woodland, about one hundred acres in meadow and mowing. The driveways and roads are annually fixed up with crushed stone, which keeps them in fine condition. The lawns have frequent top dressings and waterings in dry weather, and when mowed feel like velvet under foot.

W. SWAN.

Zimmer Bros. will open a new flower store at the corner of Farnum and 19th streets, N. W., Omaha, Neb. George Zimmer has been with the Colfax Floral Co., of Denver, and Lewis Zimmer has had charge of the conservatory at the State Insane Asylum.

CALIFORNIA NOTES.

California weather was partly cloudy and warm in all parts of the State nearly all the passing week. Light rain fell in all sections at intervals, and heavy rains occurred in portions of South California. The reservoirs of the State are well filled and all streams are running, insuring abundance of water for irrigation during the season. And it is of great economic importance that the snow in the mountains of California averages nine feet in depth now, and is frozen hard. That the snow is deep and frozen means that it will lie until gradually thawed in the spring and summer, when the water released by the sun will furnish supplies to the streams for irrigation at the time of need, and it will also give the water for electric power and its other uses in mining.

Commencing March 1st the German Government will exact in import duties 10 marks per 100 kilos on dried apples, peaches, apricots and pears from the United States, while the same product from France, Italy and Austria will only have to pay 4 marks per 100 kilos on the same dried fruits. In view of this, prominent horticulturists and canners met this week with the California State Board of Trade which passed a resolution requesting the United States senators and representatives to use their utmost efforts to impress upon the Federal Government the necessity of giving the dried fruit industry of California a full consideration and protection in any commercial agreement which may be made with the German Empire.

Horticulturally considered California's productive rank is second only to New York. This is brought out in Philip Loring Allen's Washington letter published this week in a San Francisco paper. This Washington correspondent has access to Horticultural Hall statistics, and speaking of the different States' productive awards says that New York has seventeen in the horticultural departments, namely: Potatoes, onions, beets, carrots, parsnips, turnips, green beans and peas, sweet corn, cucumbers, rhubarb, cabbage, cauliflower, beans, currants, raspberries and hay. California, he says, stands next in productive rank, having fourteen awards as follows: Pumpkins, asparagus, peaches, nectarines, pears, plums, prunes, almonds, walnuts, figs, lemons, olives, oranges and pomeloes, Massachusetts and Virginia, Mr. Allen says, are tied with three prizes apiece. "The Old Dominion has kale, spinach and peanuts to her credit, while 'there Massachusetts stands, behold her' squashes, lettuce and cranberries."

"What kind of society lands do you mostly have in Baltimore?"
"American beauties" Baltimore American.

VICTORY

The most prolific of scarlets, is a fancy in the fullest sense of the word, requires only ordinary culture, wholesaled at \$25.00 per 100 at Christmas.

CUT FLOWER MARKET REPORTS.

There is a notable dearth of stock to supply the demand for fancy grades such as called for in these closing days of the fashionable season. The prospects are for a continuance of present conditions until Lent comes in—March 1 at least. After that, a reaction may set in. All flowers of good quality are sailing along satisfactorily, except bulbous stock, much of which, although of excellent quality, has to be sold at figures that leave little or nothing for the grower. Lily of the valley is a possible exception, the many bridal occasions for this month having befriended it greatly. Considerable complaint is heard of the poor keeping quality of carnations now coming in. There is no suspicion that they have been stored—rather is it possible that they are sent in too promptly, and that a preliminary cooling off process in the right atmosphere would naturally strengthen their staying powers.

The conditions of the cut flower trade for the past week were quite satisfactory. Demand for stock has been quite brisk. Cut flowers and plants sold well in stores; prices have been fully as good as those of last year. On Valentine's Day the best demand was for violets, and at noon hardly a bunch was visible. Good supply of all seasonable stock was seen, and a fairly good clearance sale was had at the end of the week. Carnations were of the finest quality, the price holding firm; roses were not plentiful, but some excellent Bridesmaids, Brides, Brunners and Richmonds were seen and brought good returns. Lily of the valley, Roman hyacinths, narcissi, mignonette and sweet peas of fine quality could be had at reasonable prices, while tulips and daffodils came in faster than they could be disposed of. Considerable floral work was on the list which absorbed a good quality of white material. Easter lilies are in fair proportion to the demand. Calla supply heavy and sales good. Adiantum and asparagus plumosus and sprengeri are in good demand.

A healthy tone exists in the cut flower market. All stock is showing a steady improvement and business continues to be brisk. There is not an over-supply of anything with possibly the exception of violets and daffodils. Good roses are still somewhat scarce, but there is such a variety of flowers to be had that they are not so badly missed. Bulbous stock has done much to relieve the condition that has prevailed

for several weeks. Green goods are more plentiful, but the supply is still limited. There is but little complaint about the price asked for stock.

Since the Christmas holidays we have had a most satisfactory business in cut flowers, and in fact everything in the floral line. Trade did not suddenly break off at Christmas, but in a large measure kept right along. On Valentine's Day every member of the craft was simply astounded at the flood of orders that were placed. It was like an Easter business: everything was cleaned out by the early afternoon; therefore a great many orders were lost, as stock to fill them could not be obtained. Violets were the favorites; then carnations. We are bothered a little in obtaining good stock at times, but this is not so bad as a shortage of customers would be.

In most localities exceedingly fine business is reported, stock being more plentiful at the wholesale houses and very few flowers going astray. There has been much demand the past week for white carnations, owing to all for them at the automobile exhibition. Other carnations came and went rather steady. Roses continue to improve, there being some very fine Brides and Bridesmaids on the market. Beauties are not so much in demand and some worry is saved, as the supply would not fill many orders. The weather has taken on a warmer aspect, which has been saving much time in the wrapping of goods for protection. The sale of hardy ferns is reported very good at the wholesalers'.

Business conditions last week, owing to St. Valentine's day, were very satisfactory, the weather being likewise. Carnations had a very good demand, the stock and supply being good. The demand for roses was very encouraging, the quality and supply being generally satisfactory. Violets had a demand of great merit, but unfortunately the stock was not there to supply it. Lilies of the valley and forget-me-nots were greatly sought for. Mignonette, tulips, jonquils, hyacinths, narcissi and all other seasonable stock sells up to expectations, with the supply generally satisfactory.

Trade has been more active the past two weeks with sufficient supply to meet all demands excepting in roses. American Beauties and teas continue to be short in supply, owing to unsatisfactory

weather. Fancy carnations appeal strongly to buyers, and flowers entitled to such grading bring good prices. Bulbous stock is arriving in good quantities, with steady demand. All the retailers report the best St. Valentine's trade in years, with violets as a leader. This flower has come into great favor for use on that day. The public is educated to associate a certain flower with a certain day, and is worthy of commendation as a stimulus to trade. Sweet peas are more plentiful and improving daily. Funeral work and decorations have consumed an immense amount of stock of late.

The great call for flowers on Valentine's day gave an added impetus to an already good week's business. Violets have been plentiful and have sold well; roses, with the exception of American Beauties, have been abundant and have brought good prices, as have also carnations, of which there has been no lack.

St. Valentine's day was the event of a busy week, and general reports indicate 25 per cent. over any other year. Red flowers of all kinds were much in demand—red carnations, red roses, red tulips, etc., went with a rush. Violets and myosotis were great favorites with the moderate buyers, and their name was legion. Business outside of this special function was good. The only falling off was on Saturday, when things were a little slack. Beauties are more plentiful and of fine quality. Lily of the valley is not quite up to the usual standard, but prices remain normal. Carnations are good and keep firm at former quotations, although the demand for such varieties as Flamingo took a jump at St. Valentine's. Orchids are scarce.

CLUB AND SOCIETY NOTES.

E. W. Breed of Clinton, Mass., addressed the Worcester County Horticultural Society on February 15, his topic being "Herbaceous Plants."

The Huntington Horticultural and Agricultural Society, N. Y., at its meeting last Tuesday evening was addressed by E. V. Titus of Glen Cove, who superintended the work of spraying the Glen Cove section last season. The cost, benefits and results of the work were his theme.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

LET US GET TOGETHER

AN EXCITING HUNT FOR INSECT
PARASITES.

From the latest scientific bug hunt George Compere, chief of the State Horticultural Department of California, recently returned by steamship from China. His itinerary embraced travel from San Francisco to New York, from New York to Brazil, from Brazil to London, from London to West Australia, from Australia to China and from China to San Francisco. Compere went for parasites to prey on two kinds of scales that infest and destroy orange trees. One sort he found and carried to West Australia on a Government order. The second parasite involved the most curious quest for relief from pests and the longest one in point of miles traversed in the interest of science that the annals of such work may boast.

The purple scale damages the orange trees of Southern California largely. Some months ago a parasite that kills the purple scale was found and many of its eggs were sent to San Francisco to the quarantine station for insect pests, in the Ferry building in cold storage. There the specimens were viewed with admiration by Compere's confreres, Ehrhorn and Carnes, and great results were hoped for. Unfortunately the eggs did not hatch. Probably the cold storage was too much for them. How to get the parasite here in shape to do business as against the purple scale was a question that became pressing. Compere was circumnavigating the world. Communication was had with him and it was agreed that trees infested with the purple scale should be sent from San Francisco to China, to be taken inland several hundred miles in China and there exposed to the visits of the purple scale exterminator.

Compere found the trees from California in China at a sea port. He then had to journey by boat many days up a river that ran so swiftly that oarsmen could not row against the current, and it was necessary to have coolies on the river banks pull the boat along with ropes for days at a time. Finally, after some rough experiences, Compere reached the province that is the home of the enemy of the purple scale. There he went ashore.

Thousands of the Chinese farmers in the neighborhood had never seen a white man before and came miles to see Compere. The owner of the boat in which Compere had journeyed would not tie his boat to the river bank at night, because he knew that he would be killed by Chinese thieves who wished to get it, and he anchored nightly in the middle of the river. The traveled orange trees were taken ashore and were carried by two men many more miles by land. There the purple scale exterminator finally made its home in the imported trees.

Once more the trees were picked up and laboriously carried by hand by two coolies to the river. The trees were shipped by Compere and he accompanied them to the sea. Then they were put, after a time, on a steamship for San Francisco, and they reached this port simultaneously with Compere, having journeyed 12,000 miles by sea, some hundreds of miles

I find the Fumigating Kind Tobacco Powder gives the most satisfactory results. It is better than anything I have ever used, does not injure the color of flowers nor leave any unpleasant odor.

BELL MILLER, Springfield, Ill.

Why not ask for a free five pound trial sample, its convincing, it only costs you the express charge. It's no newfangled thing, hundreds write of it like Mr. Bell Miller. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOOFFHOFF COMPANY, 119 West Street, New York City, N. Y.

by river and many more hundreds by land.

From now on the trees will be watched with daily and constant care. If the purple scale parasites on them develop and live, the problem of relief to Southern California orchards will have been solved. If they fail to fulfil expectations then a second journey to China will be necessary. The search will be kept up as long as the pest exists.

REFORESTING THE CALIFORNIA MOUNTAINS.

Hon. T. P. Lukens gave an informal illustrated talk recently, at Pasadena, Cal., under the auspices of the Pasadena Gardeners' Association, upon the practical side of the forestry work in this section, illustrating his remarks with lantern slides intended to show some of the beautiful scenery in the mountains as well as the government nursery work in the forest reserves. He told of the nurseries that have taught the important lesson that the old method of sowing seeds broadcast in order to plant a burned-out district

is useless in this part of the country at least.

Here the seed is now planted in the government nurseries, and after two or three years' growth the little trees are transplanted to the hillsides and mountain slopes. Experience has shown that this method is most likely to succeed. Fire breaks and constant watching of the fires, together with systematic tree planting, are expected in time to bring back the valuable forests with which the mountain slopes of Southern California were once covered.

A NEW SUMMER ESTATE.

Rocky Point, the summer home of Charles A. Stone, is situated four miles east of Plymouth, Mass., and about three from Manomet. The estate is some 150 acres in extent, mostly woods as yet, but an ideal warm-weather home is being made. An imposing mansion overlooks Cape Cod Bay. A vegetable garden of about two acres is being laid out, with stone walls around it. The land is very rocky; the soil is clay loam, with hardpan bottom, which makes the trenching and plowing hard work. Many oak and hickory trees had to be removed, and getting out the stumps and roots is no play work. An Italian flower garden adjacent to the house is planted with hardy flowering material, and, with the help of potted plants, is kept gay till late in the fall. On the south end of this a rose garden is being made, which will take some 250 plants. Greenhouses are in the plan, and no doubt will be erected in due time. Wild roses abound in the woods in summer, and asters are plenty—some very beautiful ones in September and October in the open fields and copses. As elsewhere, the winter has been very mild, and much outdoor work has been done here.

W. S.

NITROGEN IN DEAD LEAVES.

A writer in the *Phare de la Loire* shows, in a table just published, the relative fertilizing value of certain kinds of leaves, most of which are rich in nitrogenous contents and consequently good as fertilizers. According to this writer the following are the contents of nitrogen of some of the leaves after their fall in autumn:

	Per cent.
Pear	1.86
Oak	1.18
Poplar	1.12
Beech	1.08
Locust	1.02
Elm	1.00
Vine	0.90

An examination of the fertilizing value of the dead leaves compared with that of ordinary manure shows the following results: 44 pounds of pear leaves, 80 pounds of poplar, 51 pounds of peach, 83 pounds of locust, 82 pounds of elm, and 174 pounds of vine, respectively, are equal in nitrogen to 100 pounds of manure. From report of Consul Goldschmidt, Nantes.

A BARGAIN

I have for sale a modern range of greenhouses, 25,500 feet of glass, 1 1/2 miles from wealthy growing city of 28,000 people. Forty-five minutes from Pittsburgh, Pa. Three railroads and express lines, 28 acres. Ideal soil for roses and carnations in abundance. Admirably adapted to the growing of sn all fruit and garden crops.

Sixty horse power boiler, steam heat. Free natural gas for all light and fuel for greenhouses, and farm buildings. A most complete private water system, 1,000 barrel storage tanks, large dam, never failing springs. Producing oil well on the farm. Buildings high and dry, away from all smoke, dust and dirt, fogs unknown, plants free from disease, houses well stocked and producing paying crops, best market selling high grade stuff direct to retailers. Best of reason for selling. Price, \$32,000, part on time, will show a net profit of 22 1/2 above expenses, can be increased. This offer will bear closest investigation.

NEWS NOTES.

Harry Clark of Sharon, Pa., lost his entire stock of plants on February 8 through the failure of his steam boiler to do its work. His loss is estimated at \$1,500, and he will be forced to retire from the business.

Consul Baehr of Cienfuegos writes that the Cuban government, in connection with the second international automobile races of Cuba, to be held on Feb. 12, will experiment, at a cost of more than \$6000, with a new process for laying dust. The races will be run over a 50-mile track, which will be sprinkled with an emulsion of asphalt, a process not heretofore tried in any country. From experiments carried on it is believed that the asphalt sprinkled road will be a success, as it promises to be a great improvement over the oiled roads, laying the dust for a much longer period of time. The work will be done with street sprinklers. The asphalt will be reduced to the finest kind of powder. This will be mixed with a solution of alkali and water and sprayed from the sprinkler. Should this experiment prove successful, the new process will no doubt be universally adopted.

ANNOUNCEMENT

The Pierson U Bar Company has been organized to place vigorously before the public, the U bar type of greenhouse construction, knowing it to be far in advance of any other construction used for greenhouse purposes.

The originators of the U Bar construction, Lincoln Pierson, and Paul M. Pierson, are President and Secretary-Treasurer, Henry S. De Forest, Sales Manager.

The identification of these men with this Company assures the public that the great reputation of the U bar construction will be fully maintained. The patent rights are owned and solely controlled by this Company.

With those anticipating the erection of a greenhouse, we will be pleased to correspond or confer in person.

To our friends we extend a most cordial welcome.

About Greenhouses

And the Way Iron Rusts

Put a piece of steel in the ground and it rusts faster than wrought iron. Put a wrought iron pipe as a support or post and it eats itself away at the ground line. Now try a cast iron foot piece and it simply scales over and there it stays — no more rust — good for a century.

That's just the reason why we use the cast iron foot piece at a greater cost to us than the wrought iron

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

Winter Flowering Sweet Peas

Perhaps I have said enough of late about winter-flowering sweet peas yet I know that those interested in these flowers will welcome anything that may tend to further enlighten them. The object of these remarks is merely to show what is being done at present by Anton C. Zvolanek, a specialist in this line. I had told the readers of HORTICULTURE that the time was not far off when we would see the colors of the summer-flowering soils embraced in the early-flowering varieties. I could see for myself that this was quite possible as I had made a few crosses with the summer bloomers on the early-flowering sorts, from which I got several varieties with the early-flowering habit and the colors of the summer-blooming ones. I had received seed of some hybrids from Ant. C. Zvolanek which I described in a recent issue of HORTICULTURE. Having had an invitation from Mr. Zvolanek to come and see his peas growing I betook myself to Bound Brook, N. J., one day recently to see for myself what he was doing. It was really a treat to meet this gentleman, as I knew he was heart and soul in sweet peas, while I was, perhaps, equally enthusiastic, but I was not prepared for the sight that met my eyes on entering the greenhouses—whole beds of new varieties in separate blocks of each color, all the picture of health and full of bud and bloom. I

EARLIEST OF ALL—At Wm. Sim's

MONT BLANC—At Wm. Sim's

took a list of some of these that I considered the best commercially. They were as follows:

Wm. J. Stewart, soft blue; Mrs. Alex. Wallace, lavender; J. K. Allen, spotted pink on white ground; Enchantress, salmon pink; Jack Hunter, yellow; Mrs. C. Wild, carmine; Meteor, scarlet; Christmas Captain, blue; Helen Gould, violet mauve on white ground. There were large blocks of Florence Denzer and Christmas Pink. Improvements could be seen in the hybrids blooming for the first time. Mr. Zvolanek is certainly doing a great work which will soon be appreciated by all lovers of the sweet pea. I stayed the greater part of Sunday with Mr. Zvolanek arriving in Boston Monday morning after one of the most enjoyable and profitable days I had ever spent.

William Sim

New Sweet Peas

No flower has risen so rapidly in popular favor as the sweet pea has during the past few years. It is now the flower of the million—a favorite with rich and poor alike. It is so easily grown, and there are now so many beautiful varieties to be had, that its rapid rise in popularity is not to be wondered at. It makes a grand show in the border, while it is one of the most attractive flowers for the house. Even the rose is hardly paid more homage than the sweet pea in its season. There is now a special society devoted to its welfare, and annually there is an exhibition of sweet peas in London, from which all other flowers are rigidly excluded. It occupies an increasingly important position in trade catalogues, colored plates are circulated of the best new varieties, and everything is done that can be done to increase its cultivation.

The wonderful variety of coloring represented by the sweet peas of today doubtless accounts largely for their extraordinary popularity. Every season there are fashionable colors, and colors that are not fashionable; thus the flowers whose color range is limited drop out of fashion for certain periods. The sweet pea has such a wide color range, however, that it is never neglected. If one variety is dropped its place is easily taken by another of a different shade of color. Several remarkable new varieties were exhibited last year (1905) for the first time, and the most striking of all is the one shown in the accompanying supplement—Henry Eckford, named in honor of the late Henry Eckford, founder of the famous firm of sweet pea specialists. This is undoubtedly the novelty of the season. It is very free flowering, of vigorous growth, and the color

is beautiful and unique. There is certainly no other sweet pea like it; it was recognized as quite a new color break among sweet peas. It has received high honors, an award of merit from the Royal Horticultural Society, and a medal for the best novelty of the year from the National Sweet Pea Society. All who have seen Henry Eckford sweet pea have admired it for the size, shape, and coloring. It says a good deal for Messrs. Eckford's opinion of its merits that they chose for it the name of the head of their firm.

Evelyn Byatt is a handsome new variety sent out by Watkins & Simpson, Covent Garden, London. It somewhat resembles the older variety Gorgeous, but it is of more rich and brilliant coloring. It is not a large flower, but what it lacks in size is amply compensated for by the fine color.

Queen Alexandra is a new variety with an excellent reputation. It is a good deal similar to Scarlet Gem, but Eckford says that the flower does not scorch in the sunshine as the latter is apt to do. Scarlet Gem, although a beautiful sort, is often disappointing, especially in a hot dry garden on account of its flowers getting scorched. If Queen Alexandra is as valuable as it is reputed to be, then it will be a novelty worth having.

Helen Lewis and John Ingman are two lovely varieties of the Countess Spencer type of flower. Helen Lewis was honored by the Sweet Pea Society last year. The standard is rich orange-salmon, and the wings are orange tinged with rose. John Ingman, which received a first-class certificate in 1904, is described as rose-magenta, flushed with crimson.

Sybil Eckford (pink and cream); Phyllis Unwin (a rose-carmine form of Gladys Unwin); Helen Pierce (mottled with bright blue on a white ground); Bacon (carmine and cream); Mrs. Hardeastle Sykes (pink, Countess Spencer type); and Codsall Rose, a large rose-colored variety, are other good new ones. All the above were exhibited in 1905 for the first time, and are therefore only offered to the public this spring. The particulars given are therefore from the raisers' descriptions, for gardeners have not yet had an opportunity of testing their merits. There is no doubt that most of them are very lovely, and if the plants prove as satisfactory as the flowers are beautiful, they will be grown in every garden when the seeds are cheaper.

There were some excellent sorts sent out in 1905, the best being the following:

Black Michael. This is a new shade of maroon, but it is doubtful if it will ever supersede those two splendid maroon colored sweet peas, Black Knight and Othello.

Gladys Unwin. This is a lighter shade of pink than Countess Spencer, and is said to fade in color when cut. It is not unlike Countess Spencer, which is generally admitted to be better colored.

David R. Williamson is a really good dark blue sweet pea. It generally bears at least three blossoms on a stem, and the stems are long and strong.

Romolo Piazzani too bears three blossoms on a stem, which is unusually long, thus giving the variety a considerable decorative value. When the blooms first open they are mauve rather than blue, but soon develop into the truest blue color yet seen in the sweet pea. The sweet peas Florence Molyneux (rose flaked), Mrs. H. Kendal Barnes (apricot-colored), and Mrs. George Higginson, Flora Norton and Miss Philbrick, all pale blue, are other really good varieties.

Strobilanthes

The genus *Strobilanthes* has about 180 species, but there are only about three species that are cultivated in our greenhouses. They come from the East Indies and grow very satisfactorily in an intermediate house, say from 50 degrees to 55 degrees Fahr. The most showy species at the present time is *Strobilanthes anisophyllus*. It grows about 3 ft. high and has very graceful branches. The pleasing lavender colored flowers which are produced in great abundance are over an inch in length. The plants last in bloom about four months.

Another species very nearly related to the above is *Strobilanthes isophyllus*. It is a more compact plant but has not the graceful habit of *S. anisophyllus*. As they bloom at the same time *S. isophyllus* makes a good companion to the other.

They are not new plants by any means but have been in cultivation for over half a century and used to be grown under the generic name, *Goldfussia*. It was very amusing at a recent exhibition in Boston where these plants were shown how many of the old gardeners had forgotten these old plants, and many of them asked the writer "If he knew what these pentstemon flowered plants were." This is only another instance where botanic gardens show their usefulness in preserving from oblivion plants that were once common. Although the flowers look like pentstemon flowers they do not belong to that family but to the closely related *Acanthus* family.

These plants are well worth bringing back into common cultivation again and given a place where easily grown and floriferous plants are needed. I have no doubt but any of the above species if grown well would make a desirable addition to our florist winterflowering plants. Not only this but I think they would make charming window plants for amateurs who could grow them and flower them in a good sunny window. What would be more graceful and pleasing in a window than a nicely grown plant of *S. anisophyllus*? The cultivation is very simple. It is desirable that they should be grown from cuttings each winter or spring. The tips of young branches when made into cuttings root very easily. In two or three weeks they are rooted and ready to pot into small thumb-pots. Out of thumb-pots they can be shifted into four-inch pots using any ordinary potting soil. About the end of May they can be planted out into the garden where they can stay until the middle of August when they will be large enough for six or seven inch pots.

During the summer they require frequent pinching to make them into bushy plants. Discontinue pinching after the third week in August; this will give them ample time to make long, graceful flowering branches. Give them plenty of water during the summer. When the night begins to get cold take them back to the greenhouse. When potting use a compost of fibrous loam with plenty of leaf-mold.

The other species that is grown is of more recent introduction and is known as *Strobilanthes Dyerianus*. This is one of our finest foliage plants but requires more heat than the other species. In a hot dry summer and in a position where it will get plenty of sunlight this makes a charming bedding plant. If the summer is wet or cold the leaves fail in their brilliant colors.

Harry H. Thomas

London, Eng.

Robert Cameron

Are the Tendencies of Vegetable and Animal Life Toward Perfection or Degeneracy?

We hear of late a great deal about natural forces propelling every living thing onward and upward to more perfect conditions. Luther Burbank, referring to natural selection says, "We see this natural selection in all life every day around us. But this is but one of the many forces at work in the upward, outward, and onward movement of life." But the seeming wonderful progress towards perfection is simply the results of the stimulants of culture, environment, hybridizing, and selection, which are wholly artificial and not natural forces. Mr. Burbank further says, "The life forces in their march meet obstacles around, under, over, and through which they must pass"; again, "The life forces may be compared to a river constantly pressing forward." Mr. Burbank certainly deserves credit for ascribing to natural forces the improvements he has made when he might justly have claimed them for himself. I must say that in my experiments I have never recognized the tendency of natural forces to perfection, but towards degeneracy; and that I can but regard the present condition of all vegetable and animal life as a struggle for existence, and that all the improvements that have been made are but artificial, and that retrogression to former conditions would soon follow if the improved conditions, care, and culture were withdrawn. This retrograde movement or tendency is sometimes described as running out. Some vegetables, and the Baldwin apples are said to be running out, which condition is simply the result of neglect or climatic changes, and are not held up by natural forces.

There is a limit to the improvement of all species and varieties. Some thirty or forty years ago there was exhibited at the rooms of the Massachusetts Horticultural Society two clusters of Concord grapes; one weighed two lbs., the other two lbs. two ounces. That I regard as the limit for the Concord grape, beyond which I have doubts that it will ever pass. This remarkable exhibition was the result of care and culture, and not of natural forces. I have a Concord vine growing practically wild, and it would require eight of its clusters to weigh

one pound. Of course there may be produced by hybridizing, crossing, and selection, a new variety that may surpass the older ones in hardiness and excellence of quality. There may also be mutations or new species developed of a sudden, and not through long years of evolution as Darwin supposed. There are too many missing links in that theory and it is very doubtful if any new species have ever been created in that way. These new varieties and species will also have their limit, beyond which they cannot pass, and no natural forces will attend them to ensure a perpetual onward and upward course. In the breeding of new varieties there is no certainty of improvement. There are a great many blanks to one prize and the time will surely come when the inhabitants of this earth will be obliged to be content with products inferior to what we now have.

There are elements of decay in the improvements we make. Our domestic fowls have lost the use of their wings as means of escaping danger and would soon be destroyed if turned out to shirk for themselves, and the bovine is being robbed of its horns, its only means of defence. Hybridizing is now extensively used for the improvement of fruits, flowers and vegetables; but hybridizing tends to sterility and a large per cent. of hybrid blossoms are imperfect and in many cases the power of reproduction is lost, as in the seedless oranges and grapes. Hybrid oranges in some cases were nearly all seedless. After all, this so-called improvement is largely a matter of point of view. The epicure desires more and better meat from the animals, and more pulp from the fruits, while the naturalist prefers to view things in their natural state and regards the forced conditions as simply distortion, and ruinous to the welfare of plants and animals. But the animals and plants are grown for a purpose, and the methods of production best calculated to suit that purpose are the methods that will be adopted, regardless of consequences. Whatever the methods that may be adopted I hope no one will sit down and expect natural forces to do the work.

R. B. White

Do Varieties Deteriorate?

I was very much interested in reading Mr. Gilbert's article under this heading in your issue of Jan. 27.

I am of the opinion that they do deteriorate and am just as strongly of the opinion that they do not. I believe that it is simply a matter of selection, cultivation, and location. Select poor cuttings or seed, plant them in improper soil, location, or climate, and add poor cultivation and any variety will deteriorate; reverse these conditions and keep it up year after year and I believe that a variety will improve and keep on improving indefinitely.

A visitor at the Carnation Society's convention, Mr. Shand of St. John, N. B., told me that Marie Louise violet grows luxuriantly with him and that violet disease is there unknown. He made no claim to any special cultivation but attributed his success to the climate. I am doubtful if there is a healthy plant of this variety in the vicinity of Boston.

I had been accustomed to see fairly good specimens

of Lombardy poplar in Ontario and was surprised at their failure around Boston, but now at our Boston City Hospital can be seen several rows of fine robust specimens, perfect from base to top, and every one as good as its neighbor. They were planted ten years ago and I, at the time, predicted failure for them. But Mr. Robb had given the situation some thought. A tree of pyramidal growth was needed and he thought the cool, damp bottom of the hospital would be suitable for them. So far his conclusions have been correct. They are more and more beautiful every year and are far from showing any signs of deterioration. They certainly look as if they were made for that location.

FLORIST, PLANTSMAN, LANDSCAPE

GARDENER AND KINDRED

INTERESTS

HORTICULTURE PUBLISHING CO.

11 HAMILTON PLACE, BOSTON, MASS.

Telephone, Oxford 292

WM. J. STEWART, Editor and Manager.

"The most unkindest cut of all" The cut flower commission man can now sympathize with the carnation novelty introducer, who is getting a taste of what it feels like to be called bad names.

Hitherto the commission man has been the stock rascal of the business but, judging from the various communications recently published by some of our contemporaries, this distinction is in danger of shifting from the commission man to the wicked carnation man. We shudder as we think of the tricks that are practiced, the giant humbugs turned loose, the wilful deceptions that shake confidence and forebode fearful things, but are glad to still feel that our friends of the Carnation Society don't really mean all they are saying about one another and that there will be no funeral.

For the advancement of the rose

That the approaching meeting and exhibition of the American Rose Society at Boston will do much to stimulate activity and open up new spheres of activity in rose breeding, rose culture under glass and in the open, and awaken fresh interest in the Queen of Flowers as a decorative subject, no one can doubt. The prize schedule of the Rose Society is liberal and comprehensive and will undoubtedly bring out a remarkable display. The spring show of the Massachusetts Horticultural Society, always a scene of rare beauty, to be held at the same time, should prove a further incentive to a large and representative attendance from far and near and insure the transaction of business at the sessions of the society of far-reaching importance to the rose and the rose grower.

A course of study in landscape work

The Gardeners' and Florists' Club of Boston contemplates the inauguration of a course of study next season in the fundamentals of landscape construction work for gardeners who wish to perfect themselves in this branch of their art. For

the lack of a proper working knowledge of plan drawing, road building, etc., many gardeners, otherwise fitted to attain great eminence, have been forced into obscurity by landscape architects, many of whom possess only a very superficial knowledge of plants and their adaptations. The proposition to provide the ambitious gardener with the technical instruction he stands so much in need of is one worthy of Boston and is certainly well timed, for there are in this section of the country many young men of ability and promise to whom the acquirement of an education on the lines proposed will be the stepping stone to a position of honor and distinction in their future career. We hope the plan will be put in operation and that many will take advantage of it.

Plant retrogression and the plant breeder

Our readers are hammering away at the old but very timely question as to whether varieties deteriorate or not and some valuable lines of thought are being opened up. We are not quite sure that all are agreed in the premises as to what constitutes deterioration. When a variety takes advantage of the discontinuance or modification of the forces or conditions which have contributed to the development of abnormal qualities to gradually revert to its natural form the process may be deterioration or it may be the reverse, according to the standpoint from which one judges and the special purposes for which the plant is valued. Fortunately this tendency towards original forms as soon as control is relaxed can be depended upon to provide a wide and ever-fascinating field for the enthusiast. Perhaps there is no department of horticultural industry from which the substantial returns are so meagre in proportion to the intelligent labor and application expended as that of the plant breeder and improver. His work has been likened to a lottery in which the blanks are many and the prizes few. If the charm of mystery and the zest of discovery were not fully as potent influences as the hope of pecuniary reward, advancement would be slow. Our debt to the patient hybridizer is much greater than we realize.

THE Lincepina GRAPE.

Origin of
Lincepina Group

The Lincepina is a new grape recently originated by the writer and, as will be seen, by the accompanying diagram, is composed of several varieties of the following species, viz.: *Vitis Labrusca*, *Vitis vulpina*, *Vitis Lincecumii* and *Vitis vinifera*, a foreign grape.

The name Lincepina is a combination of *Lincecumii* and *vulpina*. When the cross was made, the mother vine was supposed to be a pure *Lincecumii*, and the male parent, the Clinton, is regarded by most botanists as pure *vulpina*, and by some as a hybrid of *vulpina* and *Labrusca*. But since the cross was made it has been found, as

shown by the accompanying diagram, that the mother vine has in its make-up the blood of the Delaware, Lindley and Brilliant, all red grapes, which fact explains or accounts for the color of Lincepina, which is red, while both parents are black.

The Lincepina is the most beautiful grape that the writer has ever seen, of rather dark red color and covered with lilac bloom. Its clusters and berries are large, and its quality is pure and sprightly, pulp tender to the center, and so transparent that when held up to the light the seeds are plainly seen.

M. B. WHITE.

PERSONAL.

Wm. Duckham, of Madison, N. J., returned last Monday from his trans-Atlantic trip, hale and hearty.

Chas. Loechner of the Yokohama Nursery Co. and Mr. Outerbridge of Henry & Lee were recent callers in Toledo.

Henry Eberhardt of Catonsville, Md., has sufficiently recovered from the injuries received last July to be able to give his attention to his business.

James B. Kidd, formerly with the Cox Seed Company, San Francisco, has taken a position with the Yokohama Nursery Company, New York City.

J. L. Schiller is now back from the hospital and has taken up his work in Toledo again. The Florists' Club sent him flowers regularly during his illness.

We hope our readers will, as far as possible, buy everything they need from Horticulture's Advertisers.

WHOLESOME CHESTNUTS.

Either make a trellis to grow tomatoes on or provide stakes for supports. Leaving them lying on the ground is a barbarous method, benefiting only the crawling creatures that eat parts of them.

Whenever the weather is suitable keep busy in the garden. If any digging or trenching remains undone do it, but work at it only when the soil is dry. It makes bad digging and disagreeable work when the soil is wet.

Make a careful plan beforehand of the garden, dividing it into plots, then decide what is to be planted or sown in each plot, and when planting time comes begin at one side of the plot, leaving space for successive sowings or plantings. This method will not only save time but it will also make the garden look more ship-shape, I should perhaps say garden shape.

ASTILBE DAVIDI HORT.

Translated from "Gartenflora," Berlin, by G. B.

This charming astilbe grows frequently in the Mongoly and in Japan on the river banks in the mountains. It was discovered in 1864 and by Franchet classified as a variety of *Astilbe chin.* Max. Franchet recognizes three forms of *Astilbe chinensis*:

(a) *Typica*; petals lilac, on the ends obtuse; flowers in thick clusters—native of China.

(b) *Japonica*; petals white, on the ends somewhat broadened and obtuse—native of Japan.

(c) *Davidi*; petals lilac, lineal, on the ends not broadened, but pointed; flowers in thick clusters—native of Mongoly and Japan.

This last is a strong growing perennial with elegant spraylike foliage and graceful upright flower stalks from 4 to 5 feet high. The color of the flowers is a deep rose violet or purple-red. The leaves spring from the roots, threefold feathered and double feathered, of bronze-green color when young. At maturity they become light glossy green. It resembles at that time much the well-known *Astilbe jap.*, only its foliage is larger. The large flower stalks measure two to two and a half feet in height.

In 1902 the plant got a first-class certificate from the Royal Horticultural Society in London, being introduced by Messrs. James Veitch & Sons. On account of its close relation to *Astilbe jap.* it may prove a valuable forcing plant, especially if hybridizers should succeed in developing the color of the flowers to a little livelier red. This remarkable perennial is not fastidious as regards culture but flourishes in any good moist soil; plenty of sunshine is not harmful, providing the beds are kept evenly moist.

SYRINGING ORCHIDS.

Editor HORTICULTURE:

Mr. E. S. Rand in his "Orchid Culture," says that cattleyas should never be watered or sprinkled on the leaves and on the bulbs. I should be much pleased to hear from some one in regard to this.

Also, is a hygrometer a good thing to have to ascertain the moisture of the house?

Very respectfully,

M. R.

The above statement, by whomsoever expressed, is absurd. Neither cattleyas, nor any other orchids can be grown successfully without moisture on the leaves. We only need to remember the forests where the cattleyas grow in a wild state, where they are frequently drenched with rain, to realize that they need it in culture also.

A hygrometer is a good thing to have to ascertain the moisture of a greenhouse.

JOHN E. LAGER.

WHAT THEY SAY OF US.

Inclosed please find check for my subscription for one year to HORTICULTURE. I enjoy reading it and wish it all possible success.—R. M. M.

Please find enclosed one dollar for HORTICULTURE to January, 1907. The paper has a prosperous appearance and I hope will continue to grow.—N. M. S.

NEWS OF THE CLUBS AND SOCIETIES.

BUFFALO FLORISTS' CLUB.

The regular meeting of this Club was held at W. F. Kasting's Hall, on Tuesday, February 27. Officers for the ensuing year were elected as follows: President, Louis Neubeck; vice-president, H. J. Wise; secretary, W. J. Peake; financial secretary, E. C. Brucker; treasurer, Chas. Keitsch.

After a number of applicants being elected to membership, and the regular routine of business transacted, adjourned to the flower show which was one of the best carnation exhibits at any meeting of the club. The exhibition was in charge of Charles Keitsch. There were not only carnations but roses, mignonette, sweet peas and a collection of cyclamens. The judges, Wm. Scott, H. J. Weiss and C. T. Guenther reported as follows: Winsor, exhibited by F. R. Pierson Co., scored 92 points; Helen Gould, by the same, 80; J. Haines, by the originator, 89; My Maryland, by Weber & Son, Oakland, Md., 88; Jessica, by the same, 92; Light Pink Lawson, by W. J. Palmer & Son, 81; Glendale, by Vesey & Co., 84; J. A. Valentine, by the Chicago Carnation Co., 84; Skyrocket, by the same, 86; Imperial, by the same, 88; Seedling No. 49, scored 84. Outside of the new varieties the Chicago Carnation Co., exhibited Mrs. Patten, Glendale, Haines, Prosperity, White Lawson, Red Lawson, Pink Lawson, Lieutenant Peary, Cardinal, Crusader and Harlowarden. Wm. H. Ehmann exhibited Cardinal, Red Lawson, Nelson, Golden Beauty and Pink Lawson. The Scott Floral Co., vases of carnations and mignonette. Enchantress and Lawson from White Bros., Gasport, N. Y., Governor Walcott by C. T. Guenther of Hamburg, N. Y. Variegated Lawson from F. R. Pierson Co., also a collection of many varieties from Theo. Venneman, gardener for Geo. Urban, who had also a very fine collection of cyclamen. Four vases of sweet peas were received from Anton C. Zvolanek, Boundbrook, N. J. The Waban Conservatories sent an exceptional fine vase of Wellesley roses, also a fine vase of Kate Moulton was received from the Minneapolis Floral Co. Carnation Melody was staged by W. C. Hill Floral Company, Streator Ill., and H. A. Hart, Rochester, sent a white seedling.

The evening was completed by a banquet at which the members heard from Wm. Scott, as toastmaster. Also W. A. Adams, Chas. Keitsch, President Louis Neubeck, D. B. Long, Chas. Rooney, Hon. Geo. Urban and many others.

ROSE NIGHT AT PHILADELPHIA.

The next regular meeting of the Florists' Club of Philadelphia, will be held Tuesday evening, March 6, and will be known as Rose Night. All the novelties or new candidates for public favor among the Queen of Flowers are hoped for and expected, among them "Miss Kate Moulton" and "Queen Beatrice," or any other new variety of merit. Please bring same, or forward them prepaid by express, if not convenient to come with them, in care of Mr. David Rust, Horticultural Hall, Broad Street, above Spruce, Philadelphia, Pa.

EDWIN LONSDALE, Secretary.

KENTUCKY SOCIETY OF FLORISTS.

The Kentucky Society of Florists held the third carnation and rose exhibition last Wednesday, with a good representation, the following being the exhibitors: The H. Weber & Sons Co., Oakland, Md., choice blooms of Jessica and My Maryland; Backer & Co., Billerica, Mass., mixed seedlings and sports; A. B. Davis & Sons, Purcellville, Va., Red Sport, a great shipper; W. J. & M. S. Vesey, Fort Wayne, Ind., Glendale; The Chicago Carnation Co., Johet, Ill., Skyrocket, No. 49, a good red; Daybreak, Red and White Lawson, Imperial, Fiancee and Glendale; R. Fischer, Great Neck, L. I., Abundance, also Freesia Purity; H. A. Jahn, New Bedford, Mass., No. 49, a fine white, which traveled unusually well, also two good crimsons, Nos. 43 and 7; Fred Boulon & Son, Sea Cliff, N. Y., Long Island Beauty, a very good shipper, also Princess of Wales violet; John E. Haines, Bethlehem, Pa., John E. Haines, the favorite in its color; John Reimels, Woodhaven, L. I., Winsome, a light pink, which no doubt will do what its name implies; Indianapolis Flower and Plant Co. and John Hartje, Indianapolis, Ind., Candace, a beautiful pink; Minneapolis Floral Co., Minneapolis, Minn., the rose which made the hit, Miss Kate Moulton; H. R. Carlton, Willoughby, O., the beautiful new violet, Gov. Herrick; Mrs. C. B. Thompson, violets, lilies of the valley, Beauty and Chateaux roses; Louis Kirch, Mrs. T. W. Lawson, Lady Bountiful, Enchantress and Flamingo; C. H. Kunzman, Mrs. T. W. Lawson, Prosperity, Lady Bountiful, Enchantress and some very good seedlings, also lilies of the valley; Leo Zoeller, Enchantress, Mrs. Joost, Mrs. E. A. Nelson, Mrs. T. W. Lawson, also some white; August R. Baumer, Mrs. T. W. Lawson, Enchantress and Nelson Fisher; Jacob Schulz, Cardinal, Enchantress, John E. Haines, Mrs. T. W. Lawson, Variegated Lawson, Lieut. Peary, Lady Bountiful, Bride and Bridesmaid roses, forget-me-nots, mignonette, Marguerites, lilies of the valley, antirrhinums, sweet peas, and pansy plants.

The next meeting of the Society will be held Tuesday, March 6.

NASSAU CO. (N. Y.) HORTICULTURAL SOCIETY.

The February monthly meeting of this society was held on Wednesday, 7th inst., at the usual place. President Harrison occupied the chair. The meeting was well attended. Two active members were elected and three proposed, also one honorary member. Preparations for a fall flower show were begun. Already one silver cup has been presented for competition, to be placed on carnations.

A choice assortment of well-grown carnations was exhibited by S. J. Tress, Glen Cove, also two pots of cyclamen, which were exceptionally fine, receiving the society's certificate of culture. The same gentleman exhibited a vase of his fine seedling carnation, "Maxwellton." It is a pure white, of good size, substance and shape, and looks like a "taker." More will certainly be heard of it. Mr. Conine, Connecticut, was a visitor and made some appropriate remarks.

COLUMBUS FLORISTS' CLUB.

The regular second meeting for February took place last Tuesday evening in the club's rooms at Iroquois Hall. The attendance was very creditable, and the members present were very much interested and took active part in the various matters under discussion. Vice-President V. P. Curry was in the chair, and Secretary James McKellar attended as usual to the records. The topic of the evening, in which the greatest interest centered, was the arranging for the annual distribution of flower seeds to the children of our public schools. It is the custom of the club to annually purchase suitable flower seeds for school gardens and home use, and through the head masters of the schools distribute them to the children who show an interest in things horticultural. The children pay one cent for each packet of seed they receive. The plan works famously, and is doing much good in our city. Last year the children of nineteen schools were supplied with seeds, and this season the demand seems steadily growing. The matter of a chrysanthemum show this fall was discussed; our members are very enthusiastic over it, as last autumn's success was so encouraging. There was a free discussion on this subject, and the members seemed to be in the fullest accord in the matter. Messrs. Stevens, Curry, McKellar, Woodrow and Seiber gave their views.

TOLEDO FLORISTS' CLUB.

Great interest was shown at the last meeting of the Florists' Club in the forthcoming big quarterly meeting of March, with which a small exhibition of cut flowers, etc., is to be connected. It was first intended to have this exhibit in the club room, but after more consideration it was thought advisable to find an unoccupied store in a rushing neighborhood, so the public may have a chance to look at it. President Bayer was chosen to hunt up a place. A special meeting will be called soon to settle all final arrangements. Mr. Hasselman staged Candace, the new Dorner & Son sent a box of White Perfection; both were much admired, but when Krueger Bros. of our town unfolded their new pink sport of Enchantress, of which they have just two plants, it was a genuine surprise.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

A meeting of the society was held on Tuesday evening, Feb. 20th, in their hall in the Courier Building, with a very large attendance of members. The feature of the meeting was a paper, read by Walter Angus of Chapinville, on the chrysanthemum. Mr. Angus went thoroughly into his subject, from the cutting bench to the exhibition specimens. After the close of the meeting a smoker was enjoyed by the members. Ralph Booth, the comedian, entertained with songs and stories and there were several songs and addresses by the members. The meeting closed with all singing "Auld Lang Syne." At the next meeting, March 6th, John N. Champion will give an address on cut flowers.

THE CARNATION OF TODAY

(A paper by Robert Craig, of Philadelphia, presented to the Horticultural Society of New York on Feb. 14, 1906.)

The carnation, as grown today, is almost exclusively a florists' flower, and hybridizers have been breeding to improve this strain, but there is a wider field and an important field for them—the development of garden carnations hardy enough to live through the winter without protection, in the latitude of Philadelphia and New York, and with the quality of blooming through the summer. The discussion of this idea might form a lengthy paper in itself, so I will confine my remarks to varieties grown under glass for winter bloom.

It would not be wise for me in view of the fact that at the present time the literature of the carnation is so voluminous, to attempt to give you a comprehensive and detailed history of the wonderful flower, as we know it today, and as we see it here on the tables tonight.

There is more space in the gardening papers devoted to the carnation than to any other plant or flower. The minutest details as to soils to be used, and methods of culture to be observed, as well as criticisms and descriptions of new varieties as they appear, with histories of the achievements of each in the competitive exhibitions throughout the country, with able discussions on the ancestry of each pedigreed variety; its vigor of constitution or lack of it; its freedom of bloom or its failure to have this very desirable quality; its desirable habit of commencing to bloom early in the fall, or its undesirable tendency to defer blooming until a later period. Detailed and frequent information on every thing pertaining to carnations is so easily accessible that every one interested must have his desire for knowledge almost fully satisfied, as far as the printed page can give, and little further can be learned except by personal culture of the plant, which occupation I recommend to every amateur as one of the most charming that can engage his or her attention. So, I feel that if I am to interest you tonight, it may be by a brief expression of my thoughts as I review my experiences of the past forty years, with mention of the most famous varieties which have appeared from time to time, remaining with us until they were either overtaken with disease or were displaced by better varieties of similar color and character. Of the hundreds of sorts introduced in that period I will speak in about the order of their introduction, and of each color separately, so as to bring clearly to your minds the wonderful improvement which, notwithstanding many failures, has gradually been made.

Improvements Maintain Interest.

The frequent appearance of improved varieties is the principal factor in maintaining the lively interest in the carnation; there is always something to be said about a distinguished new-comer and comparisons to be made with those that have preceded it. Scarcely a year passes by without bringing us one or more real improvements; other kinds of plants and flowers, with the possible exception of the chrysanthemum, do not appear to be so susceptible of improvement.

Take the rose, for instance, particularly the varieties which are forced for cut flowers; we see few changes for the better. Bride and Bridesmaid have remained for many years the leading teas, and the peerless American Beauty has had no rival for a quarter of a century. It is true that quite recently there have been introduced several good forcing roses, Liberty, Killarney, and, last, the very valuable Richmond rose. The latter is destined to be very largely grown; all honor to E. G. Hill for the Richmond. * * * He is now raising rose seedlings, has thousands on the way, and with the experience of so many years to help him, is almost certain, soon again, to give us something we will all be proud of.

But we cannot hope to get good, new roses as frequently as carnations; it is not in the wood. Take, again, another class of plants, the palms, so deservedly popular as house plants. Nothing new appears at all equal to the old-time kentias and arecas. New palms, it is true, are introduced from time to time, but none equal to those which we have had so many years.

While the constant introduction of new carnations is very interesting and fascinating, it is alas, true, that where we get one real improvement, there are several introduced with exaggerated praises which are practically worthless. But it will be more difficult in the future to send out poor or mediocre sorts: the trade is becoming more and more critical and the National Carnation Society is doing all it can to prevent the introduction of inferior sorts. If there be a really good sort ready for the market, this very critical inspection and wide publicity will only serve to advertise its merits and increase its sale.

The First Valuable Carnation.

The first valuable carnation to come under my notice was La Purite, which is generally spoken of as of a deep pink color; it was rather a carmine with violet flame. The shade was very pleasing. It was imported from France in 1858; in 1862 my father bought one plant which cost \$2.50 and proved to be a good investment, as it was of easy propagation, and two years later we had a good stock which was in brisk demand at \$20 per hundred. I once heard the late George Wilson of Malden, Mass., who was a very successful florist, say that the best investment he ever made in floriculture was the purchase of fifty plants of La Purite at \$5 per plant. This was probably in 1861. This carnation was for fifteen years or more the most largely cultivated of the time. It was very productive, I have seen a house of it at the late Wm. Bennett's at Flatbush, which had on every plant from seventy-five to one hundred as he grew it, but it came to pass after he had grown it so well for a number of years, it was attacked by stem-rot, and on calling at his place one day early in the winter, I found more than one-half the plants dead. It was so attacked with more or less virulence, in all sections of the country and, I believe, the once grand old

variety is now extinct. I last saw it at Karl Muller's place in West Philadelphia, about fifteen years ago. This fine old German gardener managed to grow it successfully five or six years after it had generally disappeared. The blooms of La Purite were about one-third the size of our now famous Enchantress, and the mental comparison between the two is to me very interesting. No carnation has had, as the theoretical men say, such a long run on the stage as La Purite. Its successors in the deep pink class were Tidal Wave and Thomas Cartledge, both useful, but Tidal Wave attained the greater popularity.

The Light Pink Class.

Of the light pink class there have been several notable ones. Grace Wilder, introduced by Mr. Tailby, was a very useful variety, for many years the best of its color. Later, we had the famous Wm. Scott, and if Mr. Dorner had done nothing else, he deserves a monument for raising and introducing this. It came out at the same time as Richmond and Albertini, both of which excelled it on the exhibition table, but both fell so far behind it in productiveness that they were soon dropped, while Wm. Scott for many years had no successful rival, until Mrs. Frances Joost appeared. Later, we had Nelson and Genevieve Lord. The famous Lawson then appeared. The introduction of this variety gave a greater impulse to carnation growing than any variety before or since. In many respects it was superior to anything preceding it; it was brilliantly advertised, and best of all, justified every claim made for it. It made Peter Fisher's name a household word in carnation circles, and when he introduced Enchantress, saying that it was better than Lawson, there were many doubters, but Peter was right. We hope he may live to give us more as good or better. The parents of Lawson were Tidal Wave (locally known as Van Leeuwen) and Daybreak, which latter was a distinct and valuable break. Out of Lawson have come several famous sorts, Enchantress, Mrs. M. A. Patten and Nelson Fisher; and Mr. Fisher has a brilliant red on the way. It is certainly a rich strain of blood.

And we are ready for another one of this color. Helen Goddard bids fair to be a winner, and when Helen Gould and Winsor are introduced next year, particularly Winsor, they will certainly prove valuable. I am in love with Winsor; it is just the shade of pink that is wanted, has a vigorous constitution, a fine, stiff stem, and is very productive. I have had no opportunity of seeing Carla—a western variety now being disseminated, but I have heard it well spoken of by competent persons.

Another shade of color which has not very popular may be called very light pink. The first one of these that I was familiar with was Miss Joliffe, a light flesh, tinted with salmon. I knew it well thirty years ago as the best of its class. Later we had Daybreak. This was a very valuable variety, with flowers larger than any which had preceded it and with, for

that date, wonderful, long, stiff stems, and of a very lovely light flesh shade, and unusually productive; for many years the best of its class, but it finally succumbed to disease and was displaced by Fair Maid and Enchantress, both excellent varieties. In fact, I think Enchantress the best carnation, all things considered, ever sent out in this country. It is still very popular, and as long as it continues to be as good as it is now, it will take a wonder, indeed, to displace it. It is a model in all that constitutes a good carnation, and raisers of new varieties should aim to get its qualities in their seedlings. What a boon a clear yellow Enchantress would be!

The Scarlet Class.

But I find my paper likely to take too much of your time, so in considering the important scarlet class, I will pass over them with brief mention. What a demand for this color at Christmas, it goes so well with the holly berries, the cheerful chimes and the general joy! Century was raised in 1878 by the late Charles T. Starr, and while more of a carmine than a scarlet, was very bright and was very useful until the advent of John Thorpe's Portia, which was a brilliant scarlet, and very largely grown for many years. Its color has never been excelled; it was very productive; lack of size was its greatest drawback. Then we had in rapid succession Lady Emma, Alegatiere, Garfield (this is the variety that Donald McCallum called Robert Craig, thinking he had a sport, but after being considerably grown as Robert Craig, turned out to be Garfield), then Estelle, still grown in some sections; G. H. Crane, for years a good one; then America, Adonis, and finally Cardinal. This has proved to be a good one in the western states, but has, so far, hardly come up to expectations in the east; in fact, it has been a great disappointment, producing a large percentage of worthless blooms.

The White Class.

Now, we will briefly consider the white class, so largely used for funerals, weddings and in general floral work. The oldest white one that I know was President Degraw, imported from France about the same time as La Purite, and introduced to commerce by the late lamented Chas. Zeller of Flatbush, the original carnation enthusiast of America, whose stock of more than fifty varieties I had the pleasure of inspecting some thirty-five years ago; carnation growing was in its infancy then. They were most grown in pots, although they were beginning to be planted by a few growers, mostly in solid beds and a few on benches, which is now the most popular way of growing. President Degraw had a long run, many years of popularity. Then came Peerless or Edwardsii, followed by Hinzle's White, Peter Henderson, Snowden, Silver Spray, a good one; Lizzie McGowan, none better in its time; Flora Hill, for a long time famous and still grown to a considerable extent; Glacier, Queen Louise, The Queen, Lady Bountiful, most beautiful (the greatest defect in this fine variety is the tendency to be a shy bloomer in the fall and early winter); white Lawson, and, finally, Lieut. Peary, which, I think, is the most valuable white to date. Yesterday is another

good one, and not as well known as it deserves to be; it is vigorous, early and continuous, very satisfactory with many growers. White Enchantress promises well. The Belle is a very good white with many growers.

In crimsons, which is one of the least important, commercially, we have had Black Knight, Louis Lenoir, Anna Webb, Crimson King, F. Mangold, Seawan, Gomez, Maceo, Daheim, Harlowarden and Harry Fenn; the latter two are the best in this class and are still cultivated.

White Variegated.

The class known as white variegated has been represented by a number of varieties; enjoying a large measure of popularity the best have been Hinsdale, a good variety extensively grown fifteen or twenty years ago. I never saw it better than at John H. Taylor's, Bayside, L. I. For several years he grew it in large quantity: Chester Pride; Variegated La Purite, a sport from the great La Purite; Mrs. Bradt and Lilly Dean, Olympia, Prosperity, M. A. Patten and Variegated Lawson. The latter two are the latest and best. Jessica, which is being introduced this year, looks promising.

In yellow variegated, we have had Astoria, introduced by Wm. Wilson of Astoria about thirty years ago, a fine variety in its day. Then came Chas. T. Starr's Buttercup, introduced to the trade in 1884, and the best one we have ever had; followed by Andalusia and Sunrise and Eldorado, which are now probably both out of cultivation. We need a good, new one in this class.

American Carnation Best.

Now, I have named in all the classes most of those that have been specially valuable in the past and those which are the best at the present time. I have also had the temerity to pick the winners of those being introduced this year. It is interesting to note that the early and free blooming qualities of the American carnation are beginning to be recognized by some of the wide-awake English growers. Among the kinds that have done well over there may be mentioned Enchantress and America. Fair Maid, The Belle and Harlowarden have done particularly well. I recommend our English friends to try Helen Goddard, and, when they are introduced, Winsor and Beacon. Although there is a lack of sunlight in England, the free-blooming American varieties produce some flowers in the fall and winter and in March, April, May and June bloom freely. As the London fashionable season runs into July, there is always a good demand for the blooms. The method of growing, heretofore, in England has been in pots, but the American method of growing on benches has been introduced. Mr. Ditton, one grower near London, has been quite successful.

One thing seems clear: The best of the American sorts are superior in productiveness to any on earth, and equal in form and color to the best anywhere. Although there have been many disappointments, the advances are surprising, almost bewildering, and it is to be hoped that those who have devoted so much time and thought to seedling raising may continue with enthusiasm in the good work and that the number of those

who are engaged may be largely increased, for when success comes to any, it may be enjoyed by all, both professional and amateur, who are willing to participate. We owe much to those who are willing to grow hundreds of seedlings and to test them at great expense for several years in the hope of occasionally getting one good enough to send out. The cool, calculating, sure-thing, business man is not likely to spend much time raising seedlings, but the intelligent enthusiast in the carnation field is always likely to become a benefactor to us all.

CLUB AND SOCIETY NOTES.

The first annual report of the Connecticut Forestry Association is in the hands of the printer, and when completed can be obtained of E. S. Geer of Hartford.

At the meeting of the New Haven Horticultural Society on the evening of Feb. 20, Walter Angus, gardener for H. & H. Scofield, delivered an instructive address on chrysanthemums. A smoker and supper closed the evening.

The Rhode Island Horticultural Society held its meeting in Falstaff Hall, on Feb. 21. The feature of the evening was a lecture by Prof. F. W. Card, on small fruits. A brief address was given by H. G. Breese, a noted fruit grower of Hoosick, N. Y.

The annual carnation exhibition of the Huntington Horticultural and Agricultural Society will be held in the trade school building, Tuesday evening, March 6. The schedule comprises carnations, roses, violets, and copies can be had from President Walter Shaw or Secretary A. H. Funnell.

The annual banquet of the New Bedford Horticultural Society was held in the Mansion House, on the evening of Feb. 21. Frank C. Barrows was master of ceremonies. President William Keith stated that the society had grown from 76 to 110 during the year. A vote of thanks was extended to Messrs. James Garthly, H. A. Jahn and Peter Murray for the flowers furnished for the decoration of the tables.

The Cincinnati Florists' Society will have a special exhibition of carnations on March 10, 1906. Prizes will be offered as follows: Best vase white, light pink, dark pink, red, variegated, respectively, 50 blooms each, 1st prize, \$5.00; 2d, \$4.00; 3d, \$2.00. Best vase seedlings, 25 blooms, 1st prize, \$4.00; 2d, \$3.00; 3d, \$2.00. 100 mixed, not less than 6 commercial varieties, 1st, \$8.00; 2d, \$6.00; 3d, \$4.00. Best general display, \$10.

OBITUARY.

Samuel Hartwell, a prominent fruit grower of Lincoln, Mass., died on Feb. 21, aged 72 years. His death was caused by pneumonia and followed the demise of his wife by but ten days. Mr. Hartwell was an active member of the Massachusetts Horticultural Society for forty years, serving a long time on the vegetable and fruit committees. He was a conscientious, kindly man and enjoyed in an exceptional degree the esteem of his associates in the horticultural society and his fellow townsmen. He held many official positions of honor in his native town.

CARNATION BREEDING

(C. W. Ward, Queens, N. Y., before the Pennsylvania Horticultural Society, Feb. 20, 1906.)

The Original Carnation.

The original carnation known to history for some 300 years before the Christian era was a five petal single bloom about one inch in diameter of a pinkish mauve color. In its original state it grew generally throughout the southern portion of Europe, being found in abundance in Normandy, France, whence it is believed by some historians to have been introduced into Great Britain. So recently as 1874 it was found covering the Castle Falsie in which William the Conqueror was born. It was described by Theophrastus as early as 300 B. C.

The Materials and Tools of the Present Day Breeder.

The present carnation with which we are working is the product of several centuries of culture and hybridization. It is an open-pollinated species and mother plants can be used from the hybrid plants as well as in breeding upon the same plants or upon the same variety. Once secured from seeds, a variety is easily perpetuated by propagation from cuttings which are secured in abundance and may be easily rooted. Improvements in varieties may be made in bud selection and bud variation as well as from seed variation due to hybridization. In raising varieties from hybridized seed, very few improved sorts are produced, the proportion being about one good variety for each 5000 hybrids grown according to present standard.

Up to the present time, I have been breeding for color alone, basing my work upon the theory that any laws developed in color work would hold good when applied to the development of other desired qualities.

The tools which I use in my work are very simple, indeed, consisting of a pair of delicate tweezers and a microscopic magnifying glass. The method employed is to find the anther just bursting so that the pollen is in a condition of dry powder. The anther is removed by means of the tweezers and the pistil of the flower desired to be fertilized is lightly touched along the entire length by the pollen bearing anther.

Color Classification.

In order to do my work with reasonable method, I have divided it into sections as follows: (1) Crimson section, comprising crimsons or scarlet maroon in color; (2) dark pink section, which comprises all rose, cherry and deep pink tones; (3) light pink section, which comprises the light salmon or day break tints; (4) scarlet section, which comprises all other colors which may be termed red or scarlet; (5) white section, comprising only the creamy white and snow white tints; (6) yellow variegated with scarlet, crimson or pink upon yellow grounds as the yellow varieties are al-

most invariably marked with pink, scarlet or some other tint; (7) white variegated section comprises varieties with white grounds and light pink, scarlet or crimson markings; (8) the blue section comprising varieties showing some tendency towards a blue in color. This last section has not as yet produced anything that might be termed a blue as invariably there is enough pink in the makeup of the color to shade the tone into purple or mauve. The crimson, dark and light pink, scarlet and white sections have been fairly well fixed, but the yellow, white and pink variegated, and blue sections will be very difficult to fix, as they are essentially mosaic and there is a constant tendency toward variation in all hybrids produced from them.

Origin of an Important Variety.

The bulk of my profitable varieties can be traced generally to the variety General Maceo, which was the result of a cross between the English variety, Winter Cheer, and Mr. Dörner's American variety, Meteor. The original plant of Maceo had a very peculiar habit, being almost a climber and was dug from the frozen ground after all supposed good sorts had been taken in from the field, its only recommendation being an intensely colored large bloom on a plant having a habit somewhat resembling a creeping grapevine in growth, but by selection from bud variations, it was built into an immensely profitable commercial variety.

In hybridizing carnations we sometimes meet with what is termed seed sports. These have been invariably light pink varieties (more or less marked with crimson edgings and stripes) that have been produced by crossing crimson sorts which had comparatively pure crimson pedigrees for several generations.

Aside from its commercial importance, there is a sentimental side to carnation growing. The production of new hybrids which are distinct improvements upon existing sorts is always a pleasure and serves to keep one thoroughly interested in the "Divine flower" and amply repays for the close application necessary to produce practical improvements.

How I Commenced Carnation Culture.

Some fourteen years ago, while walking down Broadway, New York city, a Greek flower peddler pushed under my nose a bunch of clove scented carnations. The delicious fragrance reminded me vividly of the old home garden with its little plats of Paisley pinks, and I became at once interested in the blooms and being at that time out of business, I took up the growing of carnations, believing that if chrysanthemums, roses and other flowers could be improved by hybridization and culture, the carnation must respond to similar methods, and in this view later experience proved that I was not at fault.

Commercial Importance of the Carnation.

At the present time the commercial value of the carnation grown in this country has risen so that the calling

may be considered one of the substantial professions. The annual value of the carnation product reaches five to six millions of dollars, when we consider the sales of both plants and flowers, and the capital invested possibly may amount from fifteen to twenty millions of dollars, taking into consideration the value of the real estate and buildings devoted to carnation culture.

The improvement in the carnation which has resulted in giving us flowers three times the size that they ordinarily were with stems four to five times as long, has produced a general advance in the price of the carnation, which seems to keep pace with the increased demand. When I first undertook the growing of the carnation, 50 cents to \$2.00 were considered the retail prices. At present, \$2.00 to \$6.00, sometimes \$8.00, and, in rare instances, \$10.00 per dozen are secured. When I first entered the business 50 cents to \$1.00 and from that up to \$4.00 per hundred as the maximum price were the wholesale rates. At present \$2.00 to \$15.00 per hundred are the ruling prices, and at certain seasons as high as \$25.00 per hundred are secured for the best and most perfect blooms.

We have about two acres under glass devoted to carnation growing, the annual sales from which run from \$30,000 to \$36,000, noting a fair annual profit of \$10,000 to \$12,000.

Naming New Varieties.

The naming of a new carnation is quite a puzzle to the originator, and he usually selects the name of some beautiful lady, some particular friend, some important personage, a bird, the name of a planet or something that will serve to describe or produce an impression of the characteristics of his flower. In naming my own productions, I have honored some of my seedlings with such names as the President, Mrs. Roosevelt, Governor Roosevelt, Viola Allen, Elso Struss, Alma Ward, James H. Manley. The Cuban Patriots, General Maceo and Gomez, and your own townsman, Robert Craig.

The Carnation in Politics.

The carnation has frequently been used in a political sense. It was the McKinley emblem and the campaign flower during the campaign which elected McKinley and Roosevelt, and during that campaign the various carnation growers throughout the country donated many thousands of flowers to decorate the button-holes of those marching in political parades. At the present time the American Carnation Society decorates the grave of the lamented President with carnations on the 29th of January every year.

The carnation is extensively used as a decorative flower. It lends itself to almost every use in which flowers are suitable. Its varied and delicate colorings, its magnificent, pungent, refreshing odor and its long keeping qualities render its probably the most valuable of all florists' flowers, excelling even the up-to-now Queen of Flowers, the Rose.

MICHELL'S ECKFORD STRAINS OF SWEET PEAS

ESPECIALLY FOR FLORISTS' GROWING

The varieties we list below are especially selected for cutting having long stems and are the largest flowering types of the newest and best sorts.

NEW CHRYSANTHEMUMS

(Read before the Morris County Gardeners' and Florists' Society, Feb. 14, 1906, by C. H. Totty.)

Being the sponsor for so many of the new kinds, in the sense that I am introducing them to the trade, I should have been better pleased had some one else, who could not have been accused of "having an axe to grind," essayed to write this paper. However, many of you saw the kinds in flower at our local show, so if I get too enthusiastic you can easily bring me back to earth. It has been asserted that while American raisers of new varieties concede the palm for size to imported kinds, yet the American varieties are the only ones adapted for average commercial culture. Is this statement true? I say, hardly so, because a walk through the New York out-flower district during the chrysanthemum season shows us the following kinds shipped in, in quantity, and all of them are imported varieties: October Sunshine, Alice Byron, Cheltoni, Nellie Pocket, Mrs. Coombs, and our own great and only Wm. Duckham. There are others, but I have quoted enough to show that the foreigners do get a show in the wholesale markets of the country. I have had it stated to me that Timothy Eaton is an English variety, instead of a Canadian seedling, but, in the absence of any proof, I refuse to credit it. The fact is, that a valuable new variety may originate in any country, but in the case of some raisers, the French, particularly, one has to buy so much chaff to find even one grain of wheat, that the game is not worth the candle.

It has been stated that the reason the Australian varieties do so well here is because they are accustomed to strong sunshine, and being grown and flowered entirely outside, have more natural vigor. I am just now collaborating with a hybridizer in California, where, I understand, almost identical conditions exist, and if it is a matter of climatic conditions, we hope to be producing some Wm. Duckhams and Beatrice Mays in a year or two. The strongest reason, to my mind, why the Wells-Pocket kinds have done so well is because of the rigid selection of the best kinds from an immense number of seedlings. Thus the present list, Mrs. Partridge, Mrs. Heaume, Mrs. Knox, G. J. Brooks, etc.—some twelve kinds in all—are the picks of over 97,000 seedlings. In the face of a pruning down like that, one would say they must be all wonders, and, candidly, I think they are the best list this firm has ever sent out. How different this wholesale method from the conditions under which our own hybridizers have to work, where the plants are grown inside, taking up valuable space, and a few hundred seem a very large batch to handle.

Hybridizing is largely a gamble anyway, and a Col. Appleton may appear in your own dozen plants, but the chances are against you, and the law of averages will tell in the long run. In looking over the new things of the year we will give first place to the American seedling, Morton F. Plant. This made its first and almost only appearance at our local show, and we should be duly proud of this fact. This coming year, when the experts from other localities have it to

work with, some phenomenal flowers are bound to be shown. An improved V. Morel, but twice the size that I ever saw Morel, and we have in a few words a very good description of Morton F. Plant, with the addition that the foliage and stem are the facsimile of Col. Appleton. Honor to whom honor is due, and we owe a good deal to the Daillidouze Bros. for this grand variety.

Next on the list is Beatrice May, and she is certainly a beauty. This variety has developed one serious fault, from my point of view, which is that she is altogether too shy and modest in producing stock, making the dissemination too slow and unsatisfactory. I had hoped to make some money out of Beatrice, but, in the language of the poet, "Twas ever thus since childhood's hour, I've seen my fondest hopes decay"—and a most vigorous hunt over three continents fails to reveal any stock worth speaking of. As a keeper, this variety is second to none. It kept three weeks on the plant, with me, in perfect condition, and some of the flowers, after being exhibited and scored by the C. S. A. committee, kept in water some three weeks longer. The way Beatrice May finished up with me last year was about as near perfect as I ever expect to see a white chrysanthemum. Perhaps the next best thing as an all-round variety in its color is Mrs. Henry Partridge. Red varieties are almost without exception prone to burn in the bright sunlight, but Partridge will not damp one petal. Almost everyone likes W. R. Church, but so many complain of its poor growth; Partridge will give you the Church color, and, in addition, is a grand stocky grower. I tried it on every bud from Aug. 10 to the end of September, and it was good on every one, the late buds showing, as was natural, a much thinner flower.

Another very dwarf variety which showed color similar to Partridge on first opening was Mary Ann Pocket, but it soon faded to an Indian red. This variety was so very dwarf that I did not take any notice of it all summer, and the flower, when it developed, was a most agreeable surprise. Mary Ann Pocket will be a very valuable variety to grow in pots or on a front bench when head-room is limited.

While on the dwarf varieties—and the splendid dwarf habit is one of the strongest qualities of the Wells varieties every year—I would mention May Seddon. It had no chance to prove itself this year, as my stock did not come till late, and it is so dwarf that it must have a very long season of growth to do it justice. Do not, I beg of you, keep on propagating this variety too late this year; give it a fair show, and if it comes with you as it has been grown—11 inches across and 11 inches deep—you will have a prize winner in the white classes. Mrs. John E. Dunne is a fine grower and a fine variety, one that will give you a 100 per cent. good flowers. The color is old rose, very striking and beautiful and reminds me of the old Chenon de Leche, for years a great favorite of mine. Dunne will run up 4 to 5 feet

with good culture and a crown-bud around Aug. 20th will give you the best flower. Another sterling sort, in that every flower comes good, is Mrs. G. Heaume, a splendid clean grower 3 to 4 feet high. The color is pretty much the shade seen in Queen Alexandra, a salmony bronze, one of the kinds commonly called off-colors, but I am free to confess that everyone that saw it in my houses liked it.

Mrs. Wm. Knox when first expanding looks distinctly an aristocrat, as every petal falls naturally into its own place, but I am sorry to have to confess that the neck is hardly long enough to hold erect the large spreading flower. In the short vase classes it is a winner, as it gives a flower with as large a spread as F. S. Vallis and a far neater appearance. T. Richardson is an immense grower and will make a stem like a young tree. Do not over feed this variety, as it has such tremendous root action that it is easy to overdo it. The color is the same shade as an Enchantress carnation, a point to be considered when classing it as a pink. A bud the last week in August is to be preferred to an earlier one.

Mrs. F. F. Thompson was called the most artistic flower in the Philadelphia show, and if it were not necky, I would say go on it largely. In the short vase classes or classes where a support is allowed, it is one of the most striking varieties ever set up. We have had varieties before that have been termed Ostrich Plumes in the exquisite twist and curl of the petal. Mrs. George Beech will be a sterling sort for the commercial grower and while rather late for an exhibition flower is far ahead of Yellow Eaton and other of the class for November shows. I notice it mentioned very prominently in English periodicals as a grand Christmas variety. Beech is a yellow sport from Mrs. Swinburne, a variety that you may recall I sent out last year, and which will be largely grown next year as a late white, as it has made good everywhere. Leslie P. Ward, which is named after our patron and fellow townsman, is one of the most beautiful combinations I have seen, being old rose with golden tips to the petals. It is an Australian seedling and was exhibited as No. 50. To get the lovely color of this variety at its best, do not take a bud before Sept 1st if you can help it; earlier buds, while they produce larger flowers, do not show such fine color. M. G. Rivol is a French sport from Paola Radilli, which was a fine thing but a poor undecided color. Rivol is a fine deep yellow, deeper in color than Col. Appleton, and will be of good service, as growth is firm in every way.

There are several other good kinds in the Australians—G. J. Brooks, Merstham Crimson, and W. Wells—but time and space forbid of my going into them in detail. The last named will probably show up much better this coming season than it did last, because stock was limited and I experimented over a wide range of buds to find the best one.

The introduction of other disseminators I cannot take up with any de-

Dreer's Select Sweet Peas

HARDY FLOWERS.

"Hardy Flowers" was the topic which came in for considerable discussion on February 17 in the lecture hall of the Massachusetts Horticultural Society. The discussion was introduced by E. O. Orpet, who read an interesting paper on this subject.

Hardy plants, he said, appeal to almost everyone very largely on the ground of sentiment; for there is scarcely one of the more familiar flowers that has not some particular association with childhood days. There was a time when hardy varieties were rather out of fashion; but they are again coming to the front, and today one finds a great many more in use than formerly, varieties which have been transplanted from their wild environment. It is most unfortunate, he affirmed, that wild flowers are often despised, for they are capable of splendid development and many of them are very beautiful. There was a difference of opinion, he said, as to whether hardy plants should be massed together or used separately in gardens, especially in border effects; but it is essential that tender plants, annuals, for instance, be used in conjunction with hardy ones.

Of course the question of soil is of the greatest importance, for it is a difficult task to make all kinds of plants thrive in the same soil. In all cases the soil should be prepared quite deep, for in this way they much better withstand a drought. He called attention to the curious feeling of dislike that existed among people for such colors as purple and mauve; and he thought it a great mistake that flowers of these hues were eliminated from gardens as they sometimes are. In hardy borders bulbs are getting to be quite popular and he instances the narcissus of which there are many varieties which are splendid for planting in masses for spring blooming. Of columbines there are only three varieties which he would recommend for cultivation. They are the common North American species to be had in red, yellow and blue. None of the hybrid varieties is equal to them. Of larkspur he did not care much for the annual variety, but the perennials were good and vigorous, although they were frequently subject to blight which might be overcome by

careful attention. Irises were among the very best of garden plants and peonies have become enormous favorites of late years. In fact people are peony crazy, he said.

Garden phlox is indispensable in a well-arranged garden; but he recommended that the flower stalks be cut down early; if not they are apt to go to seed and the stronger varieties crowd out the weaker ones. Hardy pyrethrum, he remarked, was very popular, and the single ones are more advantageous than the double ones, as they maintain their erect position after the rain, while the other ones become top heavy. The lupine was another indispensable variety, the only trouble with it being that it was apt to die down about the time a garden was at its height; but this could be overcome by planting an annual variety whose flowers are at their best late in the season. In considering the numerous lilies he referred to the California species as most beautiful, but not adapted to the Eastern climate. There were many plants which are commonly supposed to be hardy which have to be most carefully looked after during the cold weather, and he included in the list the Canterbury bell and even hollyhocks, which should always be protected against frost. The coreopsis was another which needed some similar protection.

The speaker referred to the great number of varieties which we are getting from China, some 3000 such having been introduced of late. He believed that both Russia and Siberia would yet prove fertile fields for the discovery of new botanical specimens. He paid a tribute to the work doctors have done for horticulture, noting the fact that a great many surgeons have been good botanists and there are thousands of plants the knowledge of which we owe to medical men.

WALSH'S "LADY GAY"

The sensational rose at the Temple and Regents Park Shows, London, England, May 29 and June 1, 1905.

PHILADELPHIA NOTES.

Mr. and Mrs. Jno. Westcott and grandchild left Philadelphia for a two weeks' sojourn in the Sunny South Feb. 26. Among other places they will call at Neptune, Fla., where John's old friend and partner, Abram S. Pennock, makes his winter home with his son, Henry.

Mrs. Lank (nee Edna Craig) arrived in Philadelphia after a six months' sojourn in Mexico with her sister, Mrs. Graeff (nee Mamie Craig), on Feb. 26, much improved in health and glad to see the green banks of the Delaware again.

The Leo Niessen Co. have been fortunate the past few weeks in being long on orchids. *Calogyne*, *phalaenopsis* and *cattleya* are among their specialties that have been appreciated.

Harry Bayerslorier had a birthday celebration at his home on Diamond street on the 25th inst.

The William Graham Co. are contemplating the purchase of the Hugh Graham conservatories. This deal if consummated will give them, combined with their Olney establishment, one of the largest retail ranges in the country.

Paul Huebner, who has the reputation of being the best railroad gardener in the country, will give an address on railroad gardening before the Florists' Club on Tuesday evening, March 6.

Ficus pandurata and *Marguerite Queen Alexandra* are two sterling novelties which the Robert Craig Company are now busy working up a stock of.

We had the pleasure of a few days' visit in Philadelphia from Harry O. May of Summit, N. J., last week.

Jno. Pappey, late foreman for Gustavus Hanson, Harrisburg, is now with Borneman & Co., Lansdowne, Pa.

Christian Eisele has a new double white variety of the golden feather (*pyrethrum*) which he thinks well of. It is purer white than the feverfew (*matricaria*) and is very attractive for edgings.

Harvey & Sons of Brandywine Summit have just contracted with Lord & Burnham Co., through D. T. Connor, for a new addition to their already extensive establishment.

BUSINESS CHANGES.

J. Schuncke of E. North avenue, Baltimore, Md., has leased the stall in Lexington market from F. N. Powell, and will devote it to potted plants and cut flowers.

Edward H. Rust of the Palm Place nurseries at South Pasadena, Cal., has doubled his greenhouse area and has started a new sales yard and nursery of extensive acreage at the near-by new town of Corcoran. At the latter place he expects to grow grapes and general deciduous fruit stock on a large scale, while tender ornamentals, both indoor and out, will be grown, as heretofore, at South Pasadena.

WHOLESALE
GROWER of CUT FLOWERS

VICTORY

The most prolific of scarlets, is a fancy in the fullest sense of the word, requires only ordinary culture, wholesaled at \$25.00 per 100 at Christmas.

CUT FLOWER MARKET REPORTS.

BALTIMORE The greatest trouble here of late has been to get sufficient up-to-date stock. Roses and carnations have been very scarce, but violets are in line to meet all demands. Easter stock is ahead of time and it is impossible to hold it back. Some few Bermuda lilies are coming in, but they are not as good as in former years. Weather conditions are somewhat to blame.

BOSTON Trade is falling off rapidly; Ash Wednesday called the turn. It is nothing new; only history repeating itself. Flowers are plentiful—bulbous flowers embarrassingly so—and some of them, notably daffodils, selling at unprofitable figures. Lily of the valley is very slow and violets are accumulating. American Beauties, the long stemmed sort, have been very scarce and are not yet numerous, but indications are favorable for a better product ten days from now, just in time for the rose show. Carnations are of good quality but show evidences of a superfluous quantity in reserve; slowly but surely they are coming on and values must drop. The cold wave of Ash Wednesday was a lucky incident for it curtailed promotion and thus saved the day for the wholesale trade.

BUFFALO The past week has been a busy one for all. Many social events being held made the demand good on flowers. Violets were good sellers as well as Beauties and other roses, but not too many were had. Carnations were in heavy demand nearing the end of the week, prices holding the same as previous week. Narcissus and other bulbous stock was too plentiful at times, prices weakening to some extent. There was a good supply of greens, which sold rapidly.

DETROIT The remarkable steadiness of business this season has been singularly beneficial to all growers as well as the commission man and retailer. Bulbous stock comes in large quantities, but none too plentiful except in the case of yellow, which is in surplus. Pink and white roses have been scarce at times and Beauties are always scarce here. Violets, sweet peas, lily of the valley and callas find a ready sale, and carnations do not linger much as yet, the wholesalers experiencing no trouble in

keeping the prices steady. Washington's birthday brought a good demand, white being used mostly for that occasion. A more timely arrival of stock at the commission houses would be a great improvement over the present system. For the retailer it would save much valuable time both in the buying of flowers and the filling of morning orders. It would serve to break up the grabbing now so unavoidable. The many shipments arrive somewhere between 11 and 12 a. m. It would be greatly to the advantage of all if the growers would arrange for early shipments. The wholesalers could use a better system and the retailers would do better business by filling orders promptly while the growers would come in for their share of the profits thereon.

LOUISVILLE Business conditions the previous week were somewhat slow. Carnations and roses of good quality were in good demand, and the supply was satisfactory. Lily of the valley was satisfactory in supply and demand, the quality being very good. Violets, forget-me-nots, mignonette, etc., found excellent sale. Jonquils, tulips, hyacinths were plentiful.

NEWPORT The market all last week was strong in supply and demand. The stock coming in day by day was of excellent quality and the demand seemed just right for that class of goods. Roses and carnations were in particularly strong call with prices stationary, perhaps because of the knowledge that much more good stock was expected in. Bulbous stock is coming in a little too heavy in volume, and the trouble is that instead of a letup we may expect the reverse for this week and the next and the next. Tulips are exceedingly good as seen in some of the windows. Violets are more plentiful. Lilies are making their appearance known in several ways. Flowering plants are scarce even yet.

NEW YORK A tour of the wholesale sale houses disclose the fact that mid-winter conditions in the cut flower trade are over for the year. Consignments on all sorts of material are much heavier, and are growing more so every day, and the tables are piled high with tulips, daffodils, freesias and similar stock, which can be sold only at a sharp cut below even the minimum quoted prices. Lent went into effect this week, and for a time at least may be expected to add its influence to further depreciate market values. In some respects the season now closing has been a great improvement on its recent predecessors. A healthy tone has prevailed and values have fluctuated less than usual, the sales at low figures generally being of stock of inferior quality, and the retail stores have all apparently prospered, complaints of poor business being conspicuously absent.

PHILADELPHIA Notwithstanding the holiday, business for the week, 19th to 24th, was very fair. Beauties were still scarce and brought 60 to 75 cents for fancies. Short-stem Beauties, where the flowers were good, sold on sight. Brides and Bridesmaids were very much more plentiful, especially in the highest grades, and prices eased a little, with a good deal left over, on which prices had to be sacrificed. Libertys were scarce. Chateaus very good and quite plentiful. Killarneys were also a good deal in evidence. Carnations came in in immense quantities, but prices held fairly well, largely on account of the fine quality. Lawson, Prosperity, Enchantress, Flamingo, Patten, Queen and Maryland were the leaders. It is presumed that very little Prosperity will be grown next year. Violets fairly plentiful and brisk demand. Lily of the valley and bulbous stock a little slow. Sweet peas were fine and sold well. The freesia crop is short-good stuff. The freesia crop is shortening up a little. Callas, Harris and white lilac help out the variety of subjects on the market and come in handy. The new Marguerite, Queen Alexandra has made quite a hit on the market here.

WANTS.**Position Wanted**

The undersigned is open to engage with lady
or gentleman requiring the services of a thoroughly
experienced and competent gardener capable of
taking charge of a first-class private place. Euro-
pean and American experience in commercial
gardening, public parks and nurseries, and would
consider propositions in that connection. Best
of references as to character and ability. Address:

WILLIAM TRICKER, Narberth, Penna.

WANTED TO RENT—Three or four
greenhouses and grounds in the vicinity of
Boston. Address M. B., care of HORTI-
CULTURE, 11 Hamilton Place, Boston.

WANTED—A first-class Fern Grower, one
who has had experience. Good wages,
steady position. Send references. R. H.
N., care HORTICULTURE, 11 Hamilton
Place, Boston.

WANTED—For a large private place, a
first-class man as inside Foreman. Must
have European experience in some of the
best places. Apply, with copies of testimo-
nials, to H. W., care HORTICULTURE, 11
Hamilton Place, Boston.

WANTED—First-class man to take
charge of a city flower store in fashionable
district. One capable of making fine table
decorations and waiting on critical cus-
tomers. Salary \$20 per week to right man.
T. W., care HORTICULTURE, 11 Hamilton
Place, Boston.

WANTED Manager in a plant-shipping
department of a large commercial estab-
lishment. None need apply unless experi-
enced in overseeing men, handling palms,
bedding plants, etc. Married man pre-
ferred. State wages wanted. Also a po-
sition for an assistant. L. Company, care
HORTICULTURE, 11 Hamilton Place,
Boston.

I find the Fumigating Kind Tobacco Powder the cheapest and best insecticide on the market; it does the work every time; no burning or injury to your plants.

G. THEILMANN, Marion, Ind.

Why not ask for a free five pound trial sample; its convincing, it only costs you the express charge. It's no new fangled thing, hundreds write of it like Mr. G. Theilmann. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOOTHOFF COMPANY, 119 West Street, New York City, N. Y.

NEWS NOTES.

Snowdrops have been blooming all through the month of February in the vicinity of Boston.

Joseph A. Manda is seriously ill with typhoid pneumonia at the Memorial Hospital, Orange, N. J.

The F. R. Pierson Company have a daybreak sport from Lawson carnation which will be introduced next year.

George M. Kendall has taken a lease of the greenhouses of the Pollard Estate, Leominster, Mass., for cucumber growing.

Robert Paterson of Waverly was the winner of the prize of \$10 for getting the largest number of membership applications for the Gardeners' Club of Baltimore during the year.

Palmer's Red Lawson carnation is giving great satisfaction wherever grown. The variety seems to grow a trifle taller than Lawson, and the flowers are decidedly superior in form.

R. T. Fisher, forester, has outlined a scheme for scientific wood-cutting on the Wachusett Mountain reservation in Western Massachusetts, which while making way for roads and trails to points of scenic vantage, shall yield an income to the State. The Commissioners ask for \$12,000 to rebuild the summit house, and \$5000 for acquiring additional lands to protect the reservation.

The new carnation Winsor, is making a record that places it far in the lead as a producer. From the two thousand plants of which Mr. Pierson's stock consists, there have been taken twenty-one thousand cuttings this winter, no less than five thousand blooms have been picked in the month of February, and at the present time the plants are full of buds and bloom, averaging twelve to fourteen each.

Mr. Myer, whose establishment is one of the latest additions to the list of

fashionable New York flower stores, sends us a description of his unique table decorations on the occasion of a dinner given last week in honor of an eminent New York gentleman. The centre of the large quadrilateral table was laid out in the form of an Italian garden in miniature, the lawn effect being carried out by the use of a rich grass green carpet on which the plant groups were placed. The arrangement of cut flowers around the border of the table was in keeping with the formal character of the centre decoration.

ANNOUNCEMENT

BY
HITCHINGS & CO.

WE are pleased to inform our friends and patrons that we have resumed business under our old and well-known firm name of Hitchings & Co., with sales offices at 1170 Broadway, N. Y. City. General offices and Works at West Side Ave., Jersey City, Foundries and Boiler Shops at Garfield Ave. and Union Street, Jersey City, N. J. The Officers of the Company are E. W. Hitchings, President; Charles Armitage, Secretary and Treasurer; William Sefton, Sup't of Works. In addition to Hitchings & Co.'s former manufacturing plant, we have acquired the Pierson-Sefton Co.'s new factories, and their entire working force, consequently we are in a position to largely increase our production.

We trust our friends will favor us with the same liberal patronage and confidence we have enjoyed for so many years.

Comparative Cost of Posts and Cast Iron Foot Pieces.

Now suppose you place wood side posts every 4 feet two inches to the centres, at a cost of not less than 80c. to \$1.00 a post. The cast iron foot piece we put every 8 feet 4 1-2 inches to the centres at a cost of \$1.85 each—just half the number of foot pieces—just half the number of post holes—just half the time and bother of lining up—just half the amount of paint—just half the amount of shade.

Here's How it Stands

1 Foot Piece	\$1.85
2 Posts at 80c. each	1.60
Apparent extra cost of foot piece25

GREENHOUSE DESIGNERS
and MANUFACTURERS

1133 Broadway, cor. 26th St., N. Y.
Boston Branch: 819 Tremont Building.

But—what of extra post holes, the cost of concreting, extra time, extra paint, the quick rot, the increased shade—the liability of sagging?

Isn't it a case of weakness at the very place it should be strongest?

U-BAR VINERY

U-BAR GREENHOUSES ARE THE BEST GREENHOUSES BUILT

No other form of greenhouse construction compares with the U-Bar type for lightness, strength, durability, adaptability, simplicity, and conformity to all horticultural and architectural requirements. It is a clear departure from the old methods of construction and a great step in advance. A prominent gardener writes us, "My predictions are that all up to date horticulturists will demand this type of construction in the future." With those anticipating the erection of a greenhouse, we will be pleased to correspond or have representative confer in person.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

Phalaenopsis

These beautiful "moth orchids" may not inaptly be termed the aristocrats of their class, combining as they do superior qualities with the fastidious defects, born of a too sheltered environment. Exquisite! We are all agreed, but too delicately nursed for this utilitarian age; this no doubt is the feeling of the democratic florist with regard to the plants though he may think with regret of their lasting cut flower value when a specially choice arrangement is on hand. For many reasons they will always be sweetly select but no private collection can be complete without a few of these lovely plants.

True epiphytes, they are found at home, growing on trees, overhanging streams in the Malayan islands and being without pseudo-bulbs they have always been difficult to collect and import in good condition; now and again batches of nice young plants with fresh leaves may be seen at the auction rooms tied with moss to sticks but in this state they require careful handling to restore them to pristine vigor. It is safer to begin with established plants.

A suitable quarter for *Phalaenopsis* is sometimes difficult to find; many leading growers after building a special house for them have not met with complete success; the fact is proved that an old house with its peculiar humid flavor suits them best; they flourish better also under a thick glazed roof which safeguards them against excessive light without obscuring this very essential element; too much light they will not stand or the leaves will spot, turn yellow and drop off, and always on hot days a heavy shade is necessary. They may be suspended or placed upon an elevated staging with a saucer under each plant. Delighting, as they do, in plenty of moisture especially in growing season, they should not be kept soaked in winter or dull days, taking care also that water be not dropped into the hearts of the leaves; though they like an airy position, cold draughts and sudden changes of temperature must be carefully avoided. Teakwood baskets are the best receptacles, but orchid pans may be used; baskets should not be too large, as the flat-shaped roots stick most tenaciously to the wood. The whole thing, later on, after being carefully washed out may be transferred to a larger basket without danger. After good drainage, nice fresh sphagnum and a few bits of charcoal only are needed as compost. Temperature should not drop to less than 65 degrees at night in winter or the plants will suffer. In foggy districts the glass must be kept clean as in winter the flower buds are liable to turn yellow and drop off. Cockroaches must be carefully sought at night as they are very partial to the fleshy roots and young flower spikes.

They can rarely be propagated by division and raising plants from seed is of course a slow and scientific process, but *P. Luddeimania* will produce young plants freely on the old flower spikes, which for this reason may be left on the plants. Flower spikes, however, as a general rule should not remain too long on any but the most vigorous of any variety or the plants will be weakened, but, as they last a long time cut if placed in water, this is not a serious disadvantage.

P. amabilis, a large white flowered variety of much charm, is often described as the "Queen of Orchids." *Schilleriana*, however, is perhaps the best all round plant of the species, having beautifully marked foliage and flowers of a soft shade of pink and rose, wonderfully free and graceful in form. *P. violacea* is deliciously fragrant and a good type of the short-flowered section. The whole native family make up about three dozen varieties with a few hybrids of great rarity and beauty. All are worthy of cultivation, though there is a wide range of quality between them. With a complete collection flowers of this beautiful class may be enjoyed almost the year round.

Edgar Elvire

Tree Ferns

(See Frontispiece)

Among ferns and other plants I think there is nothing more imposing than a well-grown tree fern. They are of hardy, some of very hardy constitution and do not suffer from being shifted around. In summer, for tropical effect in the shade, they are a sight and yet with the exception of a few *Balantium antarcticum* and *Alsophila australis*, there are hardly any to be seen in commercial establishments. Young tree ferns are also of great value for general use; they are good keepers, quick growers, and when grown from spores are soon of salable size.

Tree ferns are to ferns what trees are to shrubs; they have no woody trunk and do not grow in thickness in the way that trees do. The trunk of most of the tree ferns is produced by the agglomeration or overlapping roots which grow around the spongy part of the center of the fern from the base of the new fronds growing from top to the bottom over those already there and giving the trunk the thickness required to its height. Those that grow more than one frond at a time make more roots and have generally thicker trunks than those that grow one frond after another. Those roots that form the trunk are alive and have to be kept alive by moisture, for the well growing of the plant.

Tree ferns should be grown in relatively small pots or tubs so as to keep them of a convenient size; if planted in open ground in a conservatory some of them soon grow too big, and reach the roof. Those from the tropical regions, that grow very quickly, have that inconvenience; when that happens they have to be cut back about half their height, like a big cutting, in the spring before they start their growth, and have to be treated like newly imported trunks, but they become soon re-established. The bottom part can be thrown away. With a few exceptions they do not grow any side shoots from the trunk.

On both sides of the equator and in the Southern Hemisphere tree ferns are found in all their beauty in a wild state. In Australia and New Zealand are found the most useful and hardy ones, with heavy trunks and big crown of numerous fronds of very strong texture. The trunks of these species, which are nearly all covered with a thick layer of roots when imported, grow more easily than those from the tropical region which are of a different constitution, the trunk being of a drier nature, with less root covering, and can not stand so much traveling. They dry out quickly and the tops being very soft, rot on the road and give much more trouble to bring them to life again.

It is certainly too tedious to raise them from young plants to perfect ferns, therefore trunks are imported and when shipped in the right time—that is, after their last growth of the season, when they are ripe, dug out or cut off the required length, the fronds cut off, and let dry for a few days before they are packed without soil in ventilated boxes in shavings—they generally arrive

in good condition. As said before, those from the tropical regions require more attention, and if sent in the growing season their loss is nearly certain.

To bring those imported trunks to life again, the best way when they arrive is to put them under a bench in a warm house on a layer of moss and keep them there for a couple of weeks slightly moist, after which time the root taps begin to work, and they can be potted, in pots that allow of about three inches of soil space between rim and trunk; the soil must be of fibrous nature. After being potted, they have to be kept in a warm shady place to start the growth, the trunk being sprinkled three or four times a day.

Like all other ferns, tree ferns are classified in genus after the form of their fruit dots or indusium: *Alsophila*, *Cyathea*, *Dicksonia* including *Balantium* and *Cibotium*, *Hemitelia*. The ferns belonging to these genera are not all tree ferns; in *Dicksonia*, for instance, there are many species which make no trunks or stems; our *Dicksonia* (*Dennstaedtia*) *punctilobula* is an illustration.

There are about two hundred different tree ferns known but very few of them are in cultivation. Here are a few of the most common:

Dicksonia (*Balantium*) *antarctica* is the most seen and one of the nicest; has a crown of fronds sometimes as numerous as fifty together; the short-stalked fronds are from three to six feet long, and about two broad, of a very heavy texture, dark green on top and light underneath; the stalks of the young fronds are covered with long, narrow, brown scales; has a nice regular thick trunk. It is one of the hardiest of the tree ferns, often covered with snow in Australia, its native country.

Dicksonia squarrosa from New Zealand has a flat crown of numerous fronds of heavy texture and of a dark, shining green color; the stalk is covered with numerous black hairy scales.

Dicksonia (*Cyathea*) *Youngiæ* from New South Wales resembles much the preceding. The stalks are covered with light brown scales. These two species, which have slender trunks of a dry nature, have the peculiarity of growing young plants on their surface.

Cyathea dealbata from New Zealand is a very nice and hardy tree fern. The fronds are about six feet long and nearly white underneath with reddish spore masses, which give them a distinct appearance. The trunk is strong.

Cyathea medularis from New Zealand is the biggest growing of the cold tree ferns; the fronds, not very numerous, are about ten feet long in developed plants; the stalks are of jet black color, and in the young plants they are covered with dark brown scales. It is a quick grower and soon makes a big specimen.

Cibotium Schiedei from Mexico has been lately extensively grown from seedlings in this country and some good specimens can be seen. They seldom grow trunks more than two feet high; the long drooping fronds, which grow of big size, are of a light yellow green color, glaucous underneath, of a very graceful effect; they are long-stalked and the stalks covered with brownish hairy scales.

Cibotium princeps (*Cyathea insignia*) from Cuba and New Mexico is a very big-growing stove species;

the fronds not numerous, sometimes twelve feet long, are long stalked, the stalk thickly covered with long light brown glossy scales. The fronds are of a pleasing, light green color, glaucous underneath.

Cibotium regale is another big-growing species from Mexico, resembling much the preceding in form. The stalks are slightly hairy and it is slow to make trunks.

Alsophila australis from Australia is much seen in cultivation. It is a good cold-house fern which grows to quite big proportions. The rough scaly stalks, and leathery texture of the frond distinguish it easily from the others.

Alsophila excelsa from Norfolk Island is one of the hardiest and biggest-growing, cold-house tree ferns in cultivation. In appearance it looks like *A. australis*, but bigger and quicker growing. Seedlings grow soon to useful size.

Alsophila Rebeccæ from Queensland is a comparatively small species. From a smooth trunk the numerous fronds grow two to three feet long, are of a glossy dark green color and of heavy texture; the stalks are nearly black.

Alsophila primata from Jamaica is, like the preceding, a small tree fern with very finely divided fronds of a light green color, glaucous underneath. The stalks are covered with woolly scales at the base. The trunk of this fern, which does not grow more than three to four feet in height, branches out sometimes.

Hemitelia Smithii (*Cyathea Smithii*) from New Zealand is a big-growing species. The fronds are very finely divided. The crown and stalks are covered with long hairy scales.

Lomaria and *Blechnum* are also represented among the tree ferns. We referred to them in a previous article.

Am. D. H. A.

Two Valuable Asparagus Species

ASPARAGUS COMORENSIS

This variety resembles *plumosus* but is of a lighter green and grows faster. Christian Eisele of Philadelphia says it will make three strings for one of the *plumosa*. There are seeds of this variety in commerce but we hear some complaint as to the vitality of same. For the present it will be safest to depend on plants for stock.

ASPARAGUS DECUMBENS SCANDENS

This variety was given to us as *decumbens scandens* but we suspect the *decumbens* to be redundant as the specimen fits the description of *scandens* exactly which is entirely different from *decumbens*. *Asparagus scandens* is a very desirable subject for hanging baskets and elegant for training over a trellis. Grows about three feet, with much-branched, wavy dark green fronds. A very charming variety, the dark green of the fronds together with their graceful formation making it particularly desirable.

G. Watson

British Horticulture

THE WINTER BLOOMING CARNATION SHOW

The cult of the winter-blooming carnation has made great strides in Britain, and the leading American introductions are now familiar to the public. There are several market florists who make a specialty of this branch. On the initiative of Mr. Hayward Mathias arrangements were made for a special show of carnations to be given on February 13th in connection with the fortnightly exhibition of the Royal Horticultural Society. In order to meet the arrangements of the society it was necessary to fix the show in February, but this date was found too late by many of the growers to show their blooms to advantage. Several of the leading specialists, however, made a brilliant display. Two Guernsey growers had a splendid lot of the leading varieties, attesting to the high cultural skill which has been reached in this branch of floriculture in the Channel Islands. The Guernsey growers have the advantage of a longer amount of sunshine than is obtained by their English colleagues. As regards the general display, there were very few novelties to be seen. One of the most attractive was a new bloom, Mrs. A. Burnett, raised by H. Burnett, of Guernsey, an improvement on *Enchantress*, and this received an award of merit from the Royal Horticultural Society.

A NEW SOCIETY FORMED

During the show a meeting of the trade was held for the purpose of considering the advisability of forming a winter-flowering carnation society. There is a National Carnation Society in existence, but their efforts are confined to looking after the summer show. Mr. P. Smith advocated the formation of a society on the lines of the one in America. The Society would be able, he argued, to perform useful work in registering new varieties, and in certificating them after being adjudicated by a body of experts. The society would also be able to arrange an annual show each year, about the month of December, and this would be a very suitable time for the trade. It was the unanimous opinion of the meeting that a society on the lines suggested should be formed. Mr. Brunton was elected chairman and Mr. Hayward Mathias, honorable secretary. A committee was appointed comprising Messrs. S. Mortimer, Boyes, and Cadman, who were instructed to arrange a meeting to be held in London during the Temple show in May at which arrangements will be made for holding the winter show, drafting the schedule, etc., provided the trade take the matter up with enthusiasm. The society should fill a useful place amongst the special societies in existence. As regards effective cohesion florists on this side have a lot to learn from their American colleagues.

W. H. Adsett.

London, Feb. 14, '06.

Forcing Tomatoes

Tomatoes are forced for winter, spring and early summer crops, commanding good prices, and giving fair and often excellent returns. In the West winter-forcing has not been found as advantageous as the spring, but in the East both crops give first rate returns.

For a winter crop the seed is sown during the early part of August if the product is wanted the middle of December; it taking about four months to bring the plants into bearing. In like manner, for a spring crop in April, the seed is planted December 1. After the plants begin to bear they keep it up for two or three months.

The management of both crops is the same. Care must be exercised in heating, watering, and ventilating. While not a very difficult crop to raise it is rather sensitive to careless handling. The aim should be to keep up a steady growth but not fast enough to cause the formation of soft, succulent tissue.

Any house that is light and tight, with sufficient head room, and a heating apparatus that will keep up the required temperature will grow tomatoes. The darker the house the wider should be the distance of planting.

The seed is sown in flats of rich, sandy loam and when the seedlings show true leaves they are transferred to 2 1-2-inch pots from which they are repotted into 4s. The transplanting must be done on time in every case so the seedlings and young plants will not become root-bound. Short, stocky, vigorous plants are desired, something root-bound plants never become, being instead elongated, yellow, and spindling. They are transplanted from the larger size into the beds when the fruit buds form which should be in about ten weeks from the time of seed sowing. Often the stock for the winter crop is grown from cuttings taken from field plants in August and rooted in sand.

Raised benches, solid beds, boxes and pots are all used for receptacles, advocates of the different kinds claiming successful results in each case. Considering the nature of the plant, raised benches six to eight inches deep, built directly over the heating pipes are to be preferred. It is possible, however, to get good crops in boxes twelve to eighteen inches square with a depth of eight inches, or in twelve-inch pots.

The tomato is not particularly susceptible to variations in the kind of soil. A mixture of equal parts of old pasture sod, loam, and horse or cow manure will furnish the necessary elements to carry the plants to the time they set their fruit. Then an addition of one-quarter ground nitrate of soda, one pound of acid phosphate, and one-half pound of muriate of potash per 100 square feet of bed given once in two weeks, will supply all the food necessary if the soil appears to be running out. Or weekly applications of liquid manure is excellent. Many growers differ from this; they advocate the growing of a crop with no manure other than that contained in the soil. However, the tomato is a gross feeder and if the soil is at all deficient in any way fertilizers should be applied.

The tomato requires a high temperature, the range lying between 60-65 degrees at night and 85 degrees during the day, although on continued warm clear days it can go much higher without harm. The air should be kept moist until the fruit begins to set, when the house is run dryer to facilitate the production of pollen. Thorough ventilation without drafts should be given.

Care must be exercised in watering to thoroughly saturate all layers of soil; often the top layer will be soaking wet while the bottom of the bed will be dust dry. Sub-irrigation is the ideal method; this will reduce the blossom end rot, keep the soil porous, and permit of complete saturation. Ordinarily 2-in. drain pipe placed end to end six inches apart in the bottom of the bed will do very well. One end of each line is left projecting and turned up at an angle so it can be filled with water, which, escaping through the joints, will rise by capillary attraction thoroughly moistening the whole bed without packing it down.

It is necessary to train and prune tomato plants. They are usually trained to one or two stems, the kind depending on the variety, the distance of planting, and whether they are grown with a companion crop. If set one foot apart each way they are trained to a single stalk and no companion crop is grown. But when the distance is two feet the two-stem system can be used, and a quickly maturing crop such as lettuce, radishes, or beans can be taken off before the tomatoes require all the space. If the tomatoes are the main crop it is better to plant close and train to a single stem for the yield is greater and comes earlier.

Pruning consists in removing all secondary shoots and suckers on the stems and in pinching the top when the desired height is reached, i. e., six feet. Often three or four leaves are taken off the base of the plant to hasten fruiting.

When the flowers open hand-fertilization is necessary to procure a uniform crop. Choose clear days for this work and have the air dry. Gently shake the pollen off into a spoon and when a visible quantity is collected go carefully over each flower and dip the stigmas into it, at the same time tap off the pollen to replenish the stock. As the amount of fruit set depends to a large extent on the thoroughness with which the fertilizing is done, plants should be gone over every day or at least once in two days. Extra pollen can be kept over from day to day. All the pistils must be fertilized to insure round, uniform, regular fruit.

The yield will vary with the season. The winter crop will average about one pound per square foot of bed, while the spring crop will be double that. From four to eight pounds per plant are obtained.

The varieties best suited for forcing are the early kinds making a moderate growth, of a uniform solid texture and regular shape, such as Lorillard, Long Keeper, Beauty and Stone.

Tomatoes are best shipped wrapped in tissue paper, packed in five pound boxes, stems down, one-half or one dozen boxes to a crate.

Here in the East the crop is especially remunerative, bringing from 50 to 20 cents a pound according to the season. There are but few places where a sufficiently high price cannot be obtained to make tomatoes a paying crop.

R. S. Adams.

Haemanthus

HEMANTHUS MIRABILIS

Haemanthus diadema, is a fine salmon-red umbel, with a diameter of nearly 9 inches, with very ample foliage, forming a plant of a very elegant aspect. *Haemanthus Fascinator*, has splendid heavy foliage, and a beautiful bright red umbel. *Haemanthus mirabilis* carries a dense umbel of a fine orange red, and is still in full bloom with me, and attracting widespread notice, being such an uncommon flower at this season, as the above photograph will show. They were first introduced from the Belgian Congo States and introduced to the trade by Lucien Linden of Ghent. These charming plants, admirable in their elegance and luxuriance of flowers, grow under the constant shade of the great equatorial forest, in small groups of four or five, in very light soil, composed of sand and vegetable debris. The temperature in these regions ranges from 15 degrees to 20 degrees C. and a refreshing coolness reigns which offers a contrast to the heat of the open land. Thus it is certain that these plants would do well in a temperate house, that shade is necessary to them, and that they should be grown in a very light soil. During the dry season the plants are at rest, hence after blooming they should be encouraged to rest by giving them a diminished supply of water.

J. F. Meas.

Chrysanthemums for Exhibition

It is now time for those who grow chrysanthemums for exhibition to be getting their cuttings put in the propagating bench. While we can get good flowers from some varieties propagated in April or May the first of March is none too early for most varieties, especially such varieties as *Merza* that are of a dwarf, slow-growing habit. Plants started into growth now will make a stocky short-jointed growth which is much preferable to that made by plants started in hot weather and will well repay the little extra care, in the quality of their bloom when the flowering season comes.

As to varieties to grow, this must be left to the grower himself as nearly every one has his own fancy and should know the varieties that will do best with him. There are so many sterling varieties on the market now of an almost equal shade of color and size that it is pretty hard to decide which is which. I append a list of 35 varieties the past record of which puts them in the front rank as exhibition flowers.

Yellow: Cheltoni, Col. Appleton, Mrs. William Duckham, F. S. Vallis, Mrs. E. Thirkell, Mrs. William Knox. The first four for long stems and the last two for the short vase class. The last-named is a new one being introduced this season and will be sure to make good in a collection. It is of the Carnot type and a fine free grower.

White: *Merza*, Guy Hamilton, Mrs. D. V. West, Ben Wells, Timothy Eaton, Nellie Pockett.

Pink: William Duckham, F. O. Cobbold, Leila Filkins, Mrs. Geo. Mileham, W. A. Etherington, F. Richardson.

Red: Mrs. Henry Partridge, John Shrimpton, Lord Hopeton, S. T. Wright, Maynel, Harry Barnes, H. J. Jones. The first named is being introduced this season and in my opinion is one of the finest ever put on the market; a good free grower with fine stem and foliage and does not burn as most reds do. Those in need of a good red should get Mrs. H. Partridge.

Other colors: John Fraser, Ethel Fitzroy, Mrs. J. A. Miller, Mrs. Thos. Lee, Mrs. Carrington, Mrs. Chas. Longley, Donald McLeod, W. R. Church, Mrs. Geo. Haume and Mrs. John E. Dunne. The last two are new, both of them good, easy doers. Mrs. Geo. Haume is a salmon buff. Mrs. John E. Dunne in color is very distinct; might be called old rose. This is certainly an acquisition for the exhibition tables.

Pot plants that are intended for exhibition should by this time be getting established in 5-inch pots. Do not let them get pot bound; keep shifting them right along as fast as they will need it from one size to another until they get into their flowering size. If they get pot bound at this stage they will surely send up flowering shoots and that means very much smaller plants than they would have been if the conditions had been different. Pinch regularly; as soon as the tip of the shoot can be caught between the forefinger and thumb is the time to do it, not when the shoot gets four or five inches long when shoot has become woody and hard and takes a much longer time to make a new break.

WM. J. STEWART, Editor and Manager.

Our rose number next week

The next issue of this paper will be a notable one in honor of the approaching meeting and exhibition of the American Rose Society at Boston. Rose topics will lead and there will be many fine illustrations besides a splendid colored supplement, depicting the beautiful new H. T. rose, J. B. Clark. Don't fail to get a copy.

Our frontispiece

Our frontispiece shows a beautiful view in Grenada for which we are indebted to Robert Cameron of Harvard Botanical Garden. It serves as an appropriate accompaniment for the excellent contribution on tree ferns which appears in this number, from the pen of that eminent fern authority, Amedee Hans. The scene of the picture is in the mountains 1800 feet above sea level.

Humbugs abroad

We read some amusing stories of wonder-workers in foreign lands which show that we have no monopoly of the humbugs. The Frenchman who has turned a radish into a potato is now in the lime light and that student of psychology—also a Frenchman—whose plants droop when he feels melancholy and respond with animation when he is happy, is still going the rounds of the magazines and daily papers.

Florists' working hours

An uneasy feeling prevails among the florists in English cities concerning the prosecution of several of their number for infringement of the provisions of the Factory Act, so-called, and a disposition is manifested to resist the placing of their business under the operation of this act. In this country the florist has not had much interference, thus far, with the generally accepted hours of labor, which, it must be admitted, are at some seasons very long and at all times very irregular. Such is the nature of the business, however, and so transitory are the goods handled, that

an arbitrary restriction of the hours of employment would seem impracticable. Perhaps one reason why florists' employees are so resigned to the demands made upon them is their fondness for their work. As a rule, however, employers here are reciprocally appreciative and, very properly, grant considerable freedom of time when conditions permit.

The Dayton outlook

The executive board of the Society of American Florists and Ornamental Horticulturists has been holding its regular spring session at Dayton this week. The convention in the attractive little Ohio city next August should afford a timely opportunity for the introduction of unique features and no doubt the executive board under its hustling young president will have taken full advantage of the situation. It is generally conceded that in the smaller cities where the society has convened the absence of outside allurements has contributed not a little towards that condition of unanimity and concrete enthusiasm which counts for so much when the final summing up comes and the record made of the work that has been done. We look for substantial and far-reaching results from the Dayton convention and hope to see the cause of American horticulture greatly advanced through the well-directed efforts of the S. A. F. throughout the year.

American carna- tions winning rec- ognition in England

It is very gratifying to read of the rapid advancement of the American carnation in the estimation of growers and the public in England. Until quite recently the prejudice there against the class of carnations popular in this country, on account of their fringed petals and other characteristics, was deep-seated. Now a special society devoted to the interests of this "winter-flowering" section, as it is designated over there, has been formed and has the promise of enthusiastic support. At the recent show of the Royal Horticultural Society in London, American varieties were conspicuous, high awards being won by collections containing Lawson, White Lawson, Enchantress, Victory, Nelson Fisher, The President, Lady Bountiful and many others in our list of favorites. As our British brethren never stand still in matters horticultural it is reasonable to expect something from them before long in the way of advancement. One English journal, commenting on the present movement, expresses the view that further breeding for size is not advisable but that increased fragrance should now be sought. We heartily coincide on the point of fragrance, and believe that it should be given greater prominence in our judging scales for carnations and also for roses.

The price of HORTICULTURE is but one dollar a year. Every page is edited to be helpful to its readers. Every inch of advertising represents a live business concern.

Watch Your Opportunity

TRANSPLANTING NOTES.

Although many men profess to understand transplanting, yet few have results that substantiate the claim. Many seem to believe that a short period of digging gives them this knowledge. Every season the results from such experience (?) is seen, and generally the blame is placed on the poor nurseryman. In considering the essentials in successful transplanting, thought must first be given to the stock itself. Why will so many allow price to be the only factor in deciding where they will purchase? A plant is quite different from any ordinary purchase, because if unsatisfactory, it means not only the loss in money, but time.

When plants are ordered, the ground in which they are to go should be prepared, if weather permits. Give them large holes, and if the soil is heavy and of a clay composition, dig a foot deeper than customary and fill in with broken stone or ashes for drainage. Good soil should be used in filling in on the roots, using, if necessary, about 15 or 20 per cent. manure, with the ordinary top soil.

When trees arrive plant at once, or heel them in temporarily. If received in frozen condition, they should be placed in a dark cellar where the temperature is a few degrees above freezing, and allowed to thaw out gradually. Care should in all cases be exercised to see that roots are not exposed to sun or wind.

A word regarding pruning will not be amiss. A nurseryman seldom, if ever, prunes unless told to do so. In digging, a certain percentage of roots is destroyed, and a corresponding amount of wood should be taken from the top. If the transplanting occurs early in the spring, severe pruning is not necessary for soft wooded trees, such as willows or poplars. Harder wooded ones, such as oak and beech, should be given a little more pruning, as they do not make many fibrous roots, and therefore stand a time before making marked progress.

When the transplanting is attempted after the plants have started to leaf, they should be severely pruned, and if a drought occurs the ground should be kept moist. In planting, see that the soil is worked in among the root fibres. It is a mistake to pour water in, as there are sure to be air spaces after the water drains away. It is better to plant without water, packing the soil well in and then soak the ground, and after the soil has settled, fill to the level of the ground and give a mulch of manure.

WARREN J. CHANDLER.

PERSONAL.

Charles Guelph, of Rice & Co., was a visitor in Cleveland last week.

Charles Beck, chief gardener at the National Soldiers' Home, Dayton, Ohio, for past thirty years, suffered a stroke of paralysis, March 1st, and is not expected to live. He is seventy-nine years of age.

WHAT THEY SAY OF US.

Inclosed please find postal money order for subscription to HORTICULTURE for 1906. Am well pleased with it. Every number is improving.—S. J.

OBITUARY.

Michael O'Donnell, one of the well-known market gardeners of Revere, Mass., died on March 2 at his home, aged 78 years. He was a member of the Boston Market Gardeners' Association. He is survived by three sons.

William T. Pierce, for ten years chief engineer for the Metropolitan Park Commission, who resigned about a year ago, on account of ill health, died February 26, at his home in Waverlytown, Mass. He was 41 years old. He leaves a widow and a daughter.

Jesse Beebe, 25, an employee of the Miami Floral Company, at Dayton, was struck by an engine and instantly killed at the railroad crossing on Monday, March 5th, while carrying flowers to the banquet hall where the executive committee of the S. A. F. were to be entertained.

Peter Patterson, for nineteen years in charge of R. A. Grannis's country seat at Morris Plains, N. J., died on February 16. He was a native of Scotland, a man of ability and held in the highest esteem by his brother gardeners. He was 76 years old. He lost his wife six months ago. A sister and brother survive him.

Frederick W. Ritter, a leading florist of Dayton, Ohio, since 1832, died on March 1st, in the ninety-third year of his age. He had been in the greenhouse business since he was 13 years of age, and worked in the establishment of his son, Herman H. Ritter, at Dayton, up to within two weeks of his death. His death was caused by a fall downstairs.

PENNISSETUM MACROPHYLLUM
ATROPURPUREUM.

Translated from "Moeller's D. G. Ztg.," by G. B.

The Pennisetum m. atrpp. is one of the best introductions in recent years. It is an ornamental grass of a very impressive effect, produced by the deep-brown coloring of its long, elegantly carried foliage as well as by the silver-rose color of its flowers, making a very charming contrast, and being comparable to a colored fountain.

The plant is a perennial to be kept in winter in most any place in a cool house; the new shoots start in spring with very little heat and when placed outdoors in a rich-soiled sunny location will grow very rapidly into an elegant decorative plant.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WHOLESOME CHESTNUTS.

Get early cabbage and cauliflower plants into frames to be hardened before planting time.

When not absolutely necessary, fire heat ought to be dispensed with in the day time, utilizing the sun heat to the fullest extent in preference.

With one good watering shortly after heat is turned on, the grapery border will not require much more until growth has progressed considerably.

Don't place anything in a cold frame immediately after potting if you want growth to proceed without interruption, better wait until they are somewhat established.

If grape vines have been tied down to break, they ought to be untied and fastened permanently to the vines before the shoots attain the length of being easily broken in handling the vines.

Do not let cucumbers in full bearing in shallow benches suffer for want of water; top dress the bed with soil and some fertilizer, remove all deformed fruit and avoid heavy cropping which soon cripples the plants.

Continue propagating by seed sowing and cuttings, if you have room. Don't let last year's number be your limit; then, when the time comes, if you need them you'll have them, but if you don't save them, and need them, it would have been better if you had them.

To help the setting of fruit on peach and nectarine trees, shake the branches at the time of day when the sun is brightest. Attend early to the dis-budding of peaches and nectarines. An hour devoted to this work in time is better than a long, wearisome day when it is too late.

FORCING THE VARIEGATED MA-
PLE (ACER NEGUNDO VARIE-
GATUM) FOR WINTER
DECORATIONS.

Translation from a German Trade Paper.

Choose well-branched plants, either standards, pyramids, or bush form. Use smallest possible pots; after potting, lay plants outdoors flat on their sides on the ground, cover branches with leaves to protect against very severe frosts. After slight freezing take plants into the house—say in November to December—give plenty light, start with 60 degrees and gradually increase to 90 to 95 degrees Fahrenheit. During all this time water the plants freely and syringe the wood liberally. Four to five weeks of such treatment should produce the foliage and plants ready for decorating. For forcing, the wood should of course not be pruned. This same treatment holds good for the Japanese maples; treated thus, they will be in foliage easily within five weeks.

James B. Kidd is connected with the Hinode Florist Co., New York, and not with the Yokohama Nursery Co., as stated in our last issue.

If you want to do business with rose growers or rose dealers, advertise in our Rose Number next week. Send copy at once.

NEWS OF THE CLUBS AND SOCIETIES.

AMERICAN ROSE SOCIETY.

Members of the American Rose Society are hereby reminded of the approaching meeting of the society and the annual exhibition which is to be held at that time in connection with the spring exhibition of the Massachusetts Horticultural Society.

Intending exhibitors will please communicate with the secretary, who will forward, upon request, schedule for the exhibition and entry cards as called for.

Entries must be made in all cases under the schedule number in accordance with the rules of the society.

It is earnestly hoped that members will make an effort to be present and to do their part in making this meeting a notable one.

The exhibition will open at noon on Friday, March 23, continuing until Sunday night.

The annual meeting of the society will open at 7.30 p. m. on Friday, March 23.

The transaction of business will be in the following order: Calling to order; Reading minutes of previous session; Reports of standing committees; Reports of special committees; Miscellaneous business; Essays—Discussions; Election of officers; Appointment of committees; Adjournment.

Under the order of essays and discussions, addresses will be made as follows:

"Recent Advances in the Practice of Rose Growing for Cut Flowers," by J. J. Curran, Elmira, N. Y.

"The Retailer's Part in the Introduction of New Roses," by George Asmus, Chicago, Ill.

"The Mail Order Trade," by P. J. Lynch, West Grove, Pa.

"The Deterioration of Forcing Roses: Its Causes and Effect." A discussion, to be opened by A. Farenwald, Roslyn, Pa.

Question—Should the Rose Society issue Certificates to New American Roses?

On Saturday evening, March 24, a banquet will be tendered to the American Rose Society visitors by the Allied Horticultural Interests of Boston, under the auspices of the Gardeners' and Florists' Club of Boston, at the Hotel Brunswick.

The officers of the society are: President, Alexander Montgomery, Natick, Mass.; vice-president, Robert Simpson, Clifton, N. J.; treasurer, Harry O. May, Summit, N. J.; secretary, Wm. J. Stewart, 11 Hamilton Place, Boston, Mass.

Executive Committee—M. H. Walsh, Woods Hole, Mass.; A. Farenwald, Roslyn, Pa.; H. A. Siebrecht, New Rochelle, N. Y.; Peter Crowe, Utica, N. Y.; W. N. Craig, North Easton, Mass.; John Burton, Chestnut Hill, Pa.; P. Welch, Boston, Mass.

Judges for Exhibition of 1906—J. F. Huss, Hartford, Conn.; S. S. Pennock, Philadelphia, Pa.; J. J. Curran, Elmira, N. Y.

PHILADELPHIA FLORISTS' CLUB.

The monthly meeting of the Florists' Club of Philadelphia was largely attended, the main attraction being an address on "Railroad Gardening" by Paul Huebner of the Reading system. Another magnet was a promise of some new rose exhibits but Kate Moulton was the only visitor. This variety was staged in very good condition considering that it had been on the road four days. It is a silvery pink with deeper center, large size and good form, and looks in its color and make-up somewhere between Testout and La France. The stem and foliage are very good and altogether it appealed to the experts present as a most promising variety. This club does not give awards of any kind else this new comer would have been duly decorated as it deserves. P. Joseph Lynch of the Dingee & Conard Co., was most enthusiastic in praising the work of such men who can give us American varieties of this merit so far superior to much that we get from Europe. A general discussion on the merits of other roses took place. Adolph Farenwald, Stephen Mortensen, Robert Craig, Edwin Lonsdale, Chas. Mehan and others took part. Antoine Wintzer of West Grove gave some illuminating remarks supplementary to what Mr. Huebner had to say about the best varieties of cannas. Altogether this meeting was one of the most instructive and interesting ever held by the club. Ladies' night was announced for Thursday, March 22nd. The special feature of the April meeting will be an address on Easter plants by Robert Craig. Carnation Glendale was exhibited by Messrs. Vesey of Fort Wayne. Jno. E. Haines sent his new scarlet carnation and also a number of promising seedlings.

CLEVELAND FLORISTS' CLUB.

The carnation exhibit of this club was in every way successful, inasmuch as the flowers were the finest yet shown. The committee, Adam Graham, Ed. George and M. J. Meyer, reported on the stock in very favorable terms. Wm. Brinker showed a vase of 25 each of Fred. Burki, Lady Bountiful, Flamingo and Enchantress, sent by Fred. Burki of Pittsburgh, that were exceptionally fine; Merkle & Son, Mentor, O., a vase of the finest colored Lawson there, also some very good Enchantress; Bate Bros., a vase each of Cardinal, one of their own seedlings, White and Red Lawson and Enchantress; John Blechschmidt, Lawson and Enchantress; Asher Coe exhibited some Albertina; Roman Wasco and H. Carlton, violets Prince of Wales and Gov. Herrick. Mr. Carlton was complimented on the good keeping qualities of his Gov. Herrick. John Kelly, a vase of Princess Narcissus; G. M. Nauman, a vase of very large cyclamen. The finest blooms were undoubtedly those of the Ohio Floral Co., Enchantress, Flamingo and Lawson carnations, with stems at least 30 inches long and flowers 4 to 5 inches across, also two vases of Bridemaids and Golden Gates, conceded to be the finest flowers yet shown.

A DAYTON SYMPOSIUM.

The executive board of the S. A. F., meeting in Dayton this week, was entertained on Monday evening at an elaborate banquet, the hosts being Vice-President Altick and a number of the local florists and supply people. The banquet table was resplendent with flowers contributed by Dayton florists and the E. G. Hill Company, and tastefully arranged by Mr. Shaeffer. The menu cards were green and gold, cut in the form of the rose leaf badge of the S. A. F., and very pretty.

Vice-President Altick presided. He expressed the hope that this meeting of the committee might be the prelude to the most successful convention in the society's history, successful for the society and beneficial to the community where it was meeting. He spoke of the favorable prospects for an outdoor exhibition in connection with the convention and referred to other existing conditions in Dayton that would contribute to making the convention unique in many ways. President Kastling was the first guest called upon. He made a witty, jovial speech, complimenting Dayton on its fine streets and prosperous business aspect, and predicting a widespread interest on behalf of the coming convention. Ex-President J. C. Vaughan spoke in complimentary terms of Dayton's example and influence in the home-adornment movement and the opportunity to make the program fit the possibilities of these surroundings, which the society should grasp, and urged that the organization should draw away from questions of mere merchandizing and take stand on higher ground.

Secretary Wm. J. Stewart followed with complimentary allusion to the hospitality extended the visitors and the many avenues open for co-operation between the local people and the society officers to achieve an unprecedented success this year on broader lines than ever before. E. V. Hallock spoke of Dayton as a grand example of the enterprising modern town and urged that every florist in the section should enroll himself as a member of the S. A. F. If small, he would grow; if young, he would learn something, and if old, the society might learn something from him. W. H. Elliott gave a brief account of a recent visit to Havana and the primitive florists' cultural methods in vogue there, but submitted that sometimes the best lessons are learned from unexpected sources, and instanced a marvellous phenomenon in rose-growing he had seen in the old Spanish city.

E. G. Hill prescribed "Opportunity, ability, and faith," as a good motto for the S. A. F., and said that if the florists of America will only wake up to their opportunity there is a heritage within their reach, for the civic improvement sentiment is spreading like a prairie fire, and there is a growing demand for ornamental shrubs and herbaceous stock in vast quantities, and the cut-flower men are called upon to wake up and do their share in the onward movement. P. J. Hauswirth and F. H. Traendly next contributed some characteristic Hauswirthisms and Traendlyisms with pleasing effect. George Asmus gave a

very practical talk, agreeing with Mr. Hill as to the outlook and the florists' duty. Although prominently identified with the sporting element, he felt that nine-tenths of every florist's career must be hard work, and urged that all should "get busy" on the new lines now offering. E. G. Gillett spoke for Cincinnati and said many nice things about Dayton, all of them true, and promised a great treat for all who should visit the convention next summer.

Among the local speakers were S. Karpf, secretary of the National Bowling Association; George Shaw and Mr. Newman, of the Dayton Paper Novelty Company; Mr. Storrs, of the Dayton Fruit Tree Label Co.; Mr. Lutz, of Aul Bros.; Mr. Bartholomew and Mr. Shaeffer, all of whom expressed the most cordial, hospitable sentiments. Mr. Karpf made a most inspiring speech, promising that although under democratic administration Dayton would take the lid off for the S. A. F. next August.

NEWPORT HORTICULTURAL SOCIETY.

The regular meeting of the society was held last Tuesday evening, President Alexander MacLellan in the chair.

The president submitted his report as a delegate to a meeting of the Rhode Island Society for Rural Progress. The president of the College of Agriculture, Mr. Butterfield, is very enthusiastic in the movement, and is confident that a great deal can be accomplished by the society, composed, as it is, of prominent men from all parts of the State. There are prospects of the Newport Horticultural Society's grant from the State being considerably augmented this year, which, if they materialize, will enable the society to considerably extend its work.

After the meeting adjourned a group of members were heard in discussion over matters relating to the late carnation exhibition at Boston. The sentiment was voiced that it was a splendidly representative show.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the society was held March 3, President S. Carlquist in the chair. This was carnation night, but owing to such incessant wet weather all day, there were not many flowers on exhibition. W. J. & M. S. Vesey, Fort Wayne, Ind., sent, at the suggestion of Mr. A. F. Boddington, some of their new carnation Glendale, which unfortunately arrived very badly bruised and shaken up. They were accorded a vote of thanks. Among the exhibits were some very fine White Lawson, Nelson Fisher, Flamingo and Enchantress. A letter was read from W. J. Stewart, secretary of the American Rose Society, cordially inviting all the members to attend their annual exhibition in Boston, March 23, 24. A special meeting was held March 5, to pass upon the new rose, Miss Kate Moulton, from Minneapolis Floral Co., Minneapolis, Minn. It was awarded a first-class certificate. The next meeting, March 17, will be rose night.

GEORGE FOULSHAM, Secretary.

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting was held on Tuesday evening, February 27. President Mooney in the chair. The W. K. Wilkes prize, a set of flower vases, was won by Mr. Langle of White Plains, with a bunch of the Farquhar violet; he also showed a promising new variety, a sport from the above. Other exhibits were Alma Ward, Robert Craig, and an unnamed pink by C. W. Ward; F. R. Pierson Co., a vase of Winsor; David MacFarlane, a new variety of tomatoes, some of the fruit stock having ten to twelve ripe tomatoes on them. A discussion on the questions left over from the January meeting followed.

FLORISTS' CLUB OF WASHINGTON.

At the meeting of the Florists' Club of Washington, March 6, Peter Bisset, who has been secretary for two years, was elected president. Mr. Bisset was

PETER BISSET

born in Auchtermuchty, Fifeshire, Scotland, on April 24, 1869, and in early boyhood was inspired with a love for the profession in which he has made such creditable advancement. He came to this country in 1889, and for the past fourteen years has had charge of Twin Oaks, the beautiful home of Hon. Gardiner G. Hubbard.

PITTSBURG AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

It was rose night at the meeting, March 6, and the display was so large and of such fine quality that the members were eager to hurry through the routine business and discuss the rose. The Minneapolis Floral Co. exhibited a large vase of Miss Kate Moulton. It is a far cry from Minneapolis to Pittsburgh, but this young lady made the long journey in good shape. Good stem, good foliage and the slightly different shade of pink at the ends of the curved petals give it a very pleasing effect in artificial light. W. H. Elliott

of Brighton, Mass., sent six plants each, grafted, of Wellesley and Killarney in pots. It was much regretted that cut blooms of Wellesley were not shown, as this rose while popular in the East, has not been shown as grown in Pittsburgh. W. A. Manda of South Orange, N. J., sent a box of cut blooms of the Cherokee rose—a new rose to many here and very attractive; Jno. L. Wyland, De Haven, Pa., a vase each of Bridesmaid, Bride, Richmond and Mme. Abel Chatenay, the Richmond and Chatenay attracting special attention. The Richmond was grafted stock. H. L. Blind & Bros., West View, Pa., showed Richmond on own roots; a vase of Killarney, Bridesmaid and Bride, grafted stock; blooms of American Beauty; and Baby Rambler and Crimson Rambler in pots. The Pittsburgh Rose and Carnation Co., Gibsonia, Pa., showed vases of Perles, Mme. Cusin, very free blooming; Bon Silene, handled only in the bud; Killarney, Bridesmaid, Bride, Chatenay and Richmond. The Florists' Exchange of Pittsburgh—vases of Bridesmaids, Ivory, Chatenay and very fine Queen of Edgely; David Fraser, gardener with H. C. Frick, fine Killarney; S. J. Hatch of Pittsburgh, carnations; G. & J. W. Ludwig of Allegheny, Gen. McArthur rose and carnations in variety. Neil McCallum, in his paper on "Outdoor Roses," spoke enthusiastically of roses as he had seen them growing out of doors in Australia. The subject for the April meeting will be "Eastern Plants and Flowers."

H. P. JOSLIN.

NEW JERSEY FLORICULTURAL SOCIETY.

Trentham, so recently given by the Duke of Sutherland to the English people for purposes of higher education, was presented pictorially and descriptively to the society by George Austin on the evening of March 2 at their regular monthly meeting. The speaker, who had a personal acquaintance with the place of more than twenty years, described its situation upon the Trent river, its enormous extent, being five times the size of Central Park, New York, the planting of its beds, management, accommodation of its gardeners, their pay and condition, and answered the many questions upon the maintenance of perpetual flowering in its parterres, its three miles of glass-covered walks, and fruit all grown out of season, with none grown higher than a man might reach to pick.

The monthly floral display maintained its usual excellence and was representative of its best growers. There were orchids from Lager & Hurrell, Julius Roehrs Company and Thomas Jones, a display from the houses of William Barr, grown by A. W. Bodwell, which filled an entire table, the Nicotiana Sanderae rising above the group of dendrobiums, cattleyas and cypripediums and lycastis; carnations from the Colgate, Runkle and Hathaway estates; roses from Col. Potter; antirrhinum, stocks and carnations from A. C. Van Gaasbeek, grown by William Bennett, a specimen Adiantum cuneatum, from J. Crosby Brown, grown by Peter Duff. The judges were Edward Rochers, George von Qualen and A. L. Caparn.

RAILROAD GARDENING

(Remarks by Paul Huebner, Superintendent of Gardens and Grounds of the Reading Railroad System, at the monthly meeting of the Florists' Club of Philadelphia, March 6, 1906.)

AT READING RAILROAD STATION, PA.

I have been requested by your committee to say something about the subject of railroad gardening. I had the pleasure of appearing before you on the same subject a number of years ago, and while I do not know that I can tell you anything further now, I can at least refresh your memories on some of the salient features of this particular phase of horticulture.

The most important point in railroad gardening to my mind is how to achieve effectiveness at a minimum of cost. Around this fundamental idea all our thoughts and efforts concentrate and from this radiates all that we do and all that we leave undone. A railroad company does not beautify its station grounds for philanthropic reasons. The basic idea is to increase traffic, and to do this, surroundings are made as attractive as possible. Another point we have aimed at is hedging for the purpose of preventing snow-drifts, as well as for ornament. For this purpose we have found nothing to beat the California privet. We have heard some complaint as to the hardness of this

plant, but our experience has been very fortunate. We have lost but few even in the bad years that killed off so many in this latitude. The Osage orange we have discarded entirely. It is subject to scale and the robber roots run all over the adjoining field. Besides that, it is very hard to trim unless when it is in the soft state. California privet is very easily trimmed.

During the years that have elapsed since I talked to you before the most decided change that has taken place in methods is the increased use of hardy herbaceous plants and evergreens. The evergreen is not only showy in summer, but is soothing and picturesque in winter and gives that pleasing touch to the landscape which we all so much appreciate. All the thuja and retinosporas are good, but I do not recommend the arbor vitae on account of the bag worm. For embankments we find the Scotch broom a very satisfactory shrub. We do not use the Wichuriana rose much for embankments, as it costs too much to prepare the soil. For shrubbery groups the weigelia, forsythia, labur-

AT TRENTON JUNCTION, N. J.

num, Prunus Pissardi, and amygdalus are excellent. Of course we have to depend on the old fashioned carpet beds to brighten things up with color around the stations. Our best scarlet geranium is Denison's seedling, and we also use a good many of John Doyle, which is the same color. S. A. Nutt is too dark for railroad purposes, and it does not clean itself enough. La Pilot is about as dark as we can use effectively, but this variety is running out somewhat, and we need one with a better constitution. In pinks we pin our faith to Glorieaux. La Favorite is one of the best whites I have tried.

In cannas, we still believe in Fuerst Bismark. It is an elegant bright scarlet with green foliage, a fine grower and blooms all the time. It also cleans itself nicely and always looks fresh and bright. Madame Berat is a good pink and is grand all by itself in a big bed. We like Buttercup better than Florence Vaughan for a yellow. Of the giant orchid-flowering cannas, we like Kate Grey the best. For a large bed twenty or thirty feet in diameter, this is hard to beat. Bouvier, Egandale, and Madame Crozy are still

The Fumigating Kind Tobacco Powder is without doubt THE ALL of the things now on the market for killing Green Fly; it's good stuff or we would not use it.

H. HEEPE, Akron, Ohio.

Why not ask for a free five pound trial sample. It's convincing, it only costs you the express charge. It's no new fangled thing, hundreds write of it like Mr. H. Heepe. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOOHOFF COMPANY, 119 West Street, New York City, N. Y.

among our stand-bys. For a good, all-round dark foliaged variety, Egandale is still in the race. One of our most effective pieces of bedding last season was composed of cannas, and Souvenir d'Bonn Abutilon with Coleus Verschaffelti. Another was composed of Admiral Avellan canna, scarlet sage and, next the grass, Coleus Verschaffelti. This had a fine effect—flowers red, foliage red, the whole thing red—wonderfully striking indeed. We use Eulalia quite freely for oriental effects; but the arundo and pennisetum is not hardy enough for us. The dwarf-growing begonias, such as Vernon and other semperfluous varieties, are very useful and keep in bloom all summer long. They look best with an edging of Madame Salleri geranium. A combination of Abutilon Savitzi and acalypha makes a beautiful contrast. We still use the Golden Bedder coleus. It is hard to beat as a good all-round yellow. Nero and Verschaffelti are also good. We use peonies freely, mixed in with the shrubbery. Hardy phloxes are now much in vogue, and we are finding them most valuable. For back grounds the hardy sunflowers are grand, and there is now a fine variety of these to choose from. Anemones, tulips, crocus, and other things that cannot be seen in winter we leave alone, as railroad workers have no respect for anything they can't see. Everything goes right under when they get at it with pick and shovel.

From what I hear, Philadelphians are quite proud of the ornamental character of the Reading Railroad stations in their vicinity. It gives them something to point to with satisfaction

when strangers are around, besides being pleasant to look at for themselves. Personally, it would not be in good taste for me to talk about that, but I may be pardoned for saying that in my recent travels through the south, I saw nothing in the same line that I wanted to take my hat off to. I did see a few wonderful things, however. One of them was the croton

PAUL HUEBNER.

hedges in Florida. Imagine a hedge of this brilliant foliage plant eight or ten feet high and splendidly developed. This was a revelation to me and really a grand sight. The hibiscus, single and double, was in bloom during my visit and was simply covered with thousands of blooms. These latter were especially fine in the English col-

ony in Nassau. But as a rule, the southern country looked to me poor and miserable. A trip to Atlantic City is a treat in comparison. When you come to a hotel it is O. K., but outside of that you might as well go to sleep.

NEWS NOTES.

The Flynn greenhouses, so long a landmark at the lower end of Essex St., Lawrence, Mass., have been torn down to make room for a new brick block.

The formal opening of the establishment of the Chicago Rose Company, 56 and 58 Wabash avenue, Chicago, took place on Thursday, March 8, and invitations were sent out to the trade to visit them from 8 a. m. to 7 p. m.

H. D. Hemenway, director of the School of Horticulture, Hartford, Conn., has sent his resignation to the board of trustees, to take effect April 1. It is said that Stanley H. Rood, who is supervisor of manual training in the high school, will succeed him.

The death of Robert Cocking, a wealthy florist of Danbury, Conn., brings to light an unlooked for disposition of his estate. Some seven years ago, his nephew, Hedley H. Tomlinson, arranged with him to take care of him and run the business, in consideration for the property. Now there appears a will made three years ago which leaves the property to Mr. Tomlinson's sisters in England.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

SEED TRADE TOPICS.

Reports from Cleveland indicate that the seed business is opening up well there and gives promise of good trade this spring.

Peter S. Dooner, 10th and Chestnut streets, well known and popular among the seedsmen and florists of the country as the most unique and genial Boniface in America, has been seriously ill since the 26th inst.

J. D. Eisele, of Dreer's, is under the weather. We extend our sympathy and best wishes for a speedy recovery. One can't go to Europe without having a fine arrearage of work to catch up with on return. And burning midnight oil sometimes has had consequences.

The leaden atmosphere of Broad Street Station, Phila., was brightened on Monday by some of the bright lights of the American Seed Trade Association on their way to Washington. The party was joined in that city by Walter P. Stokes, William Henry Maule and W. Atlee Burpee. Bringing up the rear was that redoubtable reformer, Patrick O'Mara of New York. It is understood that the particular dragon requiring attention at present is Freeseeditis, and the seedsmen did well to provide themselves with such a formidable rear guard as "Nervy Patrick," as his Philadelphia admirers have been calling him lately.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Wm. Schray & Sons, St. Louis, Mo., submit for registration *Canna Superior*: height, 3-4 feet; foliage, green; flowers, cherry red with light gold band.

Alternanthera aurea robusta, a sport from *aurea nana*; much stronger grower than the type, the leaves being 1-2 inch wider, more highly colored, and retaining color better than the type.

A. C. Zvolanek, Bound Brook, N. J., submits for registration winter-flowering sweet peas *Secretary William J. Stewart* (*Christmas Captain* x *Comtess Spencer*), color, light blue; *Mrs. W. W. Smalley* (*Enchantress* x *Mrs. E. Wild*), color, satin pink.

W. J. STEWART, Sec.

ELBERON (N. J.) HORTICULTURAL SOCIETY.

A meeting of the Elberon Horticultural Society was held on March 5, at which there was a large attendance. One was admitted to active membership. The subject for discussion was "Rose Culture Under Glass," and a very interesting and instructive paper was read by Mr. Henry Wood.

W. H. WAITE, Sec.

CLUB AND SOCIETY NOTES.

At the last meeting of the Gardeners' Club of Baltimore there was a large attendance. A. A. Fielder exhibited a bunch of *Lady Bountiful* car-

nations. D. T. Connor, representing Lord & Burnham Co., was present.

About 125 members of the Boston Market Gardeners' Association visited the farm of W. W. Rawson at Arlington, on Saturday afternoon, March 3. After an inspection of the place a collation was served and brief speeches were made by Prof. F. W. Rane, H. C. Hall and the genial host, on the various aspects of market gardening.

The meeting of the Horticultural Society of New York, on March 14th, will be held in the rooms of the American Institute, 19-21 West 44th street. The subject for the evening is *Useful and Economic Plants*. The general discussion will be opened by Mr. G. V. Nash, and will be illustrated by lantern slides and a collection of living plants.

A joint meeting of the Chicago Wholesale and Retail Florists' Associations was held at Handel hall on the afternoon of March 6, with an attendance of twenty-two. Mr. Bentley, of Bentley-Coatsworth Co., being duly elected temporary chairman, made a few pointed remarks, after which the meeting was thrown open for full debate. A lively discussion followed, participated in by the majority present, the question before them being the so-called "red violet." It was finally decided that the wholesalers would call a meeting and make some concessions to the retailers. A motion made by W. J. Smyth, seconded by C. A. Samuelson, to thank the wholesalers for their kindness was carried. The meeting adjourned at 6 p. m.

Advertisements for *Rose Number* should reach us by March 12.

PHILADELPHIA NOTES.

Julius Wolff has purchased the business of Mrs. Mahlon B. Young on Ridge avenue, and has installed his son there.

William H. Ferguson, of 12th and Spring Garden streets, is laid up with a broken leg, caused by a fall on the icy pavement of Ridge avenue on the 24th ult.

William Tricker, of water lily fame, has severed his connection with the Percival Roberts place and is at present on the waiting list. His long and varied experience in gardening, both commercial and private, insure his re-engagement soon. Good men of Mr. Tricker's stamp are scarce.

The glass men are laying low at present. It's the other fellow that's doing the chasing now. From all accounts a waiting game is justified, and the florist has to dangle the long green pretty temptingly to buy at present.

Jno. Lees, Bridge street, Frankford, is to make an addition to his greenhouses, commencing about April 1.

Joseph P. Schembs, of 629 North 15th street, has given up the branch store at 15th and Chestnut streets. Reason stated being trouble with the landlord. It was a paying stand, being right on the route of traffic to the P. R. R. station at Broad street.

A viewing party, consisting of W. Kleinheinz, John Kuhn, Fred Ehret, Ralph Schrigley, Rupert Kienle and George Falconer, visited the Strafford Carnation Farms of Edward A. Stroud on the 6th inst. They were much interested in the place and loud in their praises of the fine condition of the stock.

Grafted on Dickson

One of the most careful and experienced rose grafters in this vicinity has commissioned me to dispose of the following small surplus of young grafted roses:

	per 100	per 1000
3000 Maids	\$12.00	\$120.00
3000 Brides	12.00	120.00

Every plant guaranteed perfect and grafted on the genuine Dickson Manetti. I was after some of this party's stock last year but could not get a look in.

DON'T NEGLECT THIS OPPORTUNITY

If you are after \$90 kind this offer will not interest you. This is genuine Dickson and grafted by a master workman.

Also 4000 fine plants of

Chatenay

Own root; grown by John Burton and ready for delivery from now on; \$5.00 per 100; \$45.00 per 1000. These are better than Western stock and worth a great deal more. Chatenay is rapidly growing in favor as a profitable Summer Rose.

G. C. WATSON
1614 Ludlow St., Phila.

CRAFTED Bride and Maid

For March and April Delivery

This stock is grafted on Manetti purchased from Thos. Smith & Sons, Stranraer, Scotland. What is being sold is the same as we are using ourselves. I am not in any \$120 Trust, nor have I to hide behind anyone to sell the plants on commission. I pay commission to no one and therefore can sell at

\$10 per 100
\$90 per 1,000 | 2½ in. Pots
500 Own Root Carnots,
\$3.50 per 100

R. T. MCGORUM
NATICK, MASS.

Kaiserin Roses

Very fine grafted Kaiserin rose plants for immediate delivery, out of 2½ inch pots, ready to shift. Write for prices.

CROMWELL, CONN.

ORNAMENTAL SCHOOL GROUNDS

Their Influence on the Pupil and Benefit to the Florist Trade.

The following is an abstract from a paper read before the Iowa State Horticultural Society by G. A. Heyne last summer. We have held it until the present time, in recognition of the many valuable suggestions it contains—valuable and timely now as spring is approaching, when they may be put in operation. Anything that can be done to interest the young generation in horticultural matters means just so much more business for the florist, nurseryman and seedsman:

The subject of ornamental school grounds is a very important one to the florist, when looked at from a business standpoint; but to start right it also must be instructive to the pupils. Every florist ought to take, at least, enough interest in the planting of school grounds to see that a good start is made; try and get teachers and janitor interested. The school grounds as usually found in most cities and towns will require some interest on the part of principal and teachers, and above all, it is very helpful to have the assistance of a janitor whose heart is in the work, one who takes pleasure in doing the work because he delights in things beautiful, and not because he is required to do it. Get the boys interested; let them help in grading the ground, trimming the trees and in the general cleaning, which is usually the first work required in the spring. Have a plan made for the season's work; go over the ground with the teachers, exchange ideas with them and give them encouragement, state what plants you can furnish them, plat the beds after a plan has been decided upon, lay out the walks (at this point the trees should be considered and planted as early as possible, if the work is done in spring, as it should be). Then sow grass seed, and plenty of it, as soon as tree planting is finished, and remember, the earlier you sow the stronger your grass will be by fall. You should also plan to have a few shrubs, and be sure to have a border for flowers. Sow annuals and perennials at the earliest time so as to have them well established before hot weather. If you can have some extra

flower beds place these so as to be visible from the schoolroom if possible, and be sure to use bright and cheerful colors. Let the little gardeners sow and take care of the border.

If there are trees growing on the ground that produce shade, try a rockery or fernery. I want to briefly describe one that was built by the janitor and myself on the grounds of the Audubon School, the one I attended as a boy 35 years ago. It started with the janitor having trouble to make the grass grow in a shady place, so he secured a few loads of weather-beaten stones and was about to build a fernery when I happened to pass and hinted that it would be a pity to hide the beautiful stones in piles of leaf mold, so we planned together to use them to some advantage, and after making a hurried survey of the quantity of stones, we decided to build a basin and waterfall, or rockery and fountain. With the approval of the board of education, who were kind enough to allow a small sum needed for sand and cement, we constructed this on the surface, so had no excavation to make. We placed a layer of concrete four inches thick in an oval form, then built up with the heaviest stones a wall about the edge, following with smaller stones upward, building at each end an extension to a height of four feet. On the one at the east end of the basin we constructed a series of ledges for waterfall to a height of eight feet. While doing this we arranged a small water pipe running nearly to the top; also placing a large pipe for overflow a little below top of basin, which was built up inside with concrete from the bottom about four inches thick, tapering at the top to two inches in thickness. The depth of the basin, inside, was twenty-two inches. The west end extension is of roundish form, about three feet in diameter, and was filled with good soil and planted with different plants and vines.

The basin is filled with rich soil to a depth of five inches and kept full of water. As the water is used for flushing there is consequently no waste. There were several water lilies, sagittarias, cabtails and other aquatic

Grafted Roses

All our grafted Roses are from flowering wood grafted on Dickson's Irish disbudded Manetti stocks, and are now in exceptionally fine shape.

Killarney, \$15 per 100; \$150 per 1,000. Bride, Bridesmaid, Kaiserin, \$12 per 100; \$120 per 1,000. To prevent disappointment order now as stock is limited. Own Root Richmond Roses, \$12 per 100. Killarney, \$10 per 100.

ROBERT SCOTT & SON, Sharon Hill, Del. Co., Pa.

PANSIES

Over one million plants ready from our Famous Strain. None better. \$1.50 per 500. \$2.50 per 1000.
Daisies (Bellis) fine plants, \$2.00 per 1000.
Forget-me-not, Hardy blue, \$3.00 per 1000.
Geraniums out of 2 1-2 inch pots, best varieties, \$1.50 per 100. 50,000 ready now.

J. C. SCHMIDT CO., - BRISTOL, PA.

CYCLAMEN SEEDLINGS

ONCE TRANSPLANTED.

Giant Strain; none better; including Salmonium, New fringed, Roccoco and Papilio in five separate Colors.

\$2.50 per 100, \$22.00 per 1000.

plants in the basin. The ledges on the waterfall were covered with water cress and other plants. All the outside crevices of the basin and both extensions, or rockeries, also the waterfall, were planted with different plants and vines, ferns and masses, according to position. There is also a bed running nearly around outside the basin of different soils in which a variety of plants will be used for experiment each season.

That all this had a great influence on the children will not be questioned. Suffice it to say that in teaching nature study and geography it was a great help. The children took great delight, when tired of play, in looking at the various plants and flowers that grow in the water, on the rocks and in the soil. They enjoyed seeing the fish swim back and forth in the pond and watch them catch the insects that happened to alight on the surface of the water. They learned something of the relation of water, rock, soil, light and shade to each other and the various vines, shrubs and flowers.

Another good result is that the pupils learn to appreciate the beautiful; they will assist in keeping everything in good order. The influence of having beautiful flowers, vines and shrubs is carried into the homes and will assist in promoting civic pride. The individual who takes pride in his school and school grounds will take pride in having a beautiful home and neighborhood, and the love of country is inseparably connected with a love of home. Whatever, therefore, leads a boy to assemble the comforts and elegancies of life around his habitation tends to increase local attachment and render domestic life more delightful, thus not only augmenting his own enjoyment, but strengthening his patriotism and making him a better citizen.

Now let us look up the benefit to the florist for taking an interest and part in the planting of school grounds. If you love and admire a nice home garden and propose letting others enjoy the same with you, you have only to start out planting one and you will be rewarded with a brisk demand for all things that show better than they have been seen before. Set out a few interesting plants and you will find the school children know you have some more for sale and, by the way, they will want some flowers during the long winter months and, of course, they go to the man that helps plant the school grounds. The teachers are a class of customers that should be given a chance for your surplus flowers where drawing is taught; they will return the favor when Christmas or Easter is at hand.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

CUT FLOWER MARKET REPORTS.

Since the Lenten season **BOSTON** set in it is a case of history repeating itself, as far as the flower market is concerned. The weather conditions have been exceptionally favorable, however, keeping the demand well within the supply. Roses have been fully up to the standard, the new crop of Beauties and Edgely showing up remarkably well. Violets as well as bulbous stock are very plentiful, and the quality remains good. Carnations also held fairly well, and the demand is exceptionally good.

A sharp expansion in receipts occasioned by mild weather marked the cut flower trade the past week. **ASH** Wednesday put its extinguisher on social gaiety and prices on all lines were at a decline. They had been holding wonderfully well particularly for Beauties, teas, carnations, etc. Brides, Bridesmaid and Richmond were very fine and gilt edge stock brought high figures. Killarney and Chateau also of good quality, brought good prices. A good supply of carnations was had the previous week, the select stock moving fairly well while ordinary seemed to block up considerably. On Saturday an over-supply was had; the abundance of rain from early morn to closing time caused a good quantity to be carried over together with tulips, daffodils and other bulbous stock. The latter could be had at one-third of last week's prices. The mantle of Lenten dullness has spread itself over this market to an extent, and were it not for the fact that floral work was in evidence, it would puzzle some to find a place for the surplus.

The gentle calm which came over the local trade this week is an evidence that the Lenten season is gradually asserting itself; but the shipping orders came to the rescue and helped to balance the business. Carnations are plentiful, as is also bulbous stock. Rose stock continues scarce. A few good short Beauties made their appearance and were picked up very quickly. The violet supply is good and they sell well. Sweet peas came in with good color and were in demand for funeral work. Ferns, leucothoe, galax, smilax and asparagus are plentiful and have a very good color. Popular prices prevail, except among roses, where fancy stock runs a little higher.

The market is active and firm, stock in demand and supply equal to it; prices about the same

as last week. All flowers show improvement in color and quality and many potted plants are beginning to make their appearance.

DETROIT Business was not so flush the past week, this being about the first retard since the holidays. Easter is not so very far off, and with its large quantity of business will live things up again. Although we hope for many good days before Easter, we must look for slow ones while Lent prevails. At the commission houses stock is coming in more plentifully and reductions are generally looked for. Carnations and sweet peas are abundant, and there need be no worry about their shortage for a time at least. Hyacinths are used in large numbers. In honor of the new postmaster taking his seat, many fine roses were sold, among them Beauties, Bridesmaids and La Detroit.

LOUISVILLE Business conditions last week were unusually good. The supply of carnations and roses of good quality was equal to the demand. Violets and lily of the valley were there with the goods and were readily disposed of. Forget-me-nots, mignonette, jonquils, hyacinths and other seasonable stock were in good supply and the quality was generally satisfactory.

NEW YORK The past week has shown a marked falling off in the volume of business, with receding prices on stock of all kinds, with the exception of the best grades of American Beauties, which are still in limited supply. The quality of roses in general is good, and while the cut is not heavy, the lessening demand makes them appear plentiful. Carnations do not move readily even at the lower prices which now prevail. Bulbous stock of all kind is cheap. Violets have been in the black books for the past ten days, and when sold in thousand lots bring small figures. Asparagus, smilax and adiantum about even up with the demand. The market is fully supplied with lilies, lilac, freesias and sweet peas.

PHILADELPHIA Ash Wednesday had an appreciable effect on last week's market. From that date on, the tone was dull and draggy, and stocks accumulated fast. There was more stock displayed on the streets on Saturday than at any time this season. Beauties are still scarce. Brides and Bridesmaids good and plentiful, with demand best on the lower grades. Carnations are too plentiful, but of fine quality. Violets are moving well, but prices low. Lily of the valley a little off as to quality. Lent certainly has its effect, but people will be forgetting about it long before the 40 days are up. The store men are using the lull to look around among the growers and spot the best Easter stock.

CALIFORNIA NOTES.

The prevailing weather during the past week was warm and cloudy, with frequent showers in all sections. Peaches, apricots, plums and other varieties of deciduous fruits, and strawberries, are in bloom, and the outlook is good for average crops. The hills and valleys are thickly covered with new growth, and green feed is plentiful, and California's wealth of cattle are in fair condition and improving.

On the evening of the 27th of February the Pacific Coast Horticultural Society gave San Franciscans an exceptionally fine entertainment and dance in the Mission Opera House. The object was to raise funds for defraying the expenses of the floral exhibits which the society gives from time to time. The decoration committee, consisting of growers H. Plath, Frank Pelicano and Charles Abraham, were given a vote of thanks for placing the stock, contributed by the prominent growers, in beautiful array. Great crowds of people attended with their dollar tickets.

BUSINESS CHANGES.

HEATING! HEATING! HEATING!

200,000 SQUARE FEET OF GLASS IN 1905.

PRETTY FAIR, NOT CONNECTED WITH ANY COMBINATION OR TRUST.

READ THE FOLLOWING FROM MR. J. D. COCKROFT,
NORTHPORT, LONG ISLAND, N. Y.

MR. WM. LUTTON,

DEAR SIR:—I wish to express my entire satisfaction of the heating plant that you installed, in my three (3) carnation houses, 33 x 175, we have not the slightest difficulty in maintaining the temperature, and I am particularly pleased with the boiler.

Yours very truly,

J. D. COCKROFT.

SOME PRIVATE WORK ALSO.

MR. WM. H. LUTTON,

DEAR SIR:—I am very well pleased with the heating of our palm house, your work has been done in a satisfactory and workmanlike manner, true to the letter of your contract, which means first-class work, you have the liberty to use my name and can refer anyone to me, and I shall give you the credit that you are justly entitled to.

Yours Respectfully,

JOHN SHORE, Supt. Wm. H. Macy Estate, Harrison, N. Y.

Original copies of the above letters with many others on file at my office and will be furnished on application.

WILL FURNISH YOU SEPARATE ESTIMATES ON YOUR HEATING AND BUILDING.

WILLIAM H. LUTTON, West Side Ave. Station, C. R.R. of N. J., Jersey City, N. J.

WANTS.

Position Wanted

The undersigned is open to engage with lady or gentleman requiring the services of a thoroughly experienced and competent gardener capable of taking charge of a first-class private place. European and American experience in commercial gardening, public parks and nurseries, and would consider propositions in that connection. Best of references as to character and ability. Address:

William Tricker, 585 Pine St., Camden, N. J.

SITUATION WANTED—By an all-around greenhouse man, middle age, American, Protestant, strictly temperate, trustworthy, honest, willing to work. A good home more desirable than high wages. Address P. O. Box 232, Fitchburg, Mass.

WANTED—A first-class Fern Grower, one who has had experience. Good wages, steady position. Send references. R. H. N., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—To lease or buy, a place with 15,000 or 20,000 ft. of glass, in good location, vicinity of Boston, suitable for raising roses and carnations. R. D., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—For a large private place, a first-class man as inside Foreman. Must have European experience in some of the best places. Apply, with copies of testimonials, to H. W., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—By April 1st for our new house, young man with fair knowledge of rose growing. Good opportunities for the right man. Give references and state wages required in first letter to Montrose Greenhouses, Montrose, Mass.

WANTED—First-class man to take charge of a city flower store in fashionable district. One capable of making fine table decorations and waiting on critical customers. Salary \$20 per week to right man. T. W., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Manager in a plant-shipping department of a large commercial establishment. None need apply unless experienced in overseeing men, handling palms, bedding plants, etc. Married man preferred. State wages wanted. Also a position for an assistant. L. Company, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED BY APRIL 1ST—A FOREMAN on a large commercial place. A position is offered to an honest, sober, intelligent man. One who is familiar with Greenhouse and Outside plants, who is able to handle men to good advantage. To such a man is offered a permanent position with good salary. Give full particulars in first letter. Address Plants, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Man to take care of conservatory; one who has knowledge of spring planting and knows how to do trimming. Address Spring, care HORTICULTURE, 11 Hamilton Place, Boston.

THE PERFECTION OF GREENHOUSE BUILDING.

The announcement in our advertising columns of the establishment of a company for the erection of greenhouses and conservatories under the "U-Bar" patents will, no doubt, find many interested readers.

For utility and beauty this construction is unquestionably the highest attainment in greenhouse and conservatory building. The Messrs. Pierson and de Forest begin business with a splendid factory equipment, with a wide field of operators and with the personal confidence and esteem of the gardening profession.

A high art catalogue is in course of preparation and every reader of HORTICULTURE should make early application for a copy.

GREENHOUSES BUILDING AND PROJECTED.

Bridgeport, Pa.—August Swartz, one house.

Reissue 12,459. Fruit Grader. William C. Anderson, San Jose, Cal., assignor, by mesne assignments, to Anderson-Barngrover Mfg. Co., San Jose, Cal., a Corporation of California.

Carman's Antipest

INSECTICIDE AND FUNGICIDE

For the Garden, Orchard and Greenhouse. Nonpoisonous and harmless to vegetation.

Kills Green Fly, Aphides, Bark Lice, Thrip, Mealy Bug, Red Spider, Scale, Wire Worms, Ants and Slugs.

This is the Grower's Friend, handy to use, cheap and effective, mixes readily in water. Destroys all insect pests and keeps down mildew. \$1.50 per gallon. Also in quarts, half gallons and in bulk. Send for circulars.

PERFECTION CHEMICAL CO.,
Flushing, N. Y.

If you want to do business with rose growers or rose dealers, advertise in our Rose Number next week. Send copy at once.

FOR SALE.

Greenhouse and vegetable business, carried on for ten years. About 5000 feet of glass, two new houses, two old; new dwelling house and barn; 30 acres of land. Walter Slade, Box 394, Franklin, Mass.

FOR SALE—Two greenhouses, 23x95, 23x65, with hot water heating apparatus moved stocked with Carnations and Violets. Will sell as it is with dwelling house attached and 17,000 feet of land, or take cash down and removed. Address: 709 South St., Waban, Mass.

ANNOUNCEMENT

BY
HITCHINGS & CO.

WE are pleased to inform our friends and patrons that we have resumed business under our old and well-known firm name of Hitchings & Co., with sales offices at 1170 Broadway, N. Y. City. General offices and Works at West Side Ave., Jersey City. Foundries and Boiler Shops at Garfield Ave. and Union Street, Jersey City, N. J.

The Officers of the Company are E. W. Hitchings, President; Charles Armitage, Secretary and Treasurer; William Sefton, Sup't of Works.

In addition to Hitchings & Co.'s former manufacturing plant, we have acquired the Pierson-Sefton Co.'s new factories, and their entire working force, consequently we are in a position to largely increase our production.

We trust our friends will favor us with the same liberal patronage and confidence we have enjoyed for so many years.

USEFUL BOOKS.

Our Greenhouses--and More Foot Piece Talk

After you have set the wooden posts for your greenhouse, and lined them up carefully, some are bound to be a bit higher or lower than the others. That's a bad proposition to overcome, and if you don't overcome it, there's a wind — where there's a wind there's bound to be an uneven pressure and a continual breaking of the glass not to mention the impossibility of heat tight joints. The cast iron foot piece has an adjustment that takes up all these variations and brings your side supports exact and even. If it's a case of supporting a ridge and furrow gutter, we have a round socket top on the foot piece to take the pipe support, giving this same adjustment strong point.

Select List of Hybrid Perpetual and other ROSES

FOR OUTDOOR PLANTING

We make a specialty of preparing Roses for outdoor planting, our stock is all field grown, either American or imported from England or Ireland. The plants (unless otherwise specified), have all during the winter months been potted up into 5 or 6 inch pots according to the growth of the variety, they have been stored in cold houses where they will break away naturally making it the best possible stock for you to sell to your retail customers.

ROSES SPECIAL OFFER for Immediate Acceptance

As will be seen by the following list we have a very complete collection of Roses. Those enumerated we can supply in hundred and thousand lots; we have several hundred other varieties we can supply in quantities less than hundred lots. They are all two year old field grown and the handsomest plants we have had the pleasure of offering to the flower-loving public.

We have upwards of 150,000 in our storehouses awaiting shipment. The kinds consist of the choicest we have been able to import from all parts of the world, in addition to the thousands growing in our Nurseries, which created quite a sensation the past summer.

Offer is made subject to stock being unsold.

HYBRID PERPETUAL VARIETIES.

\$1.25 per doz.; \$10 per 100; \$90 per 1000.

Manetti Rose Stocks

Imported to order from the best English and French growers, prices by correspondence; we have the permission of W. E. Holmes to publish the following extract of his letter, dated

Montrose, Mass. February 1st, 1906.

GENTLEMEN:

"I am very pleased to inform you that the 15,000 English Manetti obtained from you are the best we ever handled, both for uniform grade and vigor. It is no trouble to make them grow; out of the first 5,000 in the grafting case, we have not lost over three p. c. We shall increase our order for this fall—"

HYBRID ROSES, low budded or tree shape, standards and half standards, prime English and German Stock, true to name, in rich assortment of the best sorts only; send for list and order timely to secure Fall delivery. We are

HORTICULTURAL IMPORTERS and DEALERS and procure to order any article in the Plant and Bulb Line, for greenhouse or outdoor planting; we sell to the trade only and solicit your orders. Address

Some Cook Roses

COOK SEEDLING, NO. 226.

COOK SEEDLING, NO. 266.

Our frontispiece shows the new rose *Madonna*, one of the best of John Cook's productions. We recently described a visit to the "Mecca" of American rose hybridists, viz., E. G. Hill's at Richmond, Ind. If Mr. Hill's place may be called the Mecca then may Mr. Cook's be aptly termed the "cradle" of American rose hybridizing. *Madonna* is a superb white rose with creamy centre, full double, opening perfect and deliciously fragrant; the foliage is rich and thorns few. No. 226 figured herewith, is of *Bonsilene* color, with silvery lining. It is a rampant grower and the flowers are very large. No. 266, also illustrated in this issue, is a *Jacqueminot* crimson of great promise. Like the two others above described it is the result of crossing and recrossing Mr. Cook's own seedlings for three generations. Every shoot, he tells us, produces a flower

on a stiff, erect stem. Another of Mr. Cook's named varieties is *Cardinal*, a fine large crimson scarlet. No. 367 is evidently a tea in all except fragrance, which is that of a garden hybrid. Its color is similar to that of the pink pond lily, and there are seven leaflets on each leaf. No. 357 is very dark, approaching the shade of *Prince Camille de Rohan*. The petals are wavy edged, slightly incurving and rather short. The fragrance is equal to that of *American Beauty*. No. 310 is *Brunner* tint on the outside petals shading to deep crimson in the heart. It shows tea lineage in foliage and stem and the fragrance is well mingled between hybrid perpetual and tea.

There are many other seedlings coming on at the noted Baltimore establishment from among which we may expect to see some promising additions to the list of American forcing roses.

New Roses

The years 1904 and 1905 have produced some excellent new roses. It may be of interest briefly to review some of the most noteworthy varieties exhibited in this country during that time. One of the finest of all is the new Hybrid Tea rose, *J. B. Clark*, which is faithfully shown in the accompanying supplement. This rose was sent out by Hugh Dickson, Belfast, Ireland.

At the show of the National Rose Society held in London in July last, something of a sensation was caused by a magnificent bloom of rose *J. B. Clark* in the stand of flowers shown by Hugh Dickson. The

flower was 5 inches deep and 7 1/2 inches in diameter, probably the largest bloom of a Hybrid Tea ever shown. It worthily obtained the silver medal as the best flower of a Hybrid Tea Rose in the show. The coloring is rich deep scarlet, shaded with blackish crimson. It has been alluded to as "the grand Liberty." One of its parents is said to have been the old Hybrid Perpetual Rose *Lord Bacon*; sent out by William Paul & Son, Waltham Cross, some years ago. This is a good red variety that blooms well in the autumn when most of the Hybrid Perpetual roses are over. Rose *J. B. Clark*

obtained the gold medal of the National Rose Society (the highest possible award) at the autumn exhibition in 1904.

On the same occasion the gold medal was awarded to a new rose called Irish Harmony. This is a lovely single rose, a creamy white flower; the foliage is bronze-colored and associates with the large creamy-white flowers very effectively. Shown by Alex. Dickson and Sons, Ltd., Newtownards, Ireland.

Hugh Dickson is another grand new rose, a Hybrid Perpetual; it has also obtained the gold medal of the National Rose Society. Sent out by Hugh Dickson, Belfast. It is a flower of large size and exquisite form, of deep crimson, scarlet-coloring. It also has the merit of being delightfully fragrant; one cannot unfortunately say this of all the new roses. In July, 1905, only two new roses obtained highest honors and both were shown by Alex. Dickson and Sons, Newtownards, Ireland. One of them was Betty, a large tea rose of somewhat loose form, very vigorous, blush tinged with buff-color in the centre and with rose outside. It is fragrant, and on account of its bold appearance and soft coloring will doubtless soon become a favorite. The other gold medal rose is Mrs. Myles-Kennedy, a large and attractive flower (Hybrid Tea) of good form, of pale blush coloring tinged with a deeper shade in the centre. This rose is also sweetly scented. On this occasion an award of merit was given to a new rambler rose called Mrs. F. W. Flight, exhibited by Cutbush & Son, Highgate, London. The flowers which are so freely produced as to be closely packed on the shoots, are very bright rose, fading to light pink with age.

Three new roses received recognition at the autumn show of the National Rose Society in September last. Two received the gold medal, namely, Irish Elegance and Countess of Gosford.

Irish Elegance is a very beautiful single rose; the large flowers are soft salmon pink and the buds and flowers are richly tinted with red and apricot. This lovely garden rose was shown by Alex. Dickson & Sons.

Countess of Gosford is a handsome seedling Hybrid Tea rose, of good form, the petals being elegantly waved.

The color is deep salmon pink. Shown by S. McGreedy & Son, Portadown, Ireland. A card of commendation, an award inferior to the gold medal was given to rose Dorothy Page Roberts. This is a beautiful Hybrid Tea, a large flower with reflexing petals; color rich rose pink, which fades to a lighter shade as the blooms age. Alex. Dickson and Sons.

Among new rambler roses the favorite was the new Lady Gay, so finely shown, growing in pots by William Paul & Son at the Temple Show. The large free pillar plants were masses of the lovely rich pink flowers and attracted much attention. It will no doubt soon become a feature of English gardens, for with the pergola now commonly seen in many gardens, rambling and climbing roses have become very popular.

Harry H. Thomas

British Horticulture

NOTED ROSARIANS.

Among the leading exhibitors of roses the names of Messrs. G. and W. H. Burch occupy a prominent position. Their list of awards totals 896, including several medals from the National Rose Society. At their nursery at Peterborough they have 16 houses devoted to rose culture. The great majority are grown in pots, including 10,000 Niphetos. Questioned as to the methods of culture adopted, the head of the firm recently stated: "Our chief aim is to produce a good, bold flower instead of a flimsy, flabby one, and we rather pride ourselves that our roses are easy to distinguish by the stiff petals. One reason for that is that they are not driven, but only moderately forced. The importance of moderate forcing cannot well be exaggerated. For instance, by keeping our roses at a moderate temperature only they last in bloom for six months instead of for two or three." The cutting of bloom commences in earnest in January, and when this is in full swing from 6000 to 7000 are cut in a week. Among the newer varieties being cultivated are Lady Gay, Hiawatha, Wedding Bells, Debutante, Minnehaha, Sweetheart, Carissima, J. S. Fay and J. B. Clark, the last named being a companion rose to the popular Frau Karl Druschki.

THE OUTDOOR SECTION.

Many acres are devoted to the standards, dwarfs and climbers. Thousands of standards are cultivated from which the best exhibition blooms are obtained, a great point being made in keeping the stems perfectly clean. There is a large stock of dormant buds, the great majority of which are on the seedling brier. Mr. Burch is a strong advocate of this method, because of the lasting quality of the flower produced and the longer life of the tree. The wood is much harder than that of roses grown on other stocks, whilst they more effectively resist the frost. Asked as to the changes in the system of modern planting, Mr. Burch replied: "This has changed very much even during the last ten years. For example, in the formation of roseries, the modern custom is to plant beds of individual varieties. We have just supplied a very fine rosery of 18 beds, each containing 24 trees of one variety. This not only gives a very pleasing effect, but it is also exceedingly useful in these days of economizing time for table decorations, where only one color is used. The idea may be carried out in various designs, with arches and pergolas introduced to break up the monotony. A recent novel design in a garden not far from here is a centre bed of Caroline Testout to represent a table, and 13 beds of various colors to represent 13 chairs."

COVENT GARDEN MARKET EXTENSIONS.

The steady increase in the flower trade has necessitated another extension to Covent Garden Market. Sometime ago a new block of buildings was added to accommodate the foreign section. Now the home trade is to receive additional space. A substantial new building is now in course of erection on the site previously occupied by some ancient property. This will be about 75 feet by 95 feet, and will give additional space for 90 stands. There are many of the existing tenants who are desirous of obtaining more room, whilst it will also be possible to admit several florists who have hitherto been left out in the cold owing to the want of space.

At the present time the market is well supplied with cut bloom. Heavy consignments of daffodils are coming to hand from Guernsey and the Scilly Islands. Increased attention is being paid to carnation culture, and there is now a tendency to overdo this branch. The blooms have never been so plentiful as at the present time. The most popular lines include Enchantress, Mrs. T. W. Lawson and Governor Roosevelt. The first named has been making the top price, averaging from 4s. to 5s. a dozen blooms, whilst the others make from 3s. to 4s. a dozen. Florists report that the American tree carnation is steadily growing in favor, the meritorious displays made at the Royal Horticultural Society shows having done a great deal to popularize the bloom.

Some Interesting Results in Rose Hybridization

Hybridizers are working industriously to get a race of hardy roses. *Rosa rugosa* seems to be a favorite to work upon and we are promised a fine set of this crossing from that tireless hybridizer, Dr. Muller, of Germany. He also has some of the Persian Yellow type which will be, however, sent out by the firm of J. Gravereaux-L'Hay, in France. Now, why not try the *Rosa multiflora* and, instead of using it as a seed bearer, use it as the pollen bearer. Some six years ago I crossed the Caserta with the pollen of the multiflora and I got three seedlings out of it which proved extra strong growers, more like the Caserta than the multiflora, and perfectly hardy. The flowers were pure white, fully four times as large as the multiflora, blooming in clusters of three and four flowers. I have no doubt, if this rose had been recrossed with one of the hardiest hybrid tea roses, some good results might have come out of it. I was not working then in the direction of hardy roses. I grew them a few years, and then as the bushes became too large I grubbed them out, for which I am sorry now.

Our native *Rosa setigera* is one which I think would produce better results than *Rosa rugosa*. It may be objected that this is a climbing rose; well, I've had climbers from dwarfs, why wouldn't it be possible to get dwarfs from climbers? I have two seedlings now, a cross between Billard et Barre and Marechal Niel, both climbers. One of the seedlings is all growth and no flowers; the other grows about five inches and then makes a bud. It took twenty flowers of the Marechal Niel to produce enough pollen to fertilize one flower. I also fertilized Billard et Barre with Persian Yellow. The seedlings had the same habit as the Persian Yellow; the lower leaves would always ripen up and drop. In trying to keep them growing through the winter they became sick and died. They should have been kept dormant through the winter. I could cite many other instances of climbers producing dwarfs. It will very likely take a good many years in crossing and recrossing, besides patience and perseverance to get something nearer to what we are seeking.

John Cook

Damping off of Seedlings

This disastrous disease to young seedlings is common enough to every gardener, and that it is caused by a parasitic fungus, has been known for many years. This fungus is botanically called *pythium*, and the most common species is *baryanum*. The hypha of the fungus makes its way into the tiny stem of the seedling, by way of the stomata, or by boring its way through the delicate cuticle.

Some botanists affirm that the tips of the hypha secrete a ferment which dissolves the cell wall of the plant it comes in contact with, and so enables it to enter; while other ferments bring the organic substances of the host into a condition in which the parasite can assimilate them. It usually enters the plant just at the surface of the ground. After it once gets in it goes on growing and branching through the whole system of the plant. The stem of the young seedling soon tumbles over because the tissues become so much damaged and decayed that the tiny stem has not the strength to stand upright. Once the plants fall they soon rot entirely away. The only cure for this disease is to change the atmospheric conditions at once and also to keep the seed bed drier. Where damping off is in evidence, at some time or other there has been a too close atmosphere and too much moisture.

Pythium, although a fungus is closely allied to the algæ, and requires moisture for its normal reproductive process to go on. If a check is not given to the fungus by a change of conditions, it will very soon destroy all the seedlings in the seed box. The best way to save any seedlings out of an infested box is to transplant all that are unaffected into fresh soil.

W. H. Waite

Begonia Gloire de Sceaux

We doubt if one would be able to find this begonia in six commercial places in this country if one wanted to buy a small stock of it. Yet we have had the pleasure of seeing it growing to perfection in two private places in the vicinity of Philadelphia this season. We do not recall when it was sent out, but can remember growing it in England once ten years ago. We believe there is a great future before this plant and can safely say that if properly handled it would make an excellent plant for the Christmas season. The foliage is of a bronzy metallic lustre, crimson beneath. The flowers are freely produced during the winter months; color, a bright rose pink after the style of the light pink Lorraine, but the flowers are much larger in size.

The culture of this plant varies little from that given to the Lorraine family, with the exception that it will not stand quite as much sunlight and that the foliage should never be wet. If wet, the foliage soon gets rusty. We believe it would propagate as freely as the Lorraine family as one-year-old plants produce cuttings freely from the base during the month of March. The temperature to grow it in is from 60 degrees to 65 degrees at night during the winter months; pot in a rather light soil.

John Thatcher

The Innate Tendency of Life Toward Perfection

Recent articles in this periodical are suggestive of interesting problems in plant life. The question whether life has an inner tendency to advance was asked long ago, and the great natural philosophers have answered it in various ways. One of the most interesting and deeply reasoned theories is that of Nageli, the great German botanist and professor in Munich, who held that there is internal perfecting force which brings the evolution of organic being forward independently of the struggle for existence; so that, according to Nageli, even had there been limitless means and no struggle for existence, no survival of the fittest and death of the less fitted to survive, the progress of the life-series would have been much the same as it has been. His reasons were drawn from the nature of force and matter as well as his own profound knowledge of plant life and structure, and filled a book. Lamarck early in the 19th century explained evolution in a way which practically means that life has something in it which tends toward improvement. In animals this is the will of the animal to adapt himself to the surroundings, which results in the modification of his bodily structure through the increased use of special parts; and in plants a power of the plant to adapt itself directly to the environment, so that plants become necessarily better and better adapted to their habitats. Some botanists now hold to this definite improving tendency in plants, and I recently listened to a long paper by George Henslow before the Linnaean Society of London, meant to prove that this is the way that evolution comes about. Darwin, on the contrary, thought that variation is blind, that some new varieties are worse than the parents, some better, as determined merely by accident; and that the better varieties are selected and kept by Nature, as Darwin figuratively put it, and the worse allowed to die, and that thus life actually advances without any distinct innate tendency to progress. One of the best and most interesting contributions to this subject is the work of Hyatt, the Boston naturalist, on fossil mollusks of the Chambered Nautilus kind. He was able to follow the history of some species from their rise in the earlier geologic days to their extinction in later times and found that species begin with rather simple form of shell, this becomes more perfect and elaborate as time goes on, until the highest development of the species is reached. After that there is a decline, the shells become less elaborate and simpler, and finally the race disappears. The history of one of these species is like that of a wave moving over the surface of the ocean, which commences as a little elevation, grows bigger and bigger to a maximum and then dies out, its place taken by a succeeding wave which seems to get its impulse from the decline of the first. Or it is like the life of an individual, with infancy, youth, vigorous manhood, old age, and death.

Looking at the history of all life on earth we see two opposite results. First there has been progress. The

simplest green plants are very small spherical bodies, of course without root, stem, or leaf; or rather the plant-body is both root and leaf at the same time; that is, it both absorbs nutrients and makes food for itself. Two or three hundred of these plants must be placed side by side to make an inch, and only when myriads of them occur together do they catch the eye, not then as distinct structures but as tinges of green on earth or moist tree trunks, or a greenness of waters. These forms represent a kind of vegetation that must have been alone on the earth in very early times. Contrasting with these we see the highest plants, enormous in size, like the giant Sequoias and Eucalypts—the multiplication in mere bulk from the little green alga mentioned to these monsters being some millions of millions of times—and highly organized with root, stem, leaf, flower, fruit, seed, wonderful in complexity, in nice adaptation to life-work, in variety, in beauty and in usefulness. When we look into their inner organization with the eye of the microscope and find there a perfection and adjustment of all little organs the wonder becomes manifold. The effect is to compel one to ask himself, Is it possible that mere chance variation with selection in the struggle for existence, without any natural and fundamental principle of progress, has brought about such vast development, such multitudinous forms and stages of perfection?

On the other hand the simple plants still remain, which must be of very ancient standing indeed since we know of still higher forms from the earliest fossil-bearing beds. For inconceivable ages these little plants have lived on, one generation succeeding another without notable improvement, merely telling the same life-story with untiring repetition through endless years. There seems to be no internal perfecting principle in them. And this condition is reiterated in each stage or grade of evolution. The rocks have kept the record for us and tell the story of inveterate conservatism on the part of many forms—as well as of progress on the part of others. To come to present-day species we find some very interesting cases of fixity. There is a species of Horsetail, *Equisetum Telmateia*, found on the west coast of America from California to Alaska. The same Horsetail occurs in Europe, North Africa and Asia Minor to Persia. Owing to the perishable nature of the spheres, the species could not have been carried in sphere-form from one region to the other. When we consider the time which must have elapsed since there was any common point of origin between the section of the species in America and that on the opposite side of the world, and further find that the only difference which a careful study reveals, between the species here and the species there, is the occurrence of microscopic pores in the American forms, we realize that the organization of this plant is very fixed indeed. Of the same character is the discovery, made by Gray, that the floras of northeastern America and Japan have a striking

similarity, with many practically identical species, which must have been derived from the same ancestral plants. This connection was thousands of years ago. Since that time, these many species have remained practically stationary and unchanged. Likewise the high desert vegetation of eastern South America has numerous species in common with that of western Africa. The common species could not be carried from one continent to the other by winds, birds, or ocean currents, across the present expanse of water, in many cases, as Engler has shown. Only by some connecting land mass with high desert areas could these species have got from one place to the other; and such a road can not have existed in recent times. Hence the species which are alike on both sides of the Atlantic must have remained practically in their present form for long ages.

I think the general conclusion must be that there is no universal tendency to improvement, as an inherent quality of life itself.

We must take Mr. Burbank's phrases quoted by Mr. White in the issue of 3d March—"the upward, outward and onward movement of life," "life forces in their march," "life forces compared to a river pressing forward"—not as the pronouncement of accurate and wide study but rather as the delightfully exuberant faith of one who is at the same time a doer of things and a poet who attributes his own nature to the realm of plants which he loves.

Such are some of the broader aspects of the question. The more practical side of it concerns the cultivation of improved races of plants. If these races have this rise and fall, like the natural species described by Hyatt, then it is useless to seek to check the retreat of those which seem to be universally going down, as some assert to be the case with various potatoes, apples, etc. The study of constitutional deterioration would seem to be important.

Besides seed-selection and cultivation, two possible factors of deterioration that might well be discussed by experienced growers, are (1) vegetative selection and (2) the effect of the treatment of the parent plant on the character of the seedlings derived from that plant. As regards the latter factor, it is supposable that with some plants, the kind of cultivation which promotes good crops may, when long continued, weaken the seed. In such a case stock-plants for seed would have to be cultivated in a manner different from that which suits the set designed for yield. Has it been observed that exceptional vegetative vigor and yield in individuals of one generation, induced by high cultivation, is to the hurt of the following generation? Accurate observations bearing on any side of the subject, the effect of cultivation upon the character of seed and the constitution of resulting seedlings, will be of great theoretical, perhaps also large practical, value.

R. G. Leavitt

Rose Schneewittchen

The Polyantha roses are becoming more popular in this country, as they deserve to be. We have been running too exclusively to American Beauties and other long stemmed hot-house varieties. Not but what long-stemmed roses are good, but so are other kinds.

Amongst the various named varieties in this class Schneewittchen is one of the daintiest I have ever seen. I saw this first at a National Rose Show in London a few years ago and got some plants of it from Mr. Bunyard. We have grown it at Massachusetts Agricultural College and the photograph is from a plant in our grounds. The photograph speaks for itself. It shows a rose of uncommon beauty and one which the amateur will be delighted to cultivate. The remarkable ease with which these roses are grown, very properly adds to their popularity.

Watch Your Opportunity

The price of HORTICULTURE is but one dollar a year. Every page is edited to be helpful to its readers. Every inch of advertising represents a live business concern.

Eucharis

These pretty and useful flowers are becoming very popular and as a florist's flower might be a very profitable subject. *Eucharis grandiflora*, better known as *E. amazonica*, the Amazon lily, is perhaps the most productive and is under certain conditions very prolific giving three crops of flowers in a year. It loves a rich, somewhat heavy compost, which should be well drained, and never allowed to become sour.

It may be grown in pots, or may be planted out in benches, but to insure success by planting out a house should be devoted to it alone. Pots are to be preferred as the plants do not flower freely until the root area becomes restricted, or under pot culture, pot bound. The plants may be encouraged to grow until the pot or benches become filled with roots, when water should be withheld and the plants kept almost quite dry until the flower spikes appear. The eucharis has a tunicated bulb and, like the *hæmanthus*, which belong to the same natural order, *Amaryllidacæ*, develops the bud which becomes the flower spike while undergoing a period of comparative rest. Water may be freely given from the time the spikes appear until the flower is developed and until the new leaves which follow in the wake of the flowers have matured, then water should

again be withheld and the same process repeated. While the plants are being watered, fertilizer may be applied freely. A warm house with a minimum temperature of 65 degrees F. will suit them while growing. A good light is beneficial, and almost essential, but the plants should be protected from full sunshine in summer. If the plants can be given a little bottom-heat they will respond quickly and will also dry out quickly when drying out is desired. Thrips and mealy-bug are very fond of eucharis foliage, but the leaf is large and easily sponged. While water is being supplied the foliage may be syringed, but syringing during the drying out time would interfere with this somewhat unnatural method of treatment. If the plants are infested with mite the bulbs and roots should be washed clear of soil and all decayed parts removed, then dipped in a fairly strong kerosene solution which should be allowed to dry before repotting. The plants should not be repotted until it is absolutely necessary, as they do not like to be disturbed.

James Hutchison

Eel Worms or Nematodes

Growers often experience difficulty in getting at the cause of certain plant diseases, especially those characterized by wilting, drooping, loss of leaves, or a stunted growth, if not final death. If these symptoms appear and no reason can be discovered in ordinary pests or in the management of the house, it is well to pull up a plant and examine it for nematodes or eel worms, as they are commonly called, a class of vermes, to which the more highly organized earth worms belong. A zoological and not an entomological or a botanical subject, it has not received much attention in its relation to horticulture.

Nematodes occur in all soils, especially old sod and decaying vegetable matter, manure being a frequent source of infection. Under the microscope the worms appear as tiny, eel-like animals that pass rapidly across the field of vision with a wriggling motion. Although there are many species, the range of damage, in the northern region, has been limited to one species, known scientifically as *Heterodera radicola* (Greef.) Mull., but this one species does thousands of dollars worth of damage yearly.

The work of this animal (it is not an insect) is readily distinguished through the presence of small galls or protuberances on the roots of the plant attacked, that resemble the nodules of leguminous plants. These are brought about by an irritation to the root cells caused by the entrance and subsequent multiplication of the worms in the soft cortex of the roots. This irritation causes an abnormal growth in the cells, these in turn twisting and distorting the ducts which carry the sap to the leaves, thus shutting off in a greater or less degree the supply of food and causing the symptoms mentioned in the first paragraph.

The history of the nematodes *Heterodera radicola*, is interesting. The young worm is hatched from a bean-shaped egg 1-250 in. long, carried inside the female. The worm itself is about 1-75 in. in length, and of course invisible to the naked eye. By means of a boring arrangement it bores into young rootlets until wholly out of sight. Coming to rest it increases in size for a couple of weeks until it assumes a spindle shape. At this point the development differs according to the sex. The male transforms and gradually assumes the old thread-like, typical worm shape emerging fully mature, 1-17 in. in length, in about four weeks from the time of entrance.

In the meantime the female develops but not as rapidly as the male, being still immature when she comes out. Instead of turning worm-like again she continues to expand until pear-shaped, while other important changes occur in the various organs. Immediately after emerging the male seeks his mate, fertilizes the eggs, and dies. The females and eggs continue to develop for a couple of weeks to maturity, when the female dies and the eggs previously hatched start a new cycle. The females when full grown are 1-25 in. long, and visible to the naked eye as small bead-like objects in the galls. The eggs soon hatch after fertilization and a new cycle is started.

A number of plants are very susceptible to nematode attacks but unless very numerous the worms can do little harm if the plant is in a vigorous, healthy condition. Among these plants are greenhouse tomato, cucumber, muskmelon, begonia, cyclamen, clematis, fern, heliotrope, roses, and violets. In the North the injurious nematodes is confined wholly within doors, being unable to withstand the severe winter unpro-

tected. In the South, where winters are milder they can survive the year round in the open ground, and hence field crops, especially tomatoes, are often seriously injured by them.

The problem of control is not difficult. A sharp outlook must be kept up to insure prompt attention when the first signs of trouble appear. With greenhouses that are idle in the summer the soil may be rid by closing the houses tight and forking over the soil a few times during the summer. The temperature will go up to 150 degrees and this thorough drying out will "fix" the worms. On the other hand, freezing will destroy large numbers. The most practical method, to date, however, is to sterilize the soil.*

It must be borne in mind that in transplanting roses or violets a certain amount of the old soil remains and

if this is badly filled with nematodes, infection of the sterilized soil will rapidly follow. The only way to secure complete immunity would be to raise cuttings in sterilized sand and plant out-doors in new land where there can be no possible contamination from old greenhouse soil or infested manure piles.

In fields liming the soil at the rate of three tons unslacked lime to the acre is helpful. Catch crops as mustard can be sown and when plentifully covered with galls pulled and burned. Both these methods will not rid the soil, merely keep the worms in check. A better way is to break up new ground and abandon the old for a few years.

*See "Horticulture," December 9, 1905.

R. L. Adams.

Azaleas

Notwithstanding azaleas, with the exception of the Indian species, are deciduous they may be looked upon as among the most beautiful hardy shrubs. The low lands of many parts of New England are scenes of enchanting beauty when the swamp pink, *Azalea viscosa*, is in flower. These make beautiful groups when transplanted into favorable spots on the pleasure grounds. Another species that delights the lovers of flowers is *Azalea pontica* which grows in rich abundance on the Pontine marshes of Asia. *Azalea pontica* is a much more robust grower than the American species, but while its flowers are larger and more conspicuous the wood is stiff and the bush less graceful, nevertheless it is as hardy as our native species and as easily grown. The original variety has yellow flowers but the skill of the hybridist has produced a numerous family of many shades of color, from pale lemon, orange, and red to scarlet, or approaching thereto. A new race, imported from Japan, planted in the Arnold Arboretum, surpasses in brilliancy of coloring any yet seen, and is destined to make a sensation in the floral world. *Azalea mollis* is also very beautiful, bearing large flowers of a soft, delicate salmon which are very attractive. The hybrid varieties of the azalea are legion, and the variations of color and markings full of interest.

The azalea may be propagated in several different ways, this part of their cultivation being usually left to the nurseryman. The ordinary way, and the most certain, is by layers which root the second season. Some species can be increased by division of the roots. Grafting of the choice varieties upon the more vigorous species is greatly practical, because the plants are thus made more compact, symmetrical and floriferous. New varieties are raised from seed which has been pollinated either by insects or artificially. All the processes of propagation are rather slow but when the plants commence a healthy growth they soon make up for the tardiness in starting. Azaleas are not quite so particular as to soil as are rhododendrons; they do not absolutely require peat earth but will thrive on light sandy loam, but that must be enriched by a strictly vegetable fertilizer for, like the rhododendron, they can be easily killed by the application of animal manure especially if it is fresh and unfermented. They are, however, more at home in swamp muck and should always have a proportion of it when it is possible to procure it.

In laying out what in England is called an American plant garden, rhododendrons and azaleas should be

planted in close proximity to each other, because the colors are so different; the rich crimsons, deep purples, pale rose and pure white of the rhododendrons either blend, harmonize, or contrast with the yellow, orange, red pink, or scarlet of the azaleas and the effect is magnificent.

For cut flowers for house decoration azaleas are very useful and may be employed with good effect, lending themselves well to artistic arrangements in combination with suitable green. In this respect they surpass the rhododendrons, the trusses of which are too large when cut. For very large decorations they should be used as entire plants; well grown, dwarf bushes full of flowers are very striking under artificial light. Another reason for their use only in this manner is that the branches of a rhododendron cannot be cut without injuring the symmetrical shape of the shrub from which it will never recover.

The hardy azaleas are capable of forcing and if dug in the fall and placed in a cool cellar, they can be brought in to the conservatory at intervals where they will bloom freely and add greatly to the beauty of the display.

I remember well when the only two Indian azaleas extant were *Indica alba* and *purpurea*, but these were of tall, straggling habit and not capable of being grown into well formed specimens. Then came a new variety, *A. exqu岸ita*; this had better-formed flowers with elegant pencillings in the upper lobe of the blossom and of dwarf, compact habit, and from these all the magnificent varieties we now possess have sprung. In Indian azaleas the plant breeders and selectors seem to have done their best and for compactness of growth, prolific blossoming, and easy culture, for the conservatory and dwelling house, it is doubtful if they can be surpassed by any other decorative plant. The Belgians may be credited in part with effecting this improvement, and the cultivation and sale of this one species has become of great commercial importance. As the roots of azaleas are all fibre a very fine mixture of black earth and sharp sand is essential to their successful cultivation. All powerful fertilizers must be avoided, good drainage must be made, and the plant not watered too freely as to cause the soil to be soiled with water.

Our supplement

We take much pleasure in presenting our subscribers with the magnificent rose picture which accompanies this issue of HORTICULTURE. The variety represented, J. B. Clark, has not yet been disseminated long enough to prove its value as a forcing rose; those, however, who have seen it blooming in England are most enthusiastic over its marvelous beauty. The cost of the colored plates which we are issuing twice a month compels us to limit their distribution to regular subscribers hereafter. "A word to the wise is sufficient."

Meeting of American Rose Society

This is our last opportunity to say a word concerning the approaching rose festival at Boston before the opening of that interesting event. Visitors from far and near will be present in goodly number and will receive a hearty Boston welcome. The occasion combining as it does the Rose Society's best effort with the great spring show of the Massachusetts Horticultural Society, is one that will leave its impress on our horticultural progress and cannot fail to definitely benefit those who are so fortunate as to be present. Don't stay away if you can possibly attend.

The free seed abuse

The visit of the seedsmen to Washington, which our news columns record, was a well-timed and well-directed effort and will undoubtedly bear good fruit. It is almost too much to believe that the free seed abuse is to come to an end within the next few days, but the changing sentiment among those who have it in their power to accomplish this is most encouraging, and persistent work on the present lines of attack will surely bring victory sooner or later. It has been a long and seemingly, at times, hopeless struggle, and congratulations on the improved outlook are in order. We urge

upon every reader of these lines to write at once to his Senator and Representative asking that they oppose the appropriation for free seed distribution. The matter must be settled before March 31.

The Queen of Flowers

This is our second rose number and we feel somewhat proud of it. As the precursor of the Rose Society's exhibition it will be perused with especial interest by all who are seriously concerned in the reinstatement of the rose to its merited prominence in our gardens. In the rose Nature has given us her best in floral grace and comeliness. Its indescribable charms have gladdened human eyes and souls with sweet inspiration in times of gladness and of sorrow alike and from time immemorial it has been loved as no other flower has been loved. It is well that earnest endeavor should be made by those in whose life work rose growing forms so important a part to stimulate a new appreciation and to awaken more widespread interest in the work of adapting it to better withstand the rigors of our climate.

An outdoor exhibition at Dayton

To those who have for many years advocated the giving of an outdoor exhibition in connection with the annual conventions of the S. A. F., as well as to those friends of the society who have desired to see its activities extended in new and practical directions, the announcement in our news columns of the proposed outdoor display at Dayton will come as welcome news. That the nurserymen and garden plant growers will take prompt and enthusiastic advantage of this opportunity to display summer blooming and decorative material in proper form before the trade cannot be doubted and that a ready sale for the goods shown and many more besides will be found in a city which is credited with having made remarkable progress in the appreciation and practice of civic and home adornment is a foregone conclusion. The idea is a success from the start.

The proposed national flower show

The national flower show project has again been taken up by the S. A. F. committee appointed at Washington last August and an active canvass of the trade has been started to secure the guarantee fund of ten thousand dollars, which is regarded as necessary before anything else can be done. We hope to see the committee successful in raising this money. Even though the show should not be a big financial success there can be no question as to the ability of the great floricultural interests of the country to assemble together the material to make an exhibition of unprecedented extent and grandeur which cannot fail to benefit the trade to a much greater extent in the aggregate than the value of any financial risk which may be taken. It is to be hoped that the right sentiment may be aroused and that work may begin promptly, as the time is already too short if the show is to be held as proposed—in the spring of 1907.

PERFUMED FRAGMENTS.

"My love has breath o' roses,
O' roses, o' roses,
Wi' arms o' lily posies,
To fauld a lassie in."

"O gin my love were yon red rose,
That grows upon the castle wa',
And I mysel' a drap of dew,
Down on that red rose I would fa'."

"Whatsoe'er of beauty
Yearns and yet reposes,
Blush, and bosom, and sweet breath,
Took a shape in roses."

"Look to the blowing Rose about us—
'Lo,
Laughing,' she says, 'into the world
I blow,
At once the silken tassel of my Purse
Tear, and its Treasure on the Garden
throw.'"

"There grows a bonnie brier bush in
our kail yard,
And white are the blossoms o't in our
kail yard,
Like wee bit cockaids, to deck our
hieland lads,
And the lassies lo'e the bonnie bush
in our kail yard."

"When the young Rose, in crimson
gay,
Expands her beauties to the day,
And foliage fresh her leafless boughs
o'erspread;
In homage to her sovereign power,
Bright regent of each subject flower,
Low at her feet the violet bends its
head."

Many a pouting lip has flush'd
In rival beauty by thy side;
Many a maiden cheek has blush'd
In vain to match thy crimson pride.
The pink may burst its varied hue,
The violet its azure blue,
The lily claim the snow its own;
But still thou reign'st, undimmed,
alone."

"I love the Rose—it is a noble flower;
In color rich, and opulent of
leaves;
And when her summer garland
Flora weaves,
She sees no fairer beauty in her bow-
er,—
None which, so redolent of perfume
flings
A sweeter fragrance on the zephyr's
wings."

"I love the Rose—for bards have ever
loved
The queen of flowers—the flower of
beauty's queen,
When in the hedgerow or the garden
seen,
Or pluck'd and proffer'd, by some
friend belov'd,
To gentle lady, and by her caress'd,
Then braided with her hair, or worn
upon her breast."

WHAT THEY SAY OF US.

George W. Patten of Lowell, Mass.,
is seriously ill at a sanitarium. He
has had three shocks within a short
time and the Lowell lodge of Elks ad-
vised his removal where he could re-
ceive special care.

DEAN HOLE'S TRIBUTE TO THE
ROSE.

"He would who would have beauti-
ful Roses in his garden must have
beautiful Roses in his heart. He must
love them well and always. To win,
he must woo, as Jacob wooed Laban's
daughter, though drought and frost
consume. He must have not only the
glowing admiration, the enthusiasm,
and the passion, but the tenderness,
the thoughtfulness, the reverence, the
watchfulness of love. With no eph-
emeral caprice, like the fair young
knight's, who loves and who rides
away when his sudden fire is gone
from the cold white ashes, the cav-
alier of the Rose has semper fidelis
upon his crest and shield. He is loyal
and devoted ever, in storm-fraught or
in sunny days; not only the first upon
a summer's morning to gaze admir-
ingly on glowing charms, but the first,
when leaves fall and winds are chill,
to protect against cruel frost. As
with smitten bachelor or steadfast
mate, the lady of his love is lovely
ever, so to the true Rose-grower must
the Rose-tree be always a thing of
beauty. To others, when its flowers
have faded, it may be worthless as a
hedge-row thorn: to him, in every
phase, it is precious. I am no more the
Rose, it says, but cherish me, for we
have dwelt together; and the glory
which has been, and the glory which
shall be, never fade from his heart."
Dean Hole.

PROTECT THE BIRDS.

Shooting song birds is possibly an offence
against good taste, and inpolitic in a coun-
try afflicted with insect pests, but to pun-
ish it in the severest manner known to the
law seems absurd, especially when the of-
fenders are immigrants innocent of evil
intention. The New York judge who did
his sentimental worst for poor Italian la-
borers after keeping them hanging about
the courts for four months of suspense,
might very well have remembered who
said "Ye are of more value than many
sparrows."

This is the "sentimental worst" of
the Boston Pilot. It is also cant. The
fact is patent that shooting song birds
is the peculiar vice of the southern
Italian especially, who with his prac-
tice of picking up birds for his family
pot has made Italy a songless coun-
try. It is necessary to break his vi-
cious habit at the start, and every one
convicted of killing a song bird should
receive the severest sentence of the
law, in the interest of the preserva-
tion of the life of mankind upon earth.
It ill becomes an American newspaper
to speak of killing robins, bluebirds,
song sparrows, wrens, juncos, red
wings, bobolinks, as "possibly an of-
fense against good taste" and "im-
politic in a country afflicted with in-
sect pests." That is a jaunty way to
treat one of the most important mat-
ters of public concern. As for the
quotation from Jesus, its use is not
only cheap sentiment, but almost un-
pardonable cant. It is irrelevant to
the question of imposing an exem-
plary penalty on a bird killer. The
time to do that is precisely now, be-
fore the immigrant has bought an air
gun, takes to hunting secretly, and
brings home with him pockets stuffed
with bird corpses—which is then
practice wherever they are found.—
Springfield Republican.

TEN BEST CLIMBING ROSES.

Editor HORTICULTURE:

Would you kindly name the best ten
climbing roses for Massachusetts,
those best for pillar and trellis with
no wall protection so noted, and their
respective colors?

Thanking you for same, I am C. P.

Editor HORTICULTURE:

Dear Sir—In reply to your inquiry,
in the writer's opinion the following
named varieties are the best ten
climbing or rambler roses for pillar
and trellis with no wall protection:

Debutante, soft rose double.
Lady Gay, cherry pink, double.
Hiawatha, intense crimson, single.
Farquhar, pink, double.
La Fiamma, flamecolor, single.
Sweetheart, white, pink in bud, dou-
ble.
Dorothy Perkins, pink, double.
Wedding Bells, pink and white, dou-
ble.
Philadelphia Rambler, intense crim-
son, double.
Minnehaha, dark rose color, double.
Very truly yours,
M. H. WALSH.

TO EXTERMINATE THE CODLIN
MOTH.

On an Australian steamer which ar-
rived last week at San Francisco were
eleven cases consigned to the State
Board of Horticulture, each filled with
baby codlin moths. The codlin moth,
like the rest of its kind, has a natural
enemy, and, under normal conditions,
has little chance of becoming a pest.
When the codlin moth first arrived in
this country from the Antipodes it
found in the California orchards a
veritable paradise. There was food
galore and no enemy to thin the ranks
of the ravagers. The codlin moth grew
in numbers, appetite and audacity,
and the orchardists were in despair
when Professor Compere of the State
University Agricultural Department
discovered in Australia the tiny para-
site that was the codlin moth's natu-
ral enemy. A colony of these para-
sites was brought to this country. De-
tachments of them were turned loose
in moth-infected orchards, and under
their onslaught the codlin moth is
rapidly disappearing. A stock of
these parasites is always kept on
hand by the State Board of Horticul-
ture for use whenever the codlin
moth puts in an appearance. These
parasites will feed on nothing but cod-
lin moths. The available codlin moth
supply is getting scarce, and as the
work of the beneficial little parasites
has not yet been completed, the State
has imported from Australia eleven
cases of codlin moth larvae with
which to feed those parasites for
whom moth-infected orchards have
not yet been found.

PERSONAL.

James Glass of Baltimore met with
a painful accident at his home on the
14th inst., a half barrel of white lead
falling on his foot.

Fred. Sander and T. Mellstrom ar-
rived in New York on the Cunarder
Lucania from Liverpool. Mr. Mell-
strom succeeds to the position of
American representative for Sander &
Sons, formerly held by Mr. Dimmock.

NEWS OF THE CLUBS AND SOCIETIES.

AMERICAN ROSE SOCIETY.

Intending exhibitors at the annual exhibition in Boston, March 23-24, are requested to make prompt application for space, specifying the classes in which they propose to compete. Entry cards, schedules, etc., can be obtained from the secretary. All entries must be in by Thursday, March 22.

Those wishing to compete in the mantel and table decorations are notified that tables and mantels will be provided by the society for all who make definite entry by Tuesday, March 20. Tables will be of uniform size, limited to eight plates.

The Program.

We repeat the program of the meeting at Boston as published last week. A paper by Dudley M. Pray of the Eastern Chemical Company, Boston, on "Soluble Fertilizers" has since been added.

The annual meeting of the society will open at 7.30 p. m. on Friday, March 23.

The transaction of business will be in the following order: Calling to order; Reading minutes of previous session; Reports of standing committees; Reports of special committees; Miscellaneous business; Essays—Discussions; Election of officers; Appointment of committees; Adjournment.

Under the order of essays and discussions, addresses will be made as follows:

"Recent Advances in the Practice of Rose Growing for Cut Flowers," by J. J. Curran, Elmira, N. Y.

"The Retailer's Part in the Introduction of New Roses," by George Asmus, Chicago, Ill.

"The Mail Order Trade," by P. J. Lynch, West Grove, Pa.

"The Deterioration of Forcing Roses: Its Causes and Effect." A discussion, to be opened by A. Farenwald, Roslyn, Pa.

Question—Should the Rose Society Issue Certificates to New American Roses?

On Saturday evening, March 24, a banquet will be tendered to the American Rose Society visitors by the Allied Horticultural Interests of Boston, under the auspices of the Gardeners' and Florists' Club of Boston, at the Hotel Brunswick.

WM. J. STEWART, Sec.,
11 Hamilton Place, Boston.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The spring flower show of the Massachusetts Horticultural Society, which will open at Horticultural Hall, Boston, on Friday, March 23, promises to be one of the notable events of the present season.

In connection with it will be held the annual exhibition of the American Rose Society, which will afford a rare opportunity of witnessing the perfection of bloom and beauty attained in the cultivation of this queen of flowers by the principal growers throughout the country.

Other features of the combined ex-

hibition will be a magnificent display of spring flowering bulbs and Easter plants, together with Indian azaleas, orchids, and carnations. There will be in addition collections of winter apples and vegetables.

The schedule of the Massachusetts Society offers 210 prizes to the value of \$1200, in addition to medals, while the Rose Society's list aggregates 188 prizes, ranging from \$5 to \$250 each.

The exhibition will open on Friday, March 23, at 6 o'clock p. m., continuing Saturday and Sunday, March 24 and 25, from 10 a. m. to 10 p. m.

The Brookline Band of twenty-five instruments will give concerts on Saturday evening from 7.30 to 9.30 and on Sunday afternoon and evening from 3 to 5 and 7.30 to 9.30.

WM. P. RICH, Secretary.

J. F. HUSS
Judge at Boston Rose Exhibition

HARTFORD FLORIST CLUB.

The regular meeting of the club was held on Friday evening, 9th inst., President Huss in the chair. The annual election of officers took place, with the following result: President, J. F. Huss (third term); vice-president, Joseph Vidbourne; treasurer, Robert Scrivener; secretary, Alex. Cumming. President Huss exhibited two plants of a new type of Impatiens, introduced by Lemoine, and two fine specimens of the new hybrid Cineraria stellata, for which he was awarded a certificate of merit.

The club as a body recorded its regret at parting with its late efficient secretary, C. N. Ruedlinger. Mr. Ruedlinger has been appointed forester on a large estate near Minneapolis, Minn., and will leave for the West in a few days. As a proof of the esteem in which he has been held the club members and other friends presented Mr. Ruedlinger with a gold watch chain and appendage. He leaves Hartford with the best wishes of the entire horticultural community.

ALEX. CUMMING.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club held its regular meeting in Handel Hall March 8, P. J. Hauswirth presiding.

The meeting was largely attended by members in and out of Chicago. The trustees reported they had leased the hall for another year, and re-leased it to the Retail Florists' Association for their meeting nights.

Mr. Wilson, chairman of the committee on exhibits, presented the report of the annual Carnation Show. A vote of thanks was extended to Hild Bros, for their fine vase of stocks.

Papers were read on carnations by J. D. Thompson and Jos. F. Klimmer.

After the reading of these papers preparations were made to attend the first annual convention of the Illinois State Florists' Association at Peoria, Ill., Friday, March 9.

The Carnation Show.

The annual Carnation Show held under the auspices of the Chicago Florists' Club, Thursday, March 8, while not so large as in former years, was far better attended than the exhibitions of the past two years. The exhibits which attracted the most attention were Seedling No. 49, grown by Chicago Carnation Co. of Joliet, Ill.; Robt. Craig, grown by Thompson Carnation Co. of Joliet, Ill.; Seedling No. 55, grown by Wietor Bros. of Chicago, Ill.; stocks of unusual size, fine flowers on stem 4 to 5 feet in length, grown by Hild Bros., private gardeners at Lake Forest, Ill.

Other exhibitors were: Chicago Carnation Co., Prosperity, Enchantress, Lieut. Peary, Glendale, Variegated Lawson, Fiancee, John E. Haines, Mrs. Patten, Skyrocket, White Lawson, J. A. Valentine, Lady Bountiful, Cardinal, Daybreak Lawson or Melody, Delight, Lawson, Imperial, Harlowarden; H. Luedtke, Maywood, Ill., Enchantress Sport; Fred Stielow, two seedlings, Belle, Lorna; Wietor Bros., White Lawson, Seedling No. 55, Fred Burki, Estelle, Harlowarden, Lawson, Lady Bountiful, Lieut. Peary, Enchantress, Nelson Fisher; Anton Then, Enchantress, White Lawson, Cardinal, Lawson, Lady Bountiful, Winnemac; Jensen & Dekema Carnation Co., Nelson Fisher, Walcott, Patten, Enchantress, Lawson, Boston Market; Chicago Rose Co., new rose, Miss Kate Moulton; Weiland & Risch, rose Killarney; R. Fischer, Great Neck, N. Y., Carnation Abundance, Freesia Purity; Geo. Field, Washington, D. C., new rose, Tom Field; Laisle Floral Co., Keokuk, Iowa, a creamy white rose which was pronounced a sport from the Bride.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next meeting of the club will be held at Horticultural Hall, Boston, on March 20. The lecture of the evening will be by David Lumsden, on "Plants and Bulbs Most in Demand for the Easter Trade." There will be other attractions, and none can afford to miss this meeting.

W. N. CRAIG, Secretary.

CINCINNATI FLORISTS' SOCIETY.

The annual exhibition of carnations given by the Cincinnati Florists' Society was held at the club rooms during the afternoon and evening of Saturday, March 10. The display was a magnificent one, and it is doubtful if there was ever its equal outside of the exhibitions of the national society. Here nearly all of the latest and best varieties from all parts of the country were viewed and admired by the florists and public as well.

Secretary Ohmer worked hard to make the show a success, and was agreeably surprised at the result of his efforts. The exhibitors were E. G. Hill Co., Richmond, Ind.; F. R. Pierson Co., Tarrytown, N. Y.; Honaker, Lexington, Ky.; George Beyer, Toledo; Miami Floral Co., Dayton; Weber & Son, Oakland, Md.; Heller Bros., New Castle, Ind.; W. C. Hill & Co., R. Witterstaetter, George & Allen, Huntsman & Co., Wm. Murphy, Thos. Windram and Frank Schneider. Two new varieties were up for certificates, but neither received the required 85 points. One worth mentioning was E. G. Gillett, a beautiful red, which scored 86 points in '95. This variety is grown by W. E. Hill of Clyde, O., and will be heard from later. The other one was Maybelle, grown by H. Weber & Son, which scored 83 points. At this meeting, the S. A. F. medals were awarded, R. Witterstaetter receiving the silver medal with Afterglow, and The Minneapolis Floral Co. the bronze medal with their new rose, Miss Kate Moulton.

The following is a list of the prize winners with varieties too numerous to mention: E. G. Hill Co., F. R. Pierson Co., Honaker, the Florist, H. Weber & Son and R. Witterstaetter. The F. R. Pierson Co. deserve special mention; considering the distance their flowers were shipped, they were in fine condition. Their display included White, Red, Variegated and Pink Lawson, and it is hard to say which was the best.

During the afternoon the out-of-town florists paid a hurried visit to some of our local greenhouse plants, and in the evening were entertained at a banquet given by the society at the Burnett House. Those present were: John Larsen, Wm. Hack, Henry Reiman, Homer Wiegand, E. A. Nelson, John Hartje, Sidney Smith, Fred Hukride, Wm. Billingsly and Irwin Berterman, Indianapolis; Herbert Heller, New Castle, Ind.; H. M. Altick, John Boehmer, Geo. Bartholomew, Dayton; E. G. Hill, G. R. Gause, John Evans and Geo. H. Fuller, Richmond, Ind.; Chas. Pommerd, Amelia, O.; Jno. Weber, Oakland, Md.; Wm. Reeser, Urbana, O.; O. S. Honaker, Wm. Gerlack, Lexington, Ky.; C. P. Dietrich, Maysville, Ky.; F. R. Pierson, Tarrytown-on-the-Hudson; Theo. Bock, Hamilton, O.; Mrs. Louis Koenig, Mrs. Sanford Link, Portsmouth, O.; C. H. Kingsman, J. Wettle, Louisville; and local members of the society, making 63 all told. President Wm. Murphy served as toastmaster, and the remarks of our guests were interesting and instructive. H. M. Altick, vice-president of the S. A. F. did not lose this opportunity to boom Dayton and urge all present to attend the coming convention. After dinner the regular monthly meeting of the society was

held. E. G. Gillett was appointed a committee of one to confer with the Fall Festival Committee regarding the floral exhibit.

COLUMBUS FLORISTS' CLUB.

The regular first meeting of the club for March was held Tuesday evening last in Iroquois Hall as usual. As the very important matter of packaging the flower and vegetable seeds, which had been procured from the Livingston Seed Company, for the school gardens was in order, a goodly number of members were present. It is the club's custom to purchase a sufficient amount of bulk seeds, to put up the required number of packets of flower and vegetable seeds needed for distribution to the scholars of our public schools. As it will take several evenings to complete this work, frequent meetings will be held until it is finished. A letter was received from Secretary William J. Stewart of the American Rose Society, inviting members to attend the annual meeting and exhibition of this society, to be held in Boston, March 22-26 next.

S. S. PENNOCK

Judge at Boston Rose Exhibition

ST. LOUIS FLORISTS' CLUB.

The St. Louis Florists' Club held its regular meeting March 8, with an attendance of twenty members. This being a rose meeting, the prizes were awarded to the following:

J. F. Ammann, first on Richmond, and first on Bride; W. J. and M. S. Vesey, first on Bridesmaid; A. Jablensky, second on Bride and second on Bridesmaids; H. J. Weber & Sons, first on Golden Gate. There was a vase of mixed roses exhibited by J. F. Ammann, not for competition; also a nice vase of Miss Kate Moulton, exhibited by Indianapolis Floral Co.

WORCESTER CO. HORTICULTURAL SOCIETY.

The Worcester County Horticultural Society (Mass.), held its first flower show of the season on March 1. The collection of orchids shown by George McWilliam, gardener for G. M. Whitin, was exceedingly fine. Leonard C. Midgeley of the Worcester Conservatories and H. F. A. Lange had special exhibits of roses.

ILLINOIS STATE FLORISTS' ASSOCIATION.

The first annual convention of the Illinois State Florists' Association was held at the City Hall, Peoria, Ill., with an attendance of seventy-five. Mayor Tolson gave the address of welcome, which was responded to by J. C. Vaughan.

The morning session was devoted to perfecting the organization and forming plans for the coming year; there was also a motion passed that the Association co-operate with the Experimental Station at Urbana, Ill. On invitation of the Peoria Florists' Club, the visitors attended a sumptuous dinner given in honor of the occasion.

The afternoon session was called to order at 2 P. M., then followed framing of the constitution and election of officers for the ensuing year. The officers are as follows: President, J. F. Ammann of Edwardsville, Ill.; first vice-president, J. C. Vaughan, Chicago; second vice-president, H. W. Buckbee, Rockford; third vice-president, John Willis, Danville; fourth vice-president, Albert T. Hay, Springfield; fifth vice-president, Oscar Augspurgur, Peoria; sixth vice-president, Jos. Heintz, Jacksonville; seventh vice-president, A. W. Webster, Centralia; secretary, Prof. H. Hasselbring, U. of C.; treasurer, Geo. A. Kuhl, Pekin, Ill. This body constitutes the Executive Board, to have jurisdiction of and represent the different districts.

Invitations were received from Bloomington and Springfield, inviting the association to hold their next convention in either of the two towns, but no place was decided on.

HUNTINGTON HORTICULTURAL AND AGRICULTURAL SOCIETY.

The Huntington Horticultural and Agricultural Society held its annual carnation exhibition on March 6, in the trade school building, Huntington, N. Y. There was a good display of carnations, violets and spring bulbous flowers. Awards were made as follows: Carnations, Dark pink: H. T. & A. H. Funnell, first with Lawson. Light pink: H. T. & A. H. Funnell, first with Enchantress; Geo. Ashworth, second with Enchantress. White: Geo. Ashworth, first, Wm. O'Hara, second. Scarlet: Cottage Gardens, first with Robert Craig. Crimson: J. D. Cockcroft, first with seedling; Cottage Gardens, second with seedling; H. T. & A. H. Funnell, third with Harlowarden. Any variety not disseminated: J. D. Cockcroft, first with seedling white; F. R. Pierson Co., second with Winsor; Cottage Gardens, third with seedling white. Assorted: J. D. Cockcroft, first; Wm. Eccles, second. Tea Roses: Jas. Kirby, first. Violets: H. T. & A. H. Funnell, first; Wm. O'Hara, second. Mignonette: Geo. Ashworth, first. Specimen flowering plant: H. T. & A. H. Funnell, first for Azalea; Wm. O'Hara, second for Baby Rambler rose. Special awards were given to R. Fischer, Great Neck, L. I., for Freesia Purity; to Robert Hillock for spring flowers; and to Geo. Ashworth for greenhouse vegetables.

The judges were William Donald and Walter Shaw.

Among visitors present was Wm. F. Ross, representing F. R. Pierson Co. There was a large attendance.

NEW YORK FLORISTS' CLUB.

Ladies' night, Monday evening, Mar. 12, was probably the largest attended meeting in the club's history, over two hundred being present, of whom fifty were ladies. Among the visitors were Messrs. Fred Sander and T. Mellstrom, Peter Crowe and Phil. Breitmeyer.

Mr. Nash's lecture was illustrated by beautifully colored orchid slides loaned by Mrs. Cornelius Van Brunt. Mr. Sander made a felicitous address. Songs were rendered by Mrs. J. P. Cleary, Miss Nugent, Rickard Bros., James Sage and others, all of whom did well; but to Mr. Sage must be given the laurel wreath for his "old-time" songs, which were the hit of the evening. The event certainly was a rousing success in every respect. Lager & Hurrell and Julius Roehrs Co. exhibited orchids; H. Metz, a basket of Asparagus Sprengeri, and Guttman & Weber, a vase of carnation Victory. The business of the evening was quickly disposed of. The secretary was instructed to write the members of Congress representing New York City, protesting against the "free seed" distribution by the government. Thirteen new members were elected and six proposed. Everything else except recreation was laid over for the April meeting. An ample supply of dainties for the ladies and solids for the gentlemen had been prepared by Mine Host Nugent and were distributed by that gentleman in his customary lavish manner. Dispersed about midnight.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.

The regular monthly meeting of this society was held at the usual place on the 7th inst., President Harrison in the chair. The attendance of members was large, making a record for such. Five new members were elected to active and seven nominated to active membership; also two to honorary membership.

The chief business was the drafting of a schedule for the coming fall flower show. It is the earnest endeavor of the society to make this exhibition a thorough success. Some good prizes are already forthcoming. The silver cup by Mrs. Percy Chubb has been placed upon carnations, calling for 50 carnations in 6 varieties (standard) arranged for effect. Generous gifts as prizes have also been given by Mr. and Mrs. Maxwell, Weeber & Don, Stumpp & Walter, and Vaughan's seed store.

The floral exhibits by members at the meeting were many, diverse, and highly interesting, showing throughout superb cultivation. Alex. Mackenzie staged a lovely table containing a vase of mixed carnations, bunch of Princess of Wales violets, a beautiful pan of white hyacinths, vase of roses, pots of cyclamens, Primula stellata, Forbesii, and a gorgeous collection of Primula obconica, all being exceedingly well grown and of beautiful colors; also some fine bunches of greenhouse tomato, Stirling Castle being the variety. S. J. Trepass staged an equally beautiful table of cut

ALEXANDER MONTGOMERY.

President of the American Rose Society.

flowers, flowering and foliage plants. He had a fine vase of mixed carnations, also pots of cyclamen, cineraria, Primula obconica, and a grand pan of yellow tulips. F. F. Meyers had on his table some good carnations, a nice flowering bush of white lilac, and some superb spikes of antirrhinums. H. Matz showed a well-grown pan of Asparagus Sprengeri. F. Mense had a lovely bunch of one hundred Princess of Wales violets.

The Mackenzie prize for the best flowering plant was won by T. Harrison with a basket of Begonia Gloire de Lorraine, which was the admiration of all present.

S. J. Trepass' new seedling carnation, "Maxwellton," a grand white, with Lawson blood, received the society's certificate of merit, scoring 87 1-2 points.

F. R. Pierson Co., Tarrytown, showed a vase of their grand new carnation, "Winsor."

JOHN F. JOHNSTON.

DETROIT FLORISTS' CLUB.

This club met on March 7 and had an interesting session. Talks on forced circulation by Mr. Dodson, and on hot water heating by Mr. Taylor,

were on the program. The latter gentleman read some letters which he had received from a Cleveland firm, but seemed unfamiliar with the points on which they touched. Although he spoke of a saving in fuel to the extent of 20 to 25 per cent., he was at a loss to demonstrate the cause of such. He submitted the diagram to Mr. Dodson for explanation, who, after a few minutes' reflection, called for a blackboard. He then went on to show the workings of the system to which he did full justice.

After the several discussions on Mr. Taylor's system, Mr. Dodson took the floor in his own behalf, explaining the use of the pump in promoting circulation. The ordinary hot water system being based entirely upon gravity as the circulating force, is often too slow in movement to ensure uniform or economical heating. The best way, according to Mr. Dodson, to overcome this is to assist gravity by use of a pump, which hurries the circulation so as to allow a drop of not more than 20 per cent. in the temperature of the return water.

The kind of coal more suitable for firing was another topic taken up, the majority being in favor of soft coal.

Speakers made general use of the blackboard in explaining their piping systems and boilers, and it seemed more like a plumbers' or steamfitters' meeting than a florists' club.

During the evening the president called on Harry von Koolbergen, a traveling salesman from the land of azaleas, who in a brief talk described some methods in use by his countrymen.

Watering systems will be the topic at a future meeting and demonstrations will be made at a local greenhouse.

B. Schroeter and his son have been asked to address the next meeting on the handling of holiday plants.

GARDENERS' CLUB OF BALTIMORE.

The annual meeting and election of officers of this club was held on Monday p. m., March 12, at the Hotel Lexington. The following officers were elected: President, W. G. Lehr; vice president, Chas. L. Seybold; secretary, J. J. Perry; financial secretary, G. Talbot; treasurer, F. G. Burger; librarian, C. M. Wagner. A banquet was held in the dining room of the hotel and was participated in by one hundred guests. E. A. Seidewitz acted as toastmaster. Responses were made by John Burton, D. T. Connor, G. O. Brown, Robert Craig and others. J. E. Haines displayed a number of his seedling carnations.

CLUB AND SOCIETY NOTES.

The April meeting will be Rose Night at the New York Florists' Club.

The Kentucky Society of Florists held its regular meeting on March 7 at J. E. Marret's, with a good attendance.

The Hartford Florists' Club is contemplating the merging of that body with the Connecticut Horticultural Society. A conference committee has been appointed with that object in view and consolidation is looked on favorably by both organizations.

The executive committee of the Society of American Florists and Ornamental Horticulturists has certainly shown its high appreciation of the Gem City, and their national convention in Dayton will surely be made a notable occasion.—Dayton Journal.

The Flatbush Florists' Bowling Club had a prize contest last Thursday. Pres. John Scott of New York Florists' Club won the first prize, a tobacco jar; and J. Austin Shaw, the second, a silver inkstand. The latter was put up again and was won by Henry Daille-douze. There were eleven competitors.

At a meeting of the florists at Dayton, Ohio, on Monday, March 12, the Dayton Florists' Club was organized and officers elected as follows: President, J. B. Heiss; vice-president, Charles Lutzenberger; secretary, Horace M. Frank; treasurer, H. H. Ritter. Horace M. Frank was recommended by acclamation for the position of superintendent of S. A. F. trade exhibition.

MECHANICAL WATERING FOR GREENHOUSES.

(Read before the Detroit and Washington Florists' Clubs by Louis Wittbold.)

It is only a short time ago that all watering in greenhouses was done with the watering can and those of us whose fathers and grandfathers were gardeners before us, can well remember how these gentlemen condemned the hose when it was first used for greenhouse watering. They argued that the hose would drown everything in sight and that it would be impossible to give individual care to the plants except by watering individually with the can. The world has made progress and the old fellows have gradually given in to the younger generation until our fathers had the privilege to do some of the watering with the hose and some with the can; they had to help out, as it were, with the old stand by (the can) to make good for the mistakes of the hose.

The world has made still further progress and we the present generation have as a rule discarded the can entirely and have outgrown or overcome the habits of our fathers and grandfathers and are using the hose entirely for all watering in the greenhouse. Looking back at our predecessors we smile and pat each other on the back and feel our superiority to such a degree that we generally find it necessary to go out and buy a size larger hat.

Let's not be too hard on the old fellows but let's give them due credit for the advancement they accepted and allowed us to accept. We are little if any quicker than they to accept new ideas and our present advancement has only come about through the general evolution of things.

The world is progressing; the day of the hose for greenhouse watering will come to a close, just the same as the can is fast saying good-bye to all modern places—in fact many of them could probably not boast the possession of one, especially not one such as grandfather had that carried about a gallon of water, with a spout three feet long and which was just the thing for the boys to use as a brass band to march around the greenhouse with.

Mechanical watering is the next step in the chain of progress, which will revolutionize the present mode of watering and which will probably undergo the same evolution of adoption and rejection until its superiority is as firmly established as that of the hose over the can. How long would it take to water and syringe a large modern place with a can and a hand syringe and could the job be done as well as with a hose? We answer this question with a smile but could we get hold of some of the old fellows who have long since passed away we could get up a pretty good argument and it would take years of time before they would accept our idea. We do not know exactly how long it would take to water and syringe a given number of square feet with a can, but there is no necessity to try to find out, as the time consumed is so long that we could not afford to adopt so expensive a method to do our work. How long does it take to water a given number of square feet with a hose? This is the age of hose and I will let every one answer the question for himself, as we are all

familiar with its use and results. How long would it take to water a given number of square feet with a watering system is a question that can be answered by another question. How much water is your system or pump able to supply? A system of this kind will take all the water instantly that a pumping system will supply.

The world is making progress and, as only better things than what we have had before help in the grand march of progressive advancement, mechanical watering will surely use up several links in this chain after its benefits are fully realized by brother florists.

BUSINESS CHANGES.

C. B. Service has opened a retail store at 3 Shenango St., Sharon, Pa.

Fisher & Rocklin have opened a retail store in the Boudeman block, Kalamazoo, Mich.

R. G. Wilson of Brooklyn will do a wholesale and retail business at 48 W. 30th street, New York.

The business of the Chatham Rose Co., Chatham, N. J., has been purchased by H. A. Neuner.

J. H. Brown has disposed of his business at Sebring, O., to J. H. Hall, and has bought a larger plant at Salem, O.

Herendeen Manufacturing Company's New York office has been removed from 39 Cortlandt street to 296 Pearl street.

E. W. Comley has joined his brother George A. in business in Washington, D. C., and the firm will hereafter be Comley Bros.

W. McRae Thompson has resigned as manager of the Acker Flower Shop, of Philadelphia. John Kraus from New York succeeds to the position.

E. E. Fairbanks of Athol, Mass., has sold his house and greenhouses to Clifford H. Smith. The houses are well stocked with cucumbers, which are valued at \$3000.

H. R. Mitchell, senior member of the firm of The H. R. Mitchell & Son Co., of Waterville, Me., has disposed of his interest in the business to George Fred Terry. The firm hereafter will be Mitchell & Co. It is said that additional greenhouses and a retail store on Main street are among the improvements contemplated.

PLANT NOTES.

The advance sale of geraniums indicate a very heavy demand for the coming season.

Plant dealers report the sales of begonias in all classes and species this season as far ahead of any recent year.

There is a divergence of opinion among rose forcers as to whether Killarney gives best results as own root or grafted plants.

Frau Lilla Rautenstrauch, one of the newer roses, said to be a cross between Goldquelle and Caroline Testout, is being looked upon with much favor in England as a forcing rose. The flowers are flesh white flushed with apricot yellow.

THE ROSE.

(A paper read before the Pittsburg and Allegheny Florists' and Gardeners' Club by Neil McCallum.)

The rose has been immortalized by the most ancient authors. Homer's allusion to the rose in the Iliad and Odyssey are among the earliest mentions we have. Mr. Paul, in his Rose Garden, gives a translation from the Greek Poetess Sappho, who lived 600 B. C. It is:

"Would Jove appoint some flower to reign
In matchless beauty on the plain,
The Rose (mankind will all agree),
The Rose the queen of flowers should be."

Historians tell us that those luxurious persons, Cleopatra and Nero, spent immense sums of money for roses and rose petals to strew on the floors and seats of their banquet halls. Pliny, also, tells us that it is necessary to move the earth to a depth of two feet in their cultivation. Coming down to modern times, Dr. Lindley says the Pharmacopean could be formed of the rose family alone; and Sir R. Christison tells that it takes 100,000 roses, the produce of 10,000 bushes of the Damask rose, to yield 180 grains of attar of roses. The Damask rose is parent of the hybrid red roses of today; it was brought to Europe from Syria by one of the Crusaders returning from the Holy Wars.

Roses will do fairly well in almost any soil, providing it is not a wet or a loose, sandy one; of course, the ideal soil is a deep, strong loam and a sheltered position with an exposure to the morning sun, shaded from the fierce rays of the noonday sun. A stiff clay land can be helped by draining and working in long stable manure, decayed leaves, sand and ashes and a sandy or gravelly earth by the addition of cow manure, clay or stiff loam, but any ground which will grow good cabbage will also grow good roses.

The best season for planting the hardier roses is the late fall, but the more tender teas should be left until early spring. It often happens when you unpack your roses from a distant nursery that you discover the bark all shrivelled; it is a good plan to bury them completely at least six inches below the surface, give the ground a good soaking and leave so for a couple or three days to plump up again. In planting budded, or grafted plants, the point of union should be at least two inches below the surface, so that they may eventually become own root plants. In pruning, first cut out all decayed, crowded or weak growths, then shorten back as required, observing the rule that delicate and weak growers should be pruned severely, and strong and vigorous growers pruned very lightly. The rose chafer is a trou-

WELLESLEY.

blesome pest when he comes, as hand picking and destroying by coal oil, fire, or crushing is the only remedy for him; for other insects a solution of whale oil soap applied with a syringe will prove effectual in ridding the plants.

There are many ways in which roses can be used to produce decorative effects outdoors, as dwarf plants in beds, as climbers on walls, porches or arches, as pillars, in large isolated clumps, as a hedge or dividing line, as an edging to other shrubs, or to carpet banks and slopes.

Take, first, roses as dwarf plants in beds, such varieties as:—Hermosa, Marie Van Houtte, Madame Lambert, La France, Homer, Malmaison, Perle des Jardins, and the old Agrippina are better than the stronger H. P.'s, which are good as masses, such sorts as Baroness Rothschild, Mabel Morrison, Merville de Lyon, Rev. J. B. Cram, Louis Van Houtte, Mdme. Gabriel Luizet, Alfred Colomb, Marshall P. Wilder, Marie Baumann, Margaret Dickson, Gloire de Margottin, Fran-

cois Michelin, Fisher Holmes and Mrs. John Laing being glorious during their flowering season.

The Rugosa hybrids are grand and useful roses for hedges or screens, lovely in foliage, flowers and fruit, and hard as nails in constitution. The Wichuraiana and its hybrids are splendid as edgings and to cover banks or ugly places. The Rambler varieties, with Prairie roses and climbing Hybrid Remontants and Teas, like Rene Marie Henriette, Gloire de Dijon, W. Allen Richardson, Jules Margottin, Glory of Cheshunt, Victor Verdier, Bessie Johnson are magnificent as pillar roses, on arches, walls, or porches. Dean Hole says we should have in our gardens, "Beds of roses, bowers of roses, hedges of roses, pillars of roses, arches of roses, fountains of roses, basket of roses, vistas and alleys of the rose."

OUR COLORED PLATES.

We have a few extra copies of the colored plates sent out with recent issues of HORTICULTURE, any of which will be sent in tubes, post paid, to applicants at ten cents each.

RED AND DARK-RED HYBRID TEAS.

Translated by G. Bleicken.

An article on recent introductions in this class of roses is contributed by Fr. Harms, Hamburg, in Moller's Deutsche Garten-Zietung.

After referring to the two noted roses introduced by Henry Bennett, Wm. Francis Bennett (1885) and the Meteor (1889), Moreau's La France of '89, and others of the same strain, down to Gruss an Teplitz (1898), Lambert's Balduin (1889), Dickson's Liberty (1900) and the 1902 introductions of Paul and Jacob, and the 1903 and 1904 introductions of Hill, the writer comes to the conclusion that "with the introduction of Liberty, Bennett's work has been taken up again," and that the "Hybrid Perpetuals must of necessity give way to the Hybrid Teas in the future."

Of Richmond (Hill, 1905) he says: "Richmond was selected by the raisers as best of its kind among 10,000 seedlings, one of its best qualities of superiority to Liberty being its strong growth. It flowers as freely as Catherine Mermet, the flowers being sufficiently large, well-built and very fragrant, and the foliage noble. How strong a growth the plant is capable of in the open ground, I observed on some grafted stock which I got from my business friends, A. Dickson & Sons (the raisers of Liberty); they made growth in no way inferior to the strongest perpetuals. . . . Not only is Richmond superior to Liberty, but as a matter of fact, it is without doubt

the greatest advancement in this class of roses up to the present date. . . .

HOUSE OF AMERICAN BEAUTY AT SCARBOROUGH, N. Y.

F. R. & P. M. PIERSON ESTABLISHMENT

HILL SEEDLING, A1.

Nevertheless, we should not lose sight of other good introductions of late which deserve honorable mention."

Then follows the description of the other two great rivals of Liberty, namely:

Etoile de France (Pernet-Ducher, 1904), very much liked by European growers, and General MacArthur (Hill, 1905), with descriptions and cultural notes on each.

Other valuable introductions mentioned are:

George Laing Paul (Soupert & Notting, 1904); Gruss an Sangerhausen (Dr. Muller, 1905); Cherry Ripe (Paul & Sons, 1905); Crimson Crown (A. Dickson & Sons, 1905), bearing six to seven flowers on every shoot; J. B. Clark (H. Dickson, 1905); Charles J. Graham (A. Dickson & Sons), certificated by the R. H. Society; Baron v. Pallandt (Welter, 1905); and Grossherzog v. Oldenburg (Welter, 1904).

"Those mentioned are about all the first-class red and dark red Hybrid Teas up to date, but let us hope that more good introductions will soon follow them."

In writing to Advertisers kindly mention HORTICULTURE.

NEWS NOTES.

William Plumb has opened business in New York City as a landscape architect.

E. A. Seidewitz has sold his greenhouses at Arlington, Md., and will build at Mt. Washington.

Richard Nofftz of New Bedford, Mass., is about to open a flower store in the business section of the city.

Eugene Fairbanks has sold his greenhouses and residence at Athol Centre, Mass., to C. H. Smith, who takes possession about May 1.

Ellwanger & Barry of Rochester, N. Y., have been awarded a contract by the Massachusetts Highway Commission for the supplying of 4000 trees, the contract price being \$999.

An overheated pipe extending from the boiler in the greenhouse of K. E. Juul of Elizabeth, N. J., caused a slight blaze on the morning of March 5, but it was extinguished quickly and little damage was done.

The trustees of Pine Banks Park, Malden, Mass., state that 400 pine trees have been killed by the ravages of the brown tail and gypsy moths, and if the remaining trees in the park are to be saved, several thousand dollars must be spent.

In the school of landscape gardening and horticulture for women established at Groton, Mass., by Mrs. Edward Gilchrist, pupils will be taught landscape architecture, floriculture, drawing and garden designs, surveying and engineering, in addition to botany. The course will be two years.

A book on Arboriculture by John P. Brown is in preparation and will soon be published if encouragement is received. It will treat on How to plant and grow a forest; Trees which may

be grown in our generation to a profit; A text book for railway engineers; Economic forestry in all its branches.

Through the recent death of Edwin Gilbert of Georgetown, Connecticut Agricultural College at Storrs comes into possession of his farm of 350 acres and \$60,000. A horticultural building, a range of greenhouses and a modern dairy building are among the immediate necessities of the college and this gift is therefore opportune.

The Canadian Geological Survey report that entire tracts of grand white pine in Temagami region in Ontario are being destroyed in a mysterious way. The leaves of the trees have turned to yellow or to a deep brownish red color. In some cases the entire tree is thus affected, in others the disease appears only in patches. The cause and possible remedy for this attack will be at once investigated.

Arrangements are being made by the agricultural colleges of New Hampshire, Vermont and Massachusetts to equip a railroad train with apparatus and specimens illustrating advanced methods of spraying trees, testing seed, destroying noxious insects, fertilizing fields, etc., for the benefit of the farming and market gardening interests. It will start about April first on a tour of those states, stopping at convenient points for exhibits and lectures. Demonstrators will accompany the train.

The Improvement Society of Helena, Mont., are planning a park which will, if successful, serve as an object lesson in forest planting. Nine hundred acres are set aside for their purpose, 140 of which are covered with young timber, and on 400 more some timber is growing. The remainder will be planted with trees adapted to the semiarid conditions of the country, and later on the trees will be cut for timber. It is estimated that 575,000 trees will be required, and to provide them a special nursery will be started.

CUT FLOWER MARKET REPORTS.

Business in the
ST. PAUL AND Twin Cities is very
MINNEAPOLIS quiet just now, as
it must also be

elsewhere, on account of Lent; however, indications are that the Easter trade will more than make up for what is lost during Lent.

Bulb stock this year is better than ever before. Tulips, hyacinths, narcissi, daffodils and lily of the valley are plentiful and in fine condition, and sell more readily than anything else on the market. Violets have had a very heavy trade and the supply is not yet exhausted. Right here it might be said that Hans Rosacker of Minneapolis carries the banner for the large single violets, the Princess of Wales. The greenhouses of both cities are in good trim and well stocked for Easter. Beside the good supply of roses and carnations, sweet peas, forget-me-nots, mignonette and green stock are coming on nicely. A Japanese holly hock in full bloom attracted considerable attention in the windows of The Rosary, recently. The plant was grown at the Wessling greenhouses, and was the first one of its kind ever seen here. It was a beauty while it lasted, but proved to be very frail and shortlived when taken out of the greenhouse.

The supply of carnations has been a little
LOUISVILLE short the past week;

roses have maintained their standard of excellence, and there have been enough for all demands. Violets and forget-me-nots sold unusually well; mignonette and lily of the valley have a limited call, but there should be improvement in these lines. Tulips, jonquils and other bulbous stock have been equal to the demand.

OBITUARY

George Norman.

A familiar figure at the Royal Horticultural Society's shows has passed away in the person of Mr. George Norman, V. M. H., who for 30 years had held the post of head gardener at Hatfield House, the residence of Lord Salisbury. The post was one of honor and responsibility, for the gardens at Hatfield House are amongst the most famous in Great Britain. More than 200 years ago Pepys described their manifold charms, and earlier still a foreigner who paid a visit there recorded his opinion that in the Hatfield Gardens he had seen one of the most beautiful spots in the world. The celebrated Lime Walk, the Elizabethan Priory garden, the famous mulberry trees planted by King James, and the maze with hedges of yew, are some of the special features which attract the visitor. Some important work has been carried out by Mr. Norman. "My primary aim," he once said, "is to keep up the character of the gardens, making experiments as circumstances require, in accordance with modern developments, but preserving the ancient features in whatever changes are made." In addition to superintending the extensive grounds Mr. Norman was responsible for the extensive decorative work on the occasion of the royal visits to Hatfield House. He was a first-class gardener, with a perennial geniality which endeared him to a wide circle of friends. At the interment, on March 5th, many attended to pay a tribute to his revered memory. W. H. ADSETT.

Henry Knott.

Mr. Henry Knott, whose death occurred at Cape May, N. J., on Tuesday, March 6, had spent nearly all of his life in the business. He established himself in Cape May as a commercial florist in 1876 and by energy and hard work built up a nice business and did much to improve and beautify that celebrated summer resort. He retired from active work eight years ago. Mr. Knott was one of the worthiest and most respected citizens, and during his years of business life made many warm friends. He had been ill only four weeks and his death was as his life, beautiful, calm and peaceful. He was 85 years of age, a native of Ireland. All of his life almost has been spent in the United States. He leaves a daughter and one son, who carries on the business.

James Clark.

James Clark, familiarly known as "Boss" Clark, who for thirty years was an employe of the U. S. Botanic Garden, died at his home at White Oak, Md., on March 8. He was a man

of exceptionally fine character and temperament, numbering among his intimate friends many high in official life at the national capital. Mr. Clark was the hero of the following story published in the Washington Star some twenty years ago:

"In the northern division of the conservatory in the botanic gardens there is growing a fruit tree known to the beathen Chinese as 'Leechee.' Just before the assembling of this Congress, it had a goodly quantity of its curious-looking, very agreeable fruit on it, which was watched with interest by the Highland Scot from the land of Argyle, in whose care it had flourished for many a year. The said Caledonian has all the demure gravity in externals of the great chief himself. Having been taught to articulate in the language of Ossian, and speaking no other till an adult, he has never fairly mastered the language of the Sassanach, but speaks it slowly with a peculiar emphasis. While passing around in the performance of his duties he discov-

THE LATE F. W. RITTER.

See obituary, March 3.

ered two well-dressed men stealing the leeches and eating them. With uplifted hands he exclaimed, 'Gude gracious are ye eating thae poisonous fruit?' In an instant the hands of both were on the place the fruit had gone to. The door being open the race of the pair to Dr. Hickling's, the nearest drug store, there to be relieved, was a rapid one, to say the least. Some delay occurred at the start by one of the outdoor hands ordering them off the grass. Relief could have been obtained easier had they looked over their shoulders and seen the shaking sides of the canny Scot as he watched the race. Sidney Smith might have learned that something less than a surgical operation was necessary to get a joke out of the head of a Scotsman."

J. C. Rennison.

J. C. Rennison died at his home in Sioux City, Ia., on February 24, aged 67 years. His death was the result of a fall on the icy sidewalk which he sustained a week previous, but which had not been regarded as causing any serious injury. Mr. Rennison was a

native of New York State, but has been a resident of Sioux City for 23 years, where he built up a prosperous florist business. He joined the Society of American Florists in 1887 and served as State vice-president for Iowa in 1888 and on the Executive Committee in 1894-5-6. He was a constant attendant on the conventions of the society, where by his congenial and cheerful temperament he made many warm friends.

J. C. Gardiner.

J. C. Gardiner of San Francisco, a veteran of the Civil War, a member of Lincoln Post, G. A. R., of this city and employed as head gardener and landscape chief on the government's Mare Island reservation near the city, and very well known to the trade of San Francisco and universally respected, was suddenly stricken by death on the afternoon of March 4 while in the chaplain's house kneeling at prayer.

Ferdinand Boulon.

Ferdinand Boulon, died at Sea Cliff, N. Y., on March 6, aged 65 years. Mr. Boulon came to this country in 1881 after a thorough training and experience in his native country, France, in all branches of horticultural and landscape work and was accounted one of the best informed gardeners in America. He started the establishment at Sea Cliff twenty years ago and his son has been a partner with him for the past two years.

Henry C. Beebe.

Henry C. Beebe of Middletown, Conn., died at his home on Ferry street on March 6 after a lingering illness. He was 57 years old.

The sorrow that has come to the home of Frank L. Moore, Chatham, N. J., in the sudden death of his oldest son, will call forth sympathy from the trade. The young man was a student in Columbia University, a fine scholar and had a promising future.

Commencing with this issue, our readers will notice the advertisement of the Hart Pioneer Nurseries of Fort Scott, Kas. This is an old established firm, having organized their business in a small way in 1865, until at the present time their nurseries comprise over 600 acres and is one of the largest in the west.

They advertise their stock to be strictly first-class, pure bred in every respect and guaranteed true to name.

All of our readers who contemplate planting Nursery stock of any kind this spring, will do well to drop a card to the above firm, asking for their wholesale catalogue. And you will do us a favor if you will kindly mention the name of this paper in writing to them.

Grafted on Dickson

One of the most careful and experienced rose grafters in this vicinity has commissioned me to dispose of the following small surplus of young grafted roses:

	per 100	per 1000
3000 Maids	\$12.00	\$120.00
3000 Brides	12.00	120.00

Every plant guaranteed perfect and grafted on the genuine Dickson Manetti. I was after some of this party's stock last year but could not get a look in.

DON'T NEGLECT THIS OPPORTUNITY

If you are after \$90 kind this offer will not interest you. This is genuine Dickson and grafted by a master workman.

Also 4000 fine plants of

Chatenay

Own root; grown by John Burton and ready for delivery from now on; \$5.00 per 100; \$45.00 per 1000. These are better than Western stock and worth a great deal more. Chitenay is rapidly growing in favor as a profitable Summer Rose.

CUT FLOWERS

VICTORY

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

CUT FLOWER MARKET REPORTS.

There is little of note to **BOSTON** report on the business situation. Roses are not over-abundant as yet and the market is carrying off all that come in, without any stimulation of reduced rates although the attitude of buyers generally is one of expectancy of lower values. This, conditions do not warrant, thus far. White carnations are being called for in lively fashion. We apprehend this is for the purpose of dyeing green in many cases. It is too bad that the flower trade is so deeply involved in this contemptible fraud on the public and insult to a respectable flower. Lily of the valley is not seen in such superfluous quantity as last week. Narcissi of trumpet varieties, etc., are selling at prices far below the cost of production.

The first few days of the **BUFFALO** past week were very quiet but commencing Thursday business picked up somewhat and a good deal of stock was disposed of. White carnations and Beauties have been scarce although enough to go around. Colored carnations, especially Lawsons, plentiful. The scarcity seems to be about over with roses although not much surplus. The demand has been good on medium stock as a good deal of floral work has been in demand. Bulbous stock seems to be about as plentiful as ever, not moving as fast as should, and at times far below the list price. Violets of good quality are still coming in and prices have lowered as well as on other lines. The market improved greatly on green goods the supply not being as large as usual. Good smilax seems to be scarce.

Business has been **CHICAGO** brighter this week. The more prominent retailers were kept busy buying roses as fast as a shipment would come in. The rose stock with some growers has improved in quality and quantity. No trouble to find carnations. Bulbous stock on the increase, as is also the Harrisii lily which is heralding the approach of Easter, and awakening those who have not placed their orders. Violets can be found without exertion. Lily of the valley has dropped off a little in quality. Beauties are still lagging behind; several Beauty growers have not succeeded with their plants this season.

We have had a much **COLUMBUS** better market the past week than for some time. Retail prices have given way somewhat on account of the large quantities of stock being forced on the market; but so have wholesale rates. The cheering feature has been that it

has all been worked off pretty well. Carnations have been in enormous supply almost a glut at times. The city is full of flower fakirs that have knifed everything they could get hold of in the cut flower line. Weather decidedly Marchy; rain, snow, hail, sunshine, and wind, all in one day sometimes. Easter stock looking remarkably well.

Conditions locally are **DETROIT** still favorable, everybody busy and stock selling rapidly. There is a rather scant supply especially of white carnations. Roses are also below requirements but violets are abundant. Snapdragons of high quality are in and bring a high price. Lily plants are plentiful but meeting a slow sale. All plants of the season are available in quantity for every need.

There was not much improvement in the **PHILADELPHIA** market here last week. Carnations and roses were both very plentiful and the main efforts of the distributing centers were aimed at moving the surplus. An immense stock of all kinds had to go to the street men. Beauties were more plentiful, especially in shorts and mediums. As has been the case for the past few weeks Brides go better than Bridesmaids, but both are ahead of demand. Killarney moved off surprisingly well, considering the slow market. Some very good Richmonds are coming in, which find ready takers. Liberties as a rule are short, although a few growers are sending in some nice stock. In the carnation market Enchantress is still the leader. Flamingo leads among the reds. Lawson has the market to itself in the medium class. Lady Bountiful is up front in the white fancies. Its keeping qualities have been misrepresented somewhat. It is above par in that respect. Being somewhat soft in texture it is apt to bruise a little, but that is its only fault. My Maryland as grown around here shows up well. Daffodils are moving nicely, but tulips are a glut. Roman hyacinths and paper white Narcissi are plentiful but find a fair and steady market. Gardenias are down to \$25 and shorts can be got in quantity at \$10 per 100. White lilac nearly over, but enough for the demand. Violets are moving rather better than usual for this season. Orchids are scarce, Dendrobium nobile and Coeloglyne being about the only ones around.

The tendency of this **NEW YORK** market is toward lower prices, but prices have thus far receded gradually, not because

of any substantial increase in supplies, but on account of a halt in demand. In the rose line, American Beauties are now obtainable at prices that are considerably under last week's quotations. The price of the roses has been maintained at 75c. and \$1.00 for a longer period than the records show for many years. Richmond has won the favor of flower buyers, and its reception is most encouraging to those who intend to handle it next year. With its repeated free blooming qualities it should prove to be a paying proposition. The bloomers have been in steady demand this season, and it is only now that there seems to be more to distribute among the buyers. The extra and fancy grades of Brides and Bridesmaids have not moved so freely as heretofore, which is a reflection of the condition of business. Among the novelties, Chatenay, Uncle John and Killarney have found followers who have been willing to absorb the supply at good figures. All of these, however, feel the present depression and are offered at lower prices. The quotations on carnations and violets are not materially changed. Lilacs are cheaper. With a smaller quantity of tulips and daffodils there is a possibility of better averages on some varieties. Cattleyas hold up to quoted prices, and are not plentiful. Demand and supply is even as regards smilax and asparagus.

American Beauty is the **SAN FRANCISCO** only exception noted by florists in speaking of the abundance of flowers. Although California beats the world for divorce decrees, and pity it is that no flowers are used at these supposedly happy events, the weekly crop of San Francisco's marriagable maidens is like the current over-supply of violets, and the weddings of the past week have been a source of good business to florists. The few indifferent American Beauties that did arrive passed readily to consumers, and Brides, Bridesmaid and Liberty, not prime stock but in good supply, sold freely, for the week's demand for every blooming thing was exceptionally good. Every other floral species is in perfect form and sold satisfactorily, especially Hannah Hobart, Enchantress and Mrs. T. W. Lawson carnations. One big down-town store showed me its orchid sales for the week, which averaged upward of fifty orchids per day at one dollar each. Bulbous stock, including tulips, lilies, Paper White narcissus, hyacinths, callas, daffodils and freesias scored well. The week's business was better than usual and altogether pleasing.

PHILADELPHIA NOTES.

C. H. Grakelow of the Depot Floral Exchange was thrown from a trolley car on the 10th inst. and severely injured.

An English nurseryman is offering in this market erica sprays by the pound. The variety is Erica Mediteranea hybrida and the price five shillings per pound, post free.

The Florists Gun Club of Philadelphia will entertain the Allentown Gun Club March 27. The shoot will be at Wissinoming, followed in the evening by a banquet in the city. Covers will be laid for 50.

Have you read Robert Craig's digest of the carnation past and present? If not you have missed a fine essay. See HORTICULTURE, page 253, March 3. For a judicious marshalling of the facts and an unbiased summing up of the situation, commend me to this gem of Robert Craig's. It ought to please even the fastidious soul of Willis N. Rudd.

Jno. McIntyre, late with Battles and Habermehl, is now with the Leo Niessen Co., having entered on his new duties on the 12th inst.

Among our visitors this week were Phil. Breitmeyer of Detroit, Mich.; Mr. Keller of J. B. Keller & Sons, and Mr. Salter of Salter Bros., Rochester, N. Y.

The report that Messrs. Davis and Wilson had bought out the Poryzees' place seems to have been premature. Negotiations were under way and a deposit made, but it now appears there was some fall down in arranging the details. At last accounts Mr. Poryzees was still in possession.

Jno. Westcott, resplendent in a white vest with pink dots, a green tie, and seersucker pants, arrived from his southern trip on the 11th inst. Mr. Westcott says that everybody who can afford it ought to go to Palm Beach, Fla., every winter and see the bougainvilleas, the crotons, the vincas (and all the things we have such trouble with) growing wild and blooming profusely.

A FLORIST'S WINDOW IN WINTER.

A window in a city street,
With thousands daily passing by;
With buds and blooms of flowers replete,

Born 'neath a glorious summer sky.
Within are roses blushing red,
That on the air their sweets exhale;
Pinks, borne from out their natal bed,
And vines that near them lightly trail.

Chrysanthemums and asters bright,
And modest violets profuse;
Tall, leaning lilies, pure and white,
And pansies gay with varied hues.
And there are others just as fair,
Whose beauties would our praises win,

That toss sweet fragrance on the air,
And seem to beckon us, "Come in!"
—Thomas F. Porter, in Boston Globe.

SEED TRADE TOPICS

SEEDSMEN AT WASHINGTON.

A representative delegation of eastern seedsmen responded to a hurry call to Washington on the "free seed" matter, March 6. Among those who attended were: W. Atlee Burpee, William Henry Maule, and Walter P. Stokes, of Philadelphia; J. Forbes and Patrick O'Mara, New York; John Fottler, Boston; F. W. Boigiano, Washington; T. W. Wood, Richmond, and Albert McCullough, Cincinnati.

In their conferences with the powers that be, the delegation was joined and ably seconded by Mr. Eger, head of the Maryland State Grange, who introduced the resolution condemning free seeds at the National Grange convention at Portland, Oregon, which was passed unanimously. Professor Massey also joined the delegation.

Mr. Burpee was interviewed on his return, and stated that he was confident much good had been accomplished by the visit. The interests most concerned had made themselves felt at the psychological moment, and they are hopeful that at last the consciences of the national lawgivers have become awakened to the iniquity and injustice of this hoary abuse, and that when the committee's report comes before the house the appropriation will be abolished. Mr. Burpee was very appreciative of the valuable assistance of Mr. Eger, who, as representing a large body, consisting of over 800,000 farmers, had considerable influence with such congressmen as imagine that the farmer vote can be influenced by this species of petty bribery.

The delegation also took occasion to point out to the Secretary of Agriculture and others the great injustice of the present method of publishing the names of respectable houses in the seed trade on the alleged plea that they had been selling adulterated seeds. Much damage had been wantonly done to men of the highest reputation, without a shadow of excuse. Mr. Wilson received the delegation very courteously and promised to do everything in his power to so interpret and execute the law as it stands as to do the least possible injury to honorable houses and to touch only such men as are guilty of something wrong and to first give every one the right to defend his reputation before the proper tribunals (guaranteed to every citizen by the Constitution) before publishing him to the world as a criminal. The Department of Agriculture is not a court of justice, and to institute a Spanish Inquisition of this kind, where the defendant is given no opportunity to put up a defence, is to carry a free people back into the inferno of the middle ages, abolish Magna Charta, the Bill of Rights, the Declaration of Independence, and the Constitution of the United States. It is no wonder the seed trade of the country are indignant; the wonder is that they are not more red-hot than they are! They ought to take the matter to the Supreme Court as the resolution of Congress governing the matter is clearly unconstitutional. To sit tamely un-

der such a rank injustice would be to confess themselves mice and not men.

G. C. WATSON.

"WANTING THE PIE AND THE PENNY, TOO."

On a recent occasion when Howard Earl of Burpee's, Philadelphia, was entertaining a few congenial friends in the seed trade, he touched upon a pertinent topic when he said: "Gentlemen, we want no surplus seeds thrown on the market after your seed growers and farmers have filled your contracts with us and got your money. The trouble with you people is, that you want your pie and your penny, too."

The seedsmen really have a right to be warm on this contract seed subject, and the farmers will be wise if they pattern themselves on the square deal plan of such men as Keeney and Grinnell, and refrain from trying to work things like Uncle Rastus's coon trap, which caught 'em coming and caught 'em going too! That sort of thing may work all right for the time being; but it will surely be a boomerang in the end. If one be a contract grower, let him stick to that. It is the only safe plan. Besides, it's the only square plan, and that's the most important feature of all human intercourse and the only one that will make for an enduring success. Have not the much-abused seedsmen enough to stagger under with the free seed question, the warranty, the inquisition, and the Other Fellow, without this other addition to their troubles? I trow yes!

G. C. W.

TO NURSERYMEN, PLANT GROWERS AND SEEDSMEN.

The executive committee of the Society of American Florists and Ornamental Horticulturists has arranged for an outdoor trade display in connection with the annual convention to be held in Dayton, Ohio, next August. The pavilion in which the meetings and customary trade exhibit will be held is advantageously situated in a large fair ground which is well adapted for outdoor planting. Plans and diagrams are being prepared and will shortly be distributed. In the meantime, the secretary would like to hear from parties who are disposed to take advantage of this excellent opportunity to make a display of hardy or tender material in a community widely interested in the subject of garden adornment. Applications are already in hand for large spaces for the exhibition of cannas, Baby Rambler roses, phloxes, asters, hydrangeas, tuberous begonias, altheas and fancy conifers. As the time is short for the preparation of the ground and planting, a prompt response to this announcement is urged. Information sheets and entry blanks will soon be ready. Address William J. Stewart, Secretary, 11 Hamilton Place, Boston.

The Bromfield-Colvin-Ries Co. has been incorporated at Bay City, Mich. President, A. T. Colvin; vice-president and treasurer, J. F. Bromfield; secretary, F. J. Ries.

PHILADELPHIA SEED NOTES.

Signs that spring has opened up earlier than usual this year are plentiful around Dreer's, Johnson & Stokes' and Michell's. All report an unusually early demand. The latter firm reports overtime even with the eleven extra hands as against last year. Philip Freud, the window artist for the Michell firm, has been particularly busy in the window display for the spring opening (St. Patrick's day), combining sentiment and business very effectively. Shamrocks, sweet peas and lawn grass are the groundwork for this artistic appeal.

CATALOGUES RECEIVED.

C. S. Harrison, York, Neb. List of paeonies and perennials.

Thaddeus N. Yates & Co., Philadelphia. Trade list of trees, shrubs and vines for spring, 1906.

Imperial Seed and Plant Co., Baltimore, Md. Trade price list of cannas and hardy herbaceous plants.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks, from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

F. R. PIERSON CO.,

Chicago Carnation Co. James Hartshorne, Mgr. Joliet, Ill.

Some People have taken our advice as published in these columns recently and are buying My Maryland

ly and are buying for trial. We reiterate here—it it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C., \$2.50 per doz., \$12.00 per 100; \$100.00 per 1000. Pot plants, \$3.00 per 100 extra.

Send for our catalog, now ready.

WM. SIM, Cliftondale, Mass.

Why not ask for a free five pound trial sample? It is convenient, it only costs you the express charge. It's no new fangled thing, hundreds write of it like Mr. Wm. Sim. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STOOTHOFF CO. MEANS, 114 West Street, New York City, N. Y.

WANTS

Advertisements in this column one cent a word. Initials count as words. Cash with order.

TO LEASE FOR A TERM OF YEARS my greenhouses consisting of about eighteen thousand feet of glass, all Hitchings & Co. boilers, and four of the houses are also Hitchings & Co.'s construction; city water on premises, two trolley lines one block, and railroad station two blocks from the premises; three miles from 34th St. ferry. Geographically they are in the centre of Greater New York. If you want a place this is a rare chance, so do not write but come see it, possession June 1st, 1906. Apply to Alex S. Burns, 128 4th St., Wood Side, Queens Borough, N. Y.

WANTED BY APRIL 1ST—A FOREMAN on a large commercial place. A position is offered to an honest, sober, intelligent man. One who is familiar with Greenhouse and Outside plants, who is able to handle men to good advantage. To such a man is offered a permanent position with good salary. Give full particulars in first letter. Address Plants, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Man to take care of conservatory; one who has knowledge of spring planting and knows how to do trimming. Address Spring, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED.—I would like to place my son, age 19 years in a good private or commercial establishment. He has some knowledge of the business. Thomas Heskey, gardener to Lt. Gov. E. S. Draper, Hopedale, Mass.

WANTED—First-class man to take charge of a city flower store in fashionable district. One capable of making fine table decorations and waiting on critical customers. Salary \$20 per week to right man. T. W., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—A first-class Fern Grower, one who has had experience. Good wages, steady position. Send references. R. H. N., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—To lease or buy, a place with 15,000 or 20,000 ft. of glass, in good location, vicinity of Boston, suitable for raising roses and carnations. R. D., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—For a large private place, a first-class man as Inside Foreman. Must have European experience in some of the best places. Apply, with copies of testimonials, to H. W., care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Position as Head Gardener. English, age 24, single, good experience, outside and under glass, good references, disengaged April 1st. H. Gant, Dalton, Mass.

FOR SALE.

Greenhouse and vegetable business, carried on for ten years. About 5000 feet of glass, two new houses, two old; new dwelling house and barn; 30 acres of land. Walter Slade, Box 394, Franklin, Mass.

FOR SALE—Two greenhouses, 23x95, 20x68, with hot water heating apparatus and well stocked with Carnations and Violets. Will sell as it is with dwelling house attached and 17,000 feet of land, or to be taken down and removed. Address 703 Chestnut St., Waban, Mass.

CALIFORNIA NOTES.

The first strawberries for the season arrived in San Francisco March 7 from Los Angeles—a crate of 30 double handful baskets of large, well-formed berries that sold at 35 and 40 cents.

The California Promotion Committee, an offshoot from the State Board of Trade, has proved of valuable service to the commonwealth during the past six years of its existence. It is sustained by all the big industrial houses and wealthy men of the state by annual subscriptions, payable in monthly installments, and the growers' and florists' contribution amounts to several hundred dollars per annum. Just now this state committee has the Balboa Exposition in hand. This is a World's Fair scheme, planned to take place in celebration of the discovery of the Pacific ocean by Balboa and also the opening of the Panama canal. The date fixed for the opening of the exposition in San Francisco is 1913, and the managers in charge are anxious that all correspondents of trade papers assist the enterprise with notices. Last week Congressman Kahn introduced a bill in Congress to appropriate for the exposition \$5,000,000 conditionally upon the raising of a like amount by California.

FIRE RECORD.

A fire at the Charles Cummings' place, Woburn, Mass., on the morning of March 9, did serious damage to the glass in the 10 greenhouses adjacent to the barn, in which the fire started. The loss is reported to be \$10,000; partially insured.

A building used for the storage of moulds, garden vases and boxes, at the factory of the A. H. Hews Pottery Company, North Cambridge, Mass., was completely destroyed on the afternoon of March 10. Fifty tons of hay were included in the loss, which was estimated at \$8000. The fire is believed to have been of incendiary origin.

Green's Nursery Co., Rochester, N. Y., lost nearly \$10,000 by a fire on March 8, which originated in the basement and spread through the building with such rapidity that little could be saved. The orders of the firm for the spring and summer trade were completely destroyed. The building was insured and it is said it will be rebuilt.

BUILDING A GREENHOUSE

is not a task for a mere carpenter. It's a thing that requires years of experience—the knowledge of materials—of requirements. We have that knowledge, we know the requirements.

HITCHINGS & COMPANY
Greenhouse Builders and Designers
1170 BROADWAY, NEW YORK

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

This is the Latest Cut Flower House

(Order taken last January)

This is quick work and goes to show it's not an all season's matter for us to erect an iron frame house

THIS is a fine example of our iron frame construction, standing perfectly rigid and fully self sustaining. This house is 45 feet 6 inches wide and about 300 feet long, and is being erected for the Cottage Gardens Company, the famous carnation growers. They intend it solely for seedlings.

The benches used by Mr. Ward are 3 feet 6 inches wide and the house is built to accommodate 8 of them. That's a tremendous span—46 feet for a rafter only 3 inches deep and 5-8 inches thick, but it's possible for these reasons: The way we tie these houses together; the extra bracing and rigidity given by the sash bar clasps, bolted to the galvanized angle iron eave plate; the ridge bracket binding together the rafters and bolted to the ridge; the use of the small purlins at frequent intervals, really plotting the frame work out in squares of bracings, while making possible the use of the smallest sash bar made.

Such a house is a revelation in its lightness and is practically indestructible. The repairing of a sash bar is as easy as replacing a shingle on a roof. The iron frame house is the house of the future. All over the country the growers are beginning to use it. The economy of the large house is long since a settled matter. It now settles down to the pure matter of economics; the question of 25 per cent. less fuel expense, the larger volume of air as a protection against sudden changes of temperature and the item of decreased repairs.

Select List of Hybrid Perpetual and other ROSES

FOR OUTDOOR PLANTING

We make a specialty of preparing Roses for outdoor planting, our stock is all field grown, either American or imported from England or Ireland. The plants (unless otherwise specified), have all during the winter months been potted up into 5 or 6 inch pots according to the growth of the variety, they have been stored in cold houses where they will break away naturally making it the best possible stock for you to sell to your retail customers.

Coniferous Trees and Shrubs in England and Scotland

While in England and Scotland last summer I visited many fine gardens noted for coniferous trees and shrubs. We have a grand collection of these at Wellesley, and my object was to compare specimens. I had with me a list of what we have, their height, spread and girth, so that I was in a good position to judge. Conifers, as a rule, do poorly near cities, still I was not prepared for the disappointment I met at Kew. It was only among yews, and their allies, the torreyas, and allied South American coniferæ, and pines that I found presentable specimens. Nowhere near London did I see anything striking. One has to get about twenty miles out. On the Lincolnshire wolds, at Sir Barclay Sheffield's place, I saw the finest specimen of *Thuja gigantia* anywhere. It was very regular in outline, pyramidal, and nearly sixty feet high. There was also a very ordinary specimen of our common white pine. Whether it is scarce in Britain I do not know, only I did not happen to see any good ones. Our white pine is, in my opinion, the handsomest of all northern pines.

Through the kindness of Messrs. Veitch I had introductions to the superintendents of some of the finest estates in Scotland. I took in the old city of York on my way, and the famous Backhouse nurseries. I had visited the nurseries some twenty-five years before, but since then the city of York has, like the rest of England, become a manufacturing centre, and so spread out as to almost take in the old nursery. The bad effects of soot were everywhere visible. Messrs. Backhouse are moving farther into the country. I took some notes, and may refer to it later.

I visited Hassledon Hall, in the vicinity of York, famous for its Italian garden, which is made up, almost wholly of clipped English yews. It had a massive and imposing effect, and this is all I can say about it. I arrived in Edinboro in time to see the great summer exhibition. It was the finest show I have ever seen anywhere. The indoor and outdoor fruit entries were especially well filled. I took copious notes and may at another time refer to them.

I went to Dalkeith Palace next, but did not see anything in my line very striking. There was a fine lot of fruit houses, and an excellent vegetable garden, clean and well kept. I was introduced to a poor specimen of *Torreya nucifera*, which was expected to stick me, as it was not labelled. It is said to be tender. We have fine healthy specimens of it at Wellesley.

Oxenford Castle was next visited. I shall always remember it with pleasure, as here I received the kindest treatment from both Mr. and Mrs. Smith, gardener and his wife—an unusual experience in my travels; with this exception, I cannot say much for the hospitality of the craft. The collection of evergreens was small, and evidently not specially cared for, with the exception of a few specimens of *Cupressus Lawsoniana*, *Libocedrus decurrens*, and *Thuyopsis borealis*, which

ABIES NORDMANNIANA.

were given a chance to show their beauty. For the rest, they might grow together, and spoil each other or be backed by deciduous trees, and so become one-sided. I would not mind this—this grouping for effect—if in some part of the grounds, specimens had been given a chance to develop their full beauty.

I went to Perth and to Scone Palace, noted as being the place where David Douglas served his apprenticeship, and there are two magnificent specimens of the Douglas spruce which he planted. Scone was the only place I visited that gave special attention to specimen coniferæ. I did not think, however, the plan adopted here a satisfactory one; it was anything but effective. A flat square two to three acres in extent was given up to specimens, massed in on three sides by forest trees, and on the other the greenhouses and vegetable garden. They were planted in lines, just as if they wished to have them convenient, and handy to look at as individuals. There were fine specimens of *Picea Sitchensis*, *Abies Nordmanniana*, *P. excelsa*, *Abies Cephalonica*, *Pseudotsuga Douglasii*, *Abies pectinata*, *A. grandis*, *A. nobilis*, *Thuyopsis borealis*, *Cupressus macrocarpa*, *Tsuga Albertiana*, *Thuja gigantea*, *Pinus monticola* and *Abies Pinsapo*. Our American concolor firs, Colorado Blue spruce and nearly all the Japan firs and spruces did very poorly. After seeing such fine speci-

mens of the others I was surprised at the failure of these, and I found it so everywhere.

There were magnificent specimens of the Californian redwood, *Sequoia Wellingtonia* and *S. sempervirens*, but these are out of the question with us. They will not live at Wellesley.

Ochtertyre, Crieff (Scotland), was next visited. This was the most beautifully situated of all the places I saw. It pained me to see the place neglected. This used to be a noted place, but lack of money and worse—lack of interest—gives it a deserted look. The walk along the mountain side one lovely sunshiny day was enchanting, and although I saw practically nothing of the place, I was well repaid by the scenery. The roadside above me was plentifully planted with Norway spruce, Douglas firs, Nordmann firs, *Abies nobilis*, and *Abies grandis*. They were magnificent in size but, closely planted, had lost their beauty. It must be massive and imposing to look from the opposite hillside, with water, waterfowl, and an old water mill between—an artist's dream. Below me, far below, I could look over the tops of the largest of them—some over a hundred feet high—large specimens of Douglas firs, Nordmann's, and Norway spruces, crowded and neglected with no more right to grow than the meanest forest tree.

Drummond Castle next, and this was a surprise. We drove for three miles through a beautiful avenue of beeches, which made what appeared at a distant view, and only, and always in the distance—a continual arch. Going round the old castle to the courtyard I met a piper, who in a mixture of Gaelic and broad Scotch, tried to direct me to the greenhouses, where I should find the gardener. The difficulty was overcome by the gardener coming into view. The surprise was the Italian garden—it is really a combination of Dutch and Italian statuary and pattern flower beds mixed. The flower beds are in regular and corresponding designs and in solid colors, for distant effect. It is best seen from the courtyard as a whole. The effect is almost lost when walking through it.

Going up to Murthly Castle is an avenue of *Abies nobilis*. It is perfectly straight and about a mile long. The trees are young yet, but if they are well taken care of, and attain the dimensions of others seen—over 100 feet high—the effect should be wonderful in 30 years time. Change of ownership, or rather a succession of heirs affects large places like Murthly. We find part of one plan not finished, and other ideas commenced and not carried out, so we come across a planting here and there, with no semblance of order. There is a short avenue of *Abies grandis* which well bears out the name, but why it is there, one cannot see. Another of *Araucaria imbricata* also without any reason; still another of *Wellingtonia gigantea*, shut in across one end by a row of beautiful specimens of *Tsuga Pattoniana*. *Araucaria imbricata* and *Wellingtonia gigantea* were both disappointing. They were rather new things when I left home 23 years ago, and much was expected of them. As trees, they are short-lived or, to say the most, become untidy and straggling, before reaching maturity. *Tsuga Albertiana* here takes the place of our native hemlock; I would defy anyone to tell the difference looking at them. There must be physiological differences, not visible, for the tree is not hardy in the eastern states. There were two trees of our native hemlock on the place, and asking what the difference was, as they observed them, was told that *T. Albertiana* never branched, whereas *T. canadensis* almost always did. *Tsuga Pattoniana* which we have

only as a small tree, being somewhat new to us, is here a very handsome tree. Its "outstretched arms" or main branches covered with pendant secondary ones, much in the way frequently seen on Norway spruce, made a lovely picture. The Douglas spruce, the Norway, Nordmann's fir, the balsam and silver firs do exceedingly well and many specimens are over 100 feet high. The Japan firs and spruces and also our Rocky Mountain kinds do not thrive satisfactorily.

In all the places I visited put together I did not see as many species and varieties of coniferous trees as at Wellesley, nor as fine specimens.

J. D. Hatfield

Mechanical Watering

"Aye free aff han' your story tell
When wi' a bosom crony,
But still keep something to yoursel',
Ye scarcely tell to ony.
Conceal yoursel' as weel's ye can,
Frae critical dissection,
But keek thro' every ither man
Wi' sharpen'd sly inspection."

Mr. Louis Wittbold must surely have read the above lines and kept it in his mind when delivering his paper before the Detroit Florists' Club. The readers of HORTICULTURE are probably as wise after reading his remarks as they were before. Before reading the article I expected I was going to get some insight into the workings of the mechanical watering machine. How lovely it looks on paper! Theory may be all right in mechanical greenhouse watering but when put in practice "It's all bosh." Sometimes a man on the end of a hose is a dangerous thing; would the mechanical man be sensitive enough to find out dry spots and see red spider? What a dream.

A mechanical watering and syringing apparatus was used in an adjoining town here, many years ago and I think the proprietor went out of business. Outside watering can be accomplished successfully by mechanical means, but inside—never. A few years ago there was a craze for having cement benches built to hold water, stretching chicken wire over them, having moss laid on the wire before putting in the soil, then planting carnations. How many of them are in use today? Certainly we are in a progressive age but at some things our progress halts. I quote one of his (Mr. Wittbold's) paragraphs: "Looking back at our predecessors we smile and pat each other on the back and feel our superiority to such a degree that we generally find it necessary to go out and buy a size larger hat." Some of the old fellows who have passed to the great beyond have given us points which we are using today, having discarded them in our haste for something new and, finding the latter all wrong in practice, have gone back to the old ways. Steam boilers and mechanical stokers are a great improvement over the old flues, but until we get a mechanical waterer with gray matter enough to work right let us hang on to the watering can and the hose.

I think if "Job" has any medals left he should send one out to Chicago by registered mail.

Robert M. Brown

PINUS AUSTRIACA.

Symbiosis and its Relation to Horticulture

In these days of horticultural advance we hear much of the sterilization of soil and fighting the fungus diseases in general, and but little of symbiosis, which is the association of two organisms which live together in intimate connection, both contributing to their mutual welfare. Greater interest should be given this subject, and evidence should be advanced toward the possible advantage of using the principle in horticultural methods. We unconsciously take advantage of the method when we transplant evergreens with balls of earth and find greater success attending this method than where the roots are not accompanied with soil, or become subject to even slight drying influences. There are some curious seeming contradictions which, however, are doubtless to be explained away as we learn more of the subject.

In a nutshell the principle is that of the natural replacement of the ordinary nutriment and moisture-absorbing root cap of green leaved plants with the mycelium of certain species of fungi who in return for absorbing from the soil the principals of moisture and nourishment and turning these ingredients over to the green leaved plant, are supplied in exchange with certain principals of nourishment from the sap of the plant itself. All of the blue berries, heaths, rhododendrons, daphnes, empetrums, gerestas, a great number of conifers, seemingly the entire oak family and numerous willows and poplars, we know to be dependent for nutrition on the assistance of various fungi, though the full life history and identification of the species of these fungi is yet to be determined.

As regards the oaks and poplars, all the roots of these genera are completely surrounded by the matted mycelium growth of certain types of fungus and so closely woven is this covering that there is no well defined line of demarkation between this and the adjoining layers of purely natural growth. Through this matted fungoid area are minute absorptive or feeding cells which perfectly replace root hairs in their peculiar function. Furthermore there is a distinct interchange of fluids between this mycelium and the true hard wooded plants. Under such circumstances it is not a difficult matter to account for the comparative ease in transplanting oaks and poplars because of their wide distribution whereby it is difficult indeed to find areas that are not thoroughly impregnated with spores of the necessary fungoid associates, and provided every protection and moisture are supplied during digging and transportation. The beech, however, is a less cosmopolitan tree and with but few specific forms, showing a greater dependence on the exercise of care in keeping the roots moist during transportation as well as so far as possible seeing to it that there is a fair degree of soil attached to the roots during the transplanting process. A failure to observe these requirements always results in disappointment to the planter except in occasional cases where by chance the

tree is placed in a situation that has already become impregnated with the desired fungoid mycelium.

Many, if not all, of the conifers are dependent largely upon this means of obtaining nutriment, and in this family the mycelium growth is frequently quite conspicuous. Evergreens provided with balls of earth in which they have naturally grown suffer least loss in transplanting. In this we get a world of suggestion as to why certain plants can only be moved with difficulty wherever the roots lose all of the attached soil or suffer in the least from drying influences. We can also understand from this why rhododendrons fail to succeed in limestone soils when we know the inveterate antipathy of limestone to fungi in general; we understand why leaf mold is to a certain extent indispensable to the cultivation of these plants that the necessary source of fungoid growth may be present and as well the need of good balls of earth in transplanting with the plants themselves in order that the fungus in its living and vigorous form may accompany the plant in its travels. It seems that while the first roots of seedlings or cuttings are provided with the usual root cap, the vigorous and healthy future growth of the plant is dependent on the combination of two seemingly distinct forms of vegetable life.

While the above facts may not be generally known yet they are not unparalleled in the vegetable kingdom, for lichens as a class are absolutely dependent on the association of two distinct vegetable divisions, that is, the algæ and the fungi, wherein each is in the closest association and dependence on the other for their respective vegetative requirements, this partnership extending even to the spores. On the other hand we have ample evidence of late of the importance of certain low forms of animal or bacteria life to the healthy growth of such leguminous crops as alfalfa and clover, though the efforts towards an artificial dissemination of this through the so called bacteria cultures have not been crowned as yet with unqualified success.

The point that I am seeking then to bring out is that of giving the importance of the principle of symbiosis careful thought and the danger that may result from destroying fungoid types which may be beneficial and which if destroyed by soil sterilization may be to the detriment of certain classes of plants which depend on them for existence. Soil sterilization undoubtedly is of the highest value in connection with the cultivation of many green house crops, such as the carnations, the rose family in general, as well as many vegetables, but we get from this a hint that it may be an evil when practiced with certain classes of plants whose absolute existence is dependent on the assistance of fungi in their healthy growth.

J. Woodward Manning

Cerasus Japonica pendula rosea.

The spring is coming and the time of planting is near. Among the most beautiful trees and shrubs are the various species and varieties of *Prunus*. Nothing can be more beautiful and graceful than those delicate blossoms. Volumes might be written of them. No gardens of any size should be without some form of these most beautiful plants. Some are fitted for the lawns, others for general decorative purposes. One of the most beautiful, especially for the lawn, is *Prunus pendula*, known in the garden catalogues as *Prunus cerasus pendula rosea*, in this country a beautiful small tree of pendulous habit with flowers of several shades of color from nearly pure white to deep rose, usually growing from 10 to 12 feet high, with long, feathery branches drooping to the ground and covered with thousands of delicate single flowers presenting a most fairy-like appearance. It is said to be a native of China and one that is most favored in the festivals of the cherry blossoms. During the season of the cherry blossom thousands in Japan make a holiday to go to these gardens while the cherries are in bloom.

Prof. Sargent while in Japan saw specimens of these trees from 50 to 60 feet in height in old temple gardens in many cities of Hondo with wide spreading fountain-like heads, but did not see them in the wild state. *Prunus subhirtella* which we have from the wild state near Tokio in Japan is classed by some botanists as of the species. It is certainly nearly related, and while not of the same habit of growth the fruit and flowers are similar and with the same profusion of bloom, but more dense and upright in its habit.

Prunus pendula rosea or *Japonica pendula rosea*

comes true from seed and makes a more erect pendulous tree than when grafted on the common English Mazard cherry. The tree is perfectly hardy in the vicinity of Boston where many fine specimens can be seen. The introduction of this plant in New England I think is due to the Holland Nurseries around Boskoop about 28 years ago.

WM. J. STEWART, Editor and Manager.

What the
Rose Number did

How did our Rose Edition of last week strike you? As soon as that splendid colored rose supplement made its appearance HORTICULTURE's subscription list began to feel the momentum. The relationship of that single issue with its forty-eight pages of valuable reading matter and equally interesting advertising, to the cost of a year's subscription to HORTICULTURE, is worth taking into consideration, is it not?

Better protection
for the trees

We are simply delighted to read of the frequent instances in various parts of the country where electric light companies, trolley and gas light concerns have been brought to justice and compelled to pay substantial damages for injury to the wayside trees. The sentiment in favor of better protection to trees on the public highways is rapidly growing and soon the butcherings done with impunity in recent years will be impossible of repetition.

Dayton's out-
door exhibition

We would refer again to the proposed out-door exhibition in connection with the S. A. F. convention at Dayton next August. The advanced sentiment in Dayton as regards home adornment will do much to make this a profitable venture in a fruitful field for the dealer in ornamental nursery stock and hardy garden material. We learn that already civic pride has been stimulated by the announcement of the plans of the society and that the people of Dayton are preparing to take a hand themselves and it begins to look as though the exhibiting will be by no means one-sided. It behooves the progressive nursery man to take advantage of the opportunity.

Boston greets
the rosarians

As we go to press with this issue Boston visitors are arriving and the hustle and bustle of unpacking and staging the most ambitious rose show ever attempted in this country is on. It is an event to

which the horticultural fraternity of the Hub have been looking forward with intense interest and everything has been done that could be done in the way of preparation by willing hands spurred on by willing hearts. It may be many years before the Boston fraternity shall again have the honor and pleasure of entertaining the American Rose Society. Wherever it may go in its wanderings it can feel assured of the hearty good-will of the Boston rose lovers whose loyalty to the Queen of Flowers has been newly awakened by these visits of the brethren and to whom it is fondly hoped has been communicated in these delightful events some measure of that inspiration which makes for enthusiasm and uninterrupted success.

Opportunities in
landscape work

The ornamental treatment of public and private grounds is a subject of rapidly growing importance not only in the older-settled sections of our country but also in the newer communities where we have become accustomed to look upon these more refined accessories to human existence as of minor interest. No more tempting outlook exists for the young man with the proper artistic temperament than is offered in the landscape gardening possibilities of the immediate future. There is abundant room for hundreds of such to attain emolument and honor in this delightful pursuit. Let it be fully realized, however, that the taking of a couple of years' course in a college and hanging out of a shingle will never, in itself, make a man a success in landscape work. The Downings and the Olmsteads of the future will, no doubt, have all that, but they must have much more besides.

The florists'
interest in
hardy material

We have devoted a large part of this issue of HORTICULTURE to topics associated with out-door decorative planting. There is a growing appreciation of hardy material on the part of the public and that department of the gardeners' avocation is rapidly gaining the ascendancy, as it should; not that the soft-wooded material so long favored is to be abandoned in garden work but that it is to be used with better judgment and in its proper relation to other things much better adapted in many ways for certain desired effects. The judicious floriculturist will take note of these tendencies of the times and prepare himself to take advantage of business conditions as they develop on these advanced lines. The only sufferers in such periods of transition are those who stand still and find fault instead of grasping the opportunity. A good selection of the choicer sorts of hardy shrubs and herbaceous perennials, also ornamental lawn and street trees, should be a part of the stock of every local florist who has or can secure the land necessary for their cultivation. They will sell as fast as they can be produced, for some time to come and, in addition, there is the by-product of flowers which can usually be turned to good profit.

INSTRUCTION IN LANDSCAPE WORK.

Amherst, Mass., March 5, 1906.

Editor of HORTICULTURE:

Dear Sir:—I note with much interest your editorial regarding the course of study in landscape work. I think this is a good project and ought to be energetically carried out. This may be a good time, however, to call your attention to the fact that we are giving exactly this kind of instruction in the Massachusetts Agricultural College. We have a course of training in landscape gardening which covers the field as fully as it is possible to cover it in a two years' college course. This takes up the design of grades, roads, drainage, planting plans, nurserymen's estimates and everything of that sort. Besides that, there is thorough instruction in the propagation of plants, general horticulture, surveying, botany, entomology and the other sciences with which the landscape gardener ought to be familiar. The courses in floriculture, arboriculture and forestry are also open to the men who are studying landscape gardening and are taken up by nearly all of them.

Sincerely yours,

F. A. WAUGH.

BOOKS RECEIVED.

The annual report of Robert Aul, park commissioner for the city of St. Louis, is received and is perused with much interest. The volume is a model in typographical work and binding. Every second page is a half-tone illustration of park features and there are three large maps showing Forest Park as it was, the same when used as the site for the World's Fair, and again as restored under plans submitted by the Exposition Co. The total cost of purchase, improvements and maintenance of the St. Louis parks up to the present time is given as \$4,326,035.73.

"Evergreens, How to Grow Them" is a volume of one hundred pages by C. S. Harrison, president of Nebraska Forest Association and author of the Paony Manual and other books on garden topics. A mutilated land; The mission of the conifers; Evergreens for profit; Raising evergreens from seeds; Digging and hauling evergreens; Collecting evergreens in the Rockies; Foreign evergreens in America; are the titles of some of the chapters. The text throughout is that of a man deeply in love with his subject, is quaintly practical and sentimental by turns and deserves to be widely disseminated for it will set the people a-thinking, wherever it is read.

"A JOURNAL WORTHY OF A GLORIOUS ART."

Accept my hearty congratulations and my assurances of deep interest in HORTICULTURE and my feeling of satisfaction that at last we tillers of the soil are having published for us a journal worthy of the glorious art to which we have allied ourselves.—D. A.

We are indebted to Mr. F. W. Kelsey for the striking illustrations of *Pinus Austriaca*, Nordmann's fir and specimen *rhododendron* in bloom which adorn this issue of HORTICULTURE. They are from Mr. Kelsey's catalogue for this year.

PERSONAL.

John Bryan has been appointed head gardener at the central prison, Toronto.

Grobba & Wandrey of Mimico, Ont., have purchased the greenhouses of Thos. Plumb at Toronto.

F. H. Kramer of Washington expects to go out on the road with his rose, Queen Beatrice, this spring.

G. Tait has been appointed superintendent to P. Lehman, who is building a new place on Ocean avenue, Elberon, N. J.

A son was born to Mr. and Mrs. J. S. Fenrich, New York, on March 18. Mrs. Fenrich is the daughter of A. Le Mout.

Samuel S. Pennock of Phila. left for a visit to New England on the 20th, to serve as judge at the rose show in Boston on the 23d and 24th. Adolph Farenwald, George Burton and a number of others also attended the Rose Exhibition.

Arthur Schnutenhaus, a florist in the employ of Ed. Schiverin, nurseryman of San Francisco, one morning last week was held up, robbed of every cent he had and then ordered to walk home and not look back or his life would be the penalty.

R. R. Hughes, who for the past two years was superintendent for the late J. A. McCall, Elberon, N. J., resigned his position a few weeks ago and has joined forces with a well-known New York architect, and launched into the landscape business.

C. N. Ruedlinger of Hartford, Conn., has taken a position as forester on an estate in Minneapolis, Minn. On leaving Hartford, he was presented with a gold chain and appendage by the members of the Florists' Club and other friends, by whom he was held in high esteem.

Charles E. Keith has again been elected superintendent of the parks of Bridgeport, Conn., to succeed Stephen D. Horan. Mr. Keith held the position for a number of years, during which he demonstrated his eminent qualifications for the work, and we congratulate Bridgeport on his reinstatement.

Among the early arrivals in Boston for the rose exhibition are Fred. Sander and T. Mellstrom, of Sander & Sons, St. Albans, England, U. G. Scollay and E. A. Munro, Brooklyn, N. Y., George C. Watson, Philadelphia. Mr. Scollay covered himself with glory by catching a pickpocket as he alighted from the train in Boston on Wednesday morning.

M. H. Oppenheim, who already owns one of the finest places in Elberon, N. J., Castlwall, has now taken over Shadow Lawn, the summer home of the late J. A. McCall. This is one of the finest estates along the Atlantic seaboard, no expense having been spared on the landscape work. Wm. Webb, late gardener to Colgate Hoyt, has been engaged as superintendent of Shadow Lawn.

SAN FRANCISCO NOTES.

The State Board of Horticulture has declared a quarantine against Florida and Louisiana to prevent the importation of any nursery stock from either of these states. A quarantine had previously been placed against any citrus stock from these states, but it has been decided to bar out deciduous stock as well.

Selecting, packing and shipping Hannah Hobart carnation cuttings is keeping Superintendent Peterson and several assistants busy overtime these days at the John H. Sievers Company's nursery. The late advertisement in HORTICULTURE that the Hannah Hobart would be generally distributed about this time to all applicants was astonishingly fruitful. Orders for cuttings amounting to between eighty and ninety thousand have been received.

The March monthly meeting of the California State Floral society was held last week. Some officers for the ensuing year were nominated, but the whole matter was finally passed to next month's meeting, when the full list of nominations will be made and the election will take place. A fine exhibition of wild flowers and a fine talk about them in all their variety was given by Mrs. W. S. Chandler, an enthusiastic floriculturist and member of the society.

The Agricultural Department at Washington has determined to ascertain what can be done with the pistache nut in this state and has been in communication regarding the pistache nut with California's great nut culturist, Mr. C. M. Wooster, who will try to establish here the pistache industry. The immediate outcome of this is an arrangement to send 10,000 pistache nut trees, natives of the Nile region, to Mr. Wooster. Five acres will be planted at San Martin, Santa Clara county, and five acres at Lindsay, Tulare county. The value of the pistache nut is from \$1.25 to \$1.50 a pound. The nut is used in making flavors by confectioners and others.

OBITUARY.

C. E. Brady of the firm of Brady & Son, Eureka, Ill., died of heart failure on March 9. He was 63 years old.

Perry Finn died at his home in Carthage, Mo., on March 10. He was 68 years old. His wife and son survive him.

Edward Kitchenmeister, of New Brunswick, N. J., died of pneumonia on Saturday, March 17. Mr. Kitchenmeister had greenhouses at Highland Park, and store in the city. He leaves a wife and five children.

Della M., wife of A. L. Rogers died at Chaumont, N. Y., on March 7. Her husband and two daughters survive her. For many years Mrs. Rogers has held the office of vice-president of the Rogers Bros. Seed Co.

Two new varieties of *Begonia semperflorens* are well-spoken of by those who have seen them. They are *Berna*, with dark foliage and red flowers, and *gracilis luminosa*, with very dark leaves and deep red bloom.

NEWS OF THE CLUBS AND SOCIETIES.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS — EXECUTIVE MEETING AT DAYTON, OHIO.

The executive board met in Annual Session at Dayton, Ohio, on March 5, 6, 7. Extending over three days, the meeting was a very industrious one and many subjects of vital interest to the society were debated at much length. All the members were present except Treasurer Beatty, who sent a telegram regretting inability to attend. Messrs. E. G. Hill and John A. Evans of Richmond, Ind., George Asmus of Chicago and most of the local florists of Dayton were present during a portion of the deliberations of the Board.

Among the matters of general interest on which action was taken were the two exhibition projects—one an outdoor exhibition in connection with the convention at Dayton, in August, 1906, and the other the national flower show approved at the convention in Washington, last August and now proposed for the spring of 1907.

The scope of the outdoor exhibition comprises groups of conifers, also deciduous trees and shrubs on the grounds adjoining the pavilion in the County Fair Grounds where the sessions of the convention are to be held, also beds of cannas, asters, geraniums, dahlias, etc., and hardy herbaceous plants, including novelties, all to be provided for in a special reservation favorably located in the Fair Grounds. The result of the discussion of the proposed National flower show was a resolution to have the original committee continue the work of securing a guarantee fund of \$10,000 as a preliminary to the further continuance of the preparations and to have a competent committee prepare a draft of proposed prize schedule. The question of location of the exhibition was left open.

The program for the sessions at Dayton provides for the following: Opening session at 2 P. M., on Tuesday, August 21; President's reception in the evening.

Essays and discussions at the forenoon sessions of Wednesday and Thursday on "Recent Improvement in Retailers' Methods of Offering Flowers"; "The Ideal Private Gardener and His Work"; "Teaching Horticulture in the Public Schools"; "The Best Method of Marketing the Product of the Wholesale Plant and Flower Growers." This latter will come in the form of prize essays, for which President Kasting offers prizes of \$20, \$15 and \$10.

On Wednesday evening an illustrated lecture on some topics connected with out-door planting.

On Thursday evening a general discussion on the proposed National Flower Show.

On Wednesday afternoon the bowling events, under the management of the sports committee, George Asmus of Chicago, chairman.

Thursday afternoon is reserved as Exhibitors' Day and no other business or entertainment will be permitted on that afternoon.

Friday will be given to the Dayton Florists' Club for such use as they may decide upon.

The exhibition rules were amended so that the trade exhibition shall remain open continuously throughout

the sessions unless it is found to interfere with the meetings in which case the president may direct its temporary closing.

Favorable action was taken, providing for co-operation in the matter of parcels post improvement as advocated by the Postal Progress League, and in the campaign to secure a discontinuance of free seed distribution by the Department of Agriculture.

A committee was appointed to confer with the authorities of the Agricultural Colleges and secure if possible, better facilities for horticultural education for young men, and to provide for a series of practical lectures by competent representatives of the horticultural profession.

Action was taken under the instructions given by the Society at Washington last year to provide a badge book and corresponding numbered badges for the use of members at Dayton on a plan similar to that in use by the Nurserymen's Association.

Amendments to the by-laws relative to the method of electing officers at the annual meeting were drafted and will be presented for consideration in due time as provided in the by-laws.

The secretary was instructed to offer free exhibition space to those wishing to display bulbs of sorts not yet grown in this country in commercial quantities.

The usual appropriations for medals to be awarded through other societies during the coming year were made, inclusive of one bronze medal to be awarded through Vice-president Altick to the public school children of Dayton.

It was voted as the sense of this Board that in all future conventions after that to be held in Dayton the net proceeds from the trade exhibition be divided equally between the national and the local organization and not turned over entirely to the local organization as has been customary heretofore.

A telegram was sent as follows:—

"Hon. W. W. Cocks,
House of Representatives, Washington,
D. C.

"The directors of the S. A. F., now in executive session, Hotel Beckel, Dayton, Ohio, note your motion in House Committee on Agriculture and congratulate you on successful stand you have made against the free seed distribution. Can any of us help you by coming to Washington?"

"EXECUTIVE COMMITTEE."

At a later hour the following reply was received:

"Washington, D. C., March 5, 1906.
"Executive Committee, American Florists,
Hotel Beckel, Dayton, Ohio.

"Message received. Would be pleased to see any or all your committee. Arouse public sentiment through country is best plan; your approval appreciated."

"WILLIAM W. COCKS."

The committee on final resolutions presented the following, signed by Theo. Wirth and E. V. Hallock and same was adopted by a unanimous vote:

"We, the members of the Executive Committee of the Society of American Florists and Ornamental Horticulturists in meeting assembled, wish to state that we consider the selection of Dayton, Ohio, by the Society as the next meeting place for the convention

a most fortunate inspiration. Any member who had any misgivings on this score, has had them entirely dispelled—and in place of doubt has become enthusiastic as to the successful outcome of this convention.

"A Convention Hall of ample size to accommodate all trade exhibits, and to display them to better advantage than ever before has been secured. A circular building on high ground, with large windows, nine blocks from the center of town, insuring delightful conditions at all times. Surrounding ground that will display the outdoor exhibition to great effect, we feel that everyone will hereafter regret if the necessity arises to abandon this interesting outdoor feature in the future.

"Dayton, located in the center of the Middle West, is a revelation to many of the Eastern and Western members; surrounded by one of the richest and most beautiful sections of country in the entire United States. Agriculture, Pomology, Horticulture, Civic and Home adornment are carried to as high a place as anywhere in the world.

"The deliberations of this body were most ably and efficiently presided over by our new President, Mr. William F. Kasting, and the energy and good judgment he has shown in these proceedings will insure an interesting and successful Convention.

"The Committee extend their thanks to the resident members, Messrs. Ritter and Altick for their energy and kindness during the sessions of this Committee.

"It also wishes to express its appreciation for the kindness and goodwill shown them by Mr. Patterson, whose offers to help will make the Convention a great success; we are sure it will be highly appreciated by the Society next August, and whose support will insure our next Convention to become the banner convention in the history of the Association.

"The committee also wishes to extend to the local florists its thanks for their interest and hospitality, shown towards them and the coming Convention. We feel gratified that they agree with us that our National organization is not furthering the interests of the commercial side of our profession alone, but it is the means of promoting the Florists', Gardeners' and Horticulturists' interests in general, and that in coming to Dayton, we can be of as much help to them, as they so kindly offer to be to us.

"Finally, the Committee wishes to thank the business men and florists of Dayton, who so delightfully entertained them. The perfectly harmonious deliberations of this Body, and the extreme good feeling engendered is highly gratifying to your committee."

(Signed) { THEO. WIRTH,
E. V. HALLOCK,

WILLIAM J. STEWART, Sec.

Department of Plant Registration.

The Conrad & Jones Co., West Grove, Pa., submit for registration Canna Dr. Wm. Saunders (Brandywine X Mt. Etna) previously No. 1504.

Flowers bright scarlet, large size and firm texture; foliage bronze tinted, shaded amber red. It is self cleaning; early and continuous bloomer; flowers often 5 to 6 inches across.

Canna Ottawa, formerly No. 2060. Flowers bright carmine; stems 7 to 71-2 feet high; green foliage 51-2 feet; flowers 5 to 6 inches across.

W. J. STEWART, Secretary.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

About 100 members were in attendance at the meeting on Tuesday evening, March 20. The committee appointed to report on a class in landscape gardening outlined a plan for its conduct. About 25 members signified their desire to join such a class, and it was voted that the committee be continued in order to perfect their plan and that the class start in October. A letter from President John H. Dunlop was read, thanking the club for the many courtesies that were extended to the Carnation Society on their visit to Boston. Eleven members were elected, making the number at present 296. It was announced that there would be a club banquet on April 25.

A paper was read by D. Lumsden on plants and bulbs most in demand for Easter trade which we hope to publish in the near future.

A lively discussion followed. W. N. Craig thought *Lilium candidum* should be grown more than it is for Easter in preference to *Harrisii*. Mr. Farquhar had said that the deterioration of the bulbs was due to their being procured from Italy and Turkey; that when the bulbs were procured from the north of France there was no trouble with them; but their cultivation had gradually been forced back to Italy and Turkey, and no good bulbs could be raised there. Jackson Dawson said one reason was they were lifted at a time when they ought to be making their winter leaves; they should be kept in pots one year.

Mr. Cameron recommended that more novelties be grown, such as *ericas*, several varieties of *hydrangeas* and *epacris*.

Mr. Duncan suggested that the growers in the vicinity of Boston do not grow enough novelties, and when the stores want them they are obliged to go to New York; the Boston growers ought to manage to grow them as well as they do in New York. Mr. Palmer seemed to think people in Boston did not care to buy such. Mr. Elliott said that the rose Killarney was very desirable because it shows so many colors; that a rose got a black eye that was perfectly even in color. Mr. Montgomery retorted that Mr. Elliott was a wholesaler; that he would take a *Jacqueminot* rose that had turned a purplish blue and sell it for a new color.

A discussion followed on the best boiler for general heating purposes, in which Messrs. Montgomery, Elliott and others took part.

On the exhibition table were a well grown plant of *Cattleya Trianae*, exhibited by James Cartwright of Newton; *Schizanthus*, by Wm. N. Craig; *Lathyrus pubescens*, a new perennial, by Frederick Rea of Norwood.

MORRIS COUNTY GARDENERS' AND FLORISTS' SOCIETY.

The meeting of March 14 was Carnation Night, with a full attendance of members, as well as many outsiders. A fine lot of carnations were staged.

F. R. Pierson Co., represented by Mr. Ross, showed four vases of Windsor and three vases of Lawson. Windsor got a certificate of merit, and the Lawsons honorable mention. Cottage Gardens Co. showed Alma Ward, Elsa Struss and Robert Craig. The first two received certificates of merit. Craig had been certificated before and bore out its previous reputation. F. Boulon's Long Island Beauty, a real beauty, got honorable mention. Patten & Co.'s Pink Patten and Mikado suffered in transportation and could not compete. The judges "would like to see them again." John E. Haines' namesake was there in grand shape. It had been certificated on a former occasion. Guttman & Weber's Victory also had been certificated; "previous judgment fully upheld." H. Weber & Sons sent Jessica, My Maryland, and Mabelle. The first two had previous certification, which was fully maintained. Mabelle got honorable mention. A. B. Davis' Red Sport received honorable mention. R. Fischer's Abundance received a vote of thanks. Freesia Purity also received a certificate of merit.

Among the members, A. H. Secker staged one vase each of Flamingo, Enchantress, Harlowarden, Lawson and Prosperity; all were superb, receiving a certificate of merit. R. Vince staged one vase each of Fiancee, Dorothy Whitney, Enchantress and a crimson seedling of great promise. He received the congratulations of the judges. His Fiancee showed up fine. No split calyx or other defect. Mr. Vince received a certificate of merit for a batch of this variety he showed last fall. He believes it has a future, and intends to keep on growing it a while longer. H. L. Hand had a grand vase in variety. A cultural certificate was awarded. The judges were A. Herrington, Wm. Duckham and C. H. Totty.

Among those who have something promising in the way of sports and seedlings are Wm. Duckham, R. Vince, H. L. Hand, W. H. Thomas and Marshall Crissman. An essay by Mr. Secker completed the entertainment. It was well received and well backed up by his exhibit. A rising vote of thanks was tendered him.

HORTICULTURAL SOCIETY OF CHICAGO.

The preliminary list of premiums offered by the Horticultural Society of Chicago to be awarded at the annual exhibition in November next has been received. The show will last six days. Special displays are provided for as follows: Monday, chrysanthemums and plants; Tuesday, roses and orchids; Wednesday, carnations, violets, lily of the valley, and bouquets; Thursday, private gardeners' day; Friday, American Beauty roses, new chrysanthemums, new carnations; Saturday, floral arrangements, carnations. Copies of the schedule may be had on application to E. A. Kanst, assistant secretary, 5700 Cottage Grove Avenue, Chicago.

NATIONAL COUNCIL OF HORTICULTURE.

Acting upon a request from the landscape designer of the Jamestown Exposition for advice and co-operation, the National Council of Horticulture, at its last meeting, designated different committees for this purpose. These committees have since been approved by Mr. Warren H. Manning, landscape designer of the Exposition. The members are as follows: 1. Classification, Prof. L. R. Taft, Agricultural College, Mich.; Prof. S. B. Green, St. Anthony Park, Minn. 2. Awards, L. A. Goodman, Kansas City, Mo.; Phillip Breitmeyer, Detroit, Mich. 3. Standards of Excellence, Prof. W. W. Tracy, Department of Agriculture, Washington, D. C.; J. H. Dayton, Painesville, Ohio. 4. Preparation of Call for National Congress, H. C. Irish, Missouri Botanical Garden, St. Louis, Mo.; J. C. Vaughan, Chicago, Ill. 5. Special Events and Programmes, Phillip Breitmeyer, L. R. Taft, W. W. Tracy, L. A. Goodman.

H. C. IRISH,
Secretary.

COLUMBUS FLORISTS' CLUB.

Even a foot of snow on the ground did not at all interfere with a large attendance at the special meeting called by President Stevens for Tuesday evening, March 13. This meeting was made necessary by the large number of requests for the one cent packages of flower and vegetable seeds which our club annually puts up for the children of the Columbus Public Schools. Our members are very much at earnest in this matter of school gardens, also home gardens for the children; and a grand work is being done here. Not only did the members work a long evening packing these seeds, but several of their wives gave an evening also. The next regular meeting will be held Tuesday evening, March 20, when this seed work will

CHICAGO WHOLESALERS' ASSOCIATION.

A meeting of the Chicago Wholesalers' Association was held at the office of E. C. Amling, March 19th. The purpose of the meeting was to perfect plans of the association. The following members were then nominated for office to be elected at next regular meeting: President, F. F. Benthley of Benthley-Coatsworth Co.; vice-president, C. M. Dickinson, of E. H. Hunt; secretary, John Risch, of Weiland & Risch, and John P. Degnan of Chicago Rose Co.; treasurer, E. C. Amling, of E. C. Amling Co., and Leonard Kill of Peter Reinberg.

NEWPORT HORTICULTURAL SOCIETY.

A regular meeting of the Newport Horticultural Society was held Tuesday evening last, President MacLellan in the chair. Four men were elected members of the Society. The treasurer, Col. McMahon, submitted a report which was considered very satisfactory. Mr. Gibson also reported, showing a substantial amount in his hands. A resolution was introduced and unanimously passed to the effect that the Society make it known to the State's representatives in Congress that it is opposed to the free distribution of seeds, the members of the So-

ciety being of one accord in the belief that the free distribution of seeds is simply wasting the people's money, besides to some extent doing an injustice to certain business interests. The consensus of opinion was that a united effort should be made to stop this vote-baiting business, and that if a strong stand is now made, there is every likelihood of success. Dr. A. J. Anderson, a prominent Newport physician and a member of the Society, made a very pleasing and instructive address on Jamaica, from whence he but recently returned, whither he had gone to investigate the reports frequently made to him regarding the island as a health resort. The doctor said he returned more than pleased with all he saw, and fully convinced of the truth of all that had been told him in favor of the climate of Jamaica. The industrial conditions, the speaker said were rather unsatisfactory, all through lack of capital, but this, he said, was being gradually supplied in the shape of American money, just what the natives had all their eyes and some of their senses out watching for. At one time, when labor was obtained under different conditions from the present, sugar cane was extensively cultivated on the island, but now very little of it is grown, but of late years banana growing has been extensively engaged in, and it is reasonably certain to prove a profitable industry. Fruit of many kinds grows on the island, and very little care is necessary to raise most kinds. A vote of thanks was accorded the speaker for his address, which, while out of the ordinary run of addresses heard at meetings of this Society, it was, perhaps, for that reason, as much as for any other, exceedingly well received and listened to with close attention by every one of the large attendance.

Prof. Kenyon L. Butterfield, of the Agricultural College at Kingston, is expected to address the Society at the next meeting, March 27. Prof. Butterfield soon will assume the presidency at Amherst, and it is more than likely that his visits to Newport will be far between after he betakes himself to Massachusetts.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the meeting on March 12, H. A. Jahn gave an instructive talk on "Hybridization of the Dahlia." Arrangements were made for an illustrated lecture on the brown-tail and gypsy moths by Prof. Wm. Lyman Underwood of Boston, on the evening of March 23, and by the Messrs. Farquhar of Boston, on March 27, on "Flowers."

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

At the meeting on March 20, papers were read by Henry Cliff, gardener to O. G. Jennings, on Carnations, and by J. N. Champion, on Cut Flowers. Mr. Cliff exhibited some 50 new seedlings of his own raising, a noticeable feature in most of them being the fine fragrance that so many of the commercial varieties now lack. Both papers were very interesting.

CLUB AND SOCIETY NOTES.

The Gardeners' and Florists' Club of Boston, will hold a club banquet on

April 24. Ladies are invited, and there will be entertainment and dancing.

The first field day of the year will be held by the Gardeners' and Florists' Club of Boston at the establishments of Wm. W. Edgar and Pierce Bros., Waverly, on Saturday, March 31.

The Worcester County Horticultural society celebrated the 64th year of its work by a banquet and dance on March 14. The guests of honor were President Carroll D. Wright of Clark College and Mayor Duggan.

The next meeting of the New York Florists' Club will be held Monday evening, April 9, and will be Rose Night. Any one having a novelty in roses, also growers of standard varieties are requested to make an exhibit. The essayist of the evening will be Benjamin Dorrance, of Dorrance-ton, Pa.

A meeting of the Elberon (N. J.) Horticultural society was held on the 19th inst. The night was a very stormy one and the attendance small. Two visitors were present, W. W. Kennedy, vice-president of the Monmouth County society, and W. F. Ross, representing F. R. Pierson Co. of Tarrytown, N. Y.

The Missouri State Horticultural Society will hold its summer meeting at Moberly, June 12, 13, 14, 1906. Part of the program was arranged at the last meeting of the Executive Committee, but suggestions for topics for discussion, questions, facts and experiences from any of the fruit growers will be welcomed.

The convention of the Massachusetts Fruit Growers' association opened in Worcester on March 15. The matter of setting apart a national apple day was discussed and the hearty approval of the society given to it. Among the speakers Prof. F. W. Card of the Rhode Island agricultural college spoke eloquently of the need of modern business methods in fruit growing, laying particular stress upon the necessity of advertising. Prof. F. A. Waugh of Amherst called attention to the necessity of pruning trees, a feature that has been overlooked in late years since spraying has become so necessary. The meetings have been largely attended, and the fruit exhibited has been a credit to the county.

MOVEMENTS OF GARDENERS.

Harold Vyse has taken charge of G. E. Kissell's estate at Morristown, N. J. H. L. Hand leaves G. E. Chisholm, Morristown, N. J., to accept a more remunerative position at Portchester, N. Y.

Hugh Birch, lately with D. H. McAlpin, Morris Plains, is now in charge of Hon. Seth Low's place, Mt. Kisco, N. Y.

Robt. McMullen, for 15 years gardener to Mrs. G. F. Stow, Morristown, N. J., resigns his position, to take effect April 1.

John Whalen, now in charge of R. A. McCurdy's place, takes charge of the Armour place, Normandie Heights, on March 15 next.

Prof. Harold H. Hume, for the past four years connected with the State Agricultural College at Raleigh, N. C., has been appointed professor of horticulture at the new Macdonald College, at St. Anne de Bellevue, Canada.

NEWS NOTES.

The wholesale flower store of John J. Perkins, 115 West 30th street, New York, was broken into and a type-writer stolen last Sunday.

Edwin Hoyt of the New Canaan Nurseries, Conn., has recently added sixty acres to his already large grounds, and will plant the tract with young trees.

The town of Greenfield, Mass., has voted \$5000 for the commencement of work on a mountain park, with a plan for further appropriations when required.

Frank W. Ball, for several years with J. A. Peterson of Cincinnati, has accepted a position with George & Allan and will have charge of the cut flower and design work.

Fred Windmiller, the manager of the Livingston Seed Company's greenhouses at Columbus, Ohio, has for some years been hybridizing and working for new varieties in the carnation line. He has obtained some most satisfactory and extremely elegant new sorts.

A bowling match between the gardeners of Wheatley Hills and Glen Cove, L. I., N. Y., took place on Tuesday evening, March 13, at Glenwood, resulting in a victory for Glen Cove by 26 pins. Messrs. Trepass, Cleres, Harrison, Willesen and Brown composed the Glen Cove team; Messrs. Johnson, Bertanzel, Kennedy, Dumbroski and Everett, the Wheatley Hills team. The scorer was A. J. Richards.

FORCING LILACS FOR THE HOLIDAYS.

One German lilac grower writes: "We forced our pot-grown lilacs this year for Christmas and New Year's with great success; had practically no miss, there being only three plants out of several hundred that did not do well. We used Marie Legraye and Charles X., and cold stored them three weeks before forcing in a temperature of about 23 deg. to 25 deg. Fahrenheit; this evidently helped them considerably. Had the same good results with our lily of the valley; forced 150,000 for the holidays and did not lose five per cent.

NEWPORT NOTES.

The prospects for a good season in Newport are growing brighter as the time approaches. Stock is plentiful in most lines with nearly all the growers. Quality is good and growth in an advanced state. The demand for outdoor planting promises to be above the average. Easter stock is not over abundant nor too far in advance as to growth for the time for which it is intended. Tree planting and tree moving has been going on all winter and the places where these operations were carried on will soon receive finishing touches.

BUSINESS CHANGES.

The Alameda Greenhouses at Roswell, N. M., have been taken by F. O. Santheson.

Harry Rowe, formerly at 35 E. Monroe street, Chicago, is now located in his new and larger store at the Palmer House, 42 E. Monroe street.

THE SELLING AND PACKING OF CARNATION BLOOMS AND CUTTINGS.

(Extracts from a paper read before the
Chicago Florists' Club March 6th,
1906, by J. D. Thompson.)

In shipping, too much care can not be taken in the selection of bloom and in packing same. In our experience we have all had complaints that blooms reached their destinations in a sleepy condition and of those shipped a short distance not keeping as well as they should. I immediately set to work to determine where the trouble was. I would pick blooms at different stages of maturity and tried keeping them in water all the way from six to twenty-four hours before shipping, but with the same results I then made a test of the keeping quality before and after fumigating,

and found that blooms picked before fumigating would last in our cooler for ten days and those cut after fumigating would last but three days. I then tried different insecticides until I found one that did not destroy the keeping quality of the blooms and at the same time was effective. Since then we have had no complaints.

Good packing is very essential. We first line the box and then place layers of wet paper in the middle where the stems come and pack the layers of blooms in rows from each end of the box, placing a layer of paper in the center on each row of stems and so on. If the shipment is to be in transit over 15 hours we put in a small piece of ice, but it is not necessary to use ice if the shipment is only to be on the road over night.

The packing and shipping of rooted cuttings of carnations is an important matter. In the cuttings received we find that nine times out of ten the moss around the roots is too wet. This has a tendency to damp them off if they are three or four days in transit. Again while some shippers get the moss prepared properly, they use old newspapers or manilla paper to wrap the bundles in, the paper often absorbs all the moisture and the cuttings reach their destination in a wilted condition. I find that wetting the moss thoroughly and then squeezing it as dry as possible and allowing it to remain over night before using, insures good results. In wrapping bundles, use heavy wax paper; in this way the paper does not absorb the moisture left in the moss.

Bulbs for Easter.

Hyacinths, Jonquils, Tulips, first-class bulbs, just right for Easter flowering, $4\frac{1}{2}$ in. pots, \$1.50 per doz., \$10.00 per 100.

WABAN ROSE CONSERVATORIES
NATICK, MASS.

There are many purchasers of cuttings who seem to think that every cutting should live; our experience has been in establishing those shipped in to us, we lose from five to ten per cent. I regret to say that there are many in the craft who receive cuttings in good condition and after 30 or 60 days when they receive a statement of their account, write and say that "The cuttings which you sent me arrived in poor condition and I have lost over half of them." This is the first intimation that the consignor has had that the cuttings were not satisfactory, and under the circumstances he can not, and should not be held responsible for any mistreatment the cuttings have received while in the purchaser's care.

When cuttings are received by the purchaser upon examination of same, if they are not found to be satisfactory or as represented by the firm from whom he is buying same, he should wire to that effect at once, "Cuttings not satisfactory, here subject to your order." If the cuttings are accepted and no complaint made immediately, it goes without saying that they were satisfactory at the time received and the purchaser of cuttings should not expect the shipping firm to stand a loss which the consignee may have occasioned by mistreatment in establishing.

We have found it well to have printed instructions and put them in the box with every shipment of cuttings, advising the purchaser as to the treatment they should have. When

we are making such shipments, unless otherwise instructed, we advise the party by mail the day of shipment that we are sending a quantity of cuttings by express, naming the company. In this way there will be no delay and the consignee receives his cuttings promptly, for if the express company fails to advise him he can be on the lookout himself for their arrival.

We must bear in mind that a satisfied customer is our best advertisement and our aim should be quality, not quantity. To paraphrase what a certain writer once said, "Bulk-quantity, whether of bank notes or piled-up masonry or population, amounts to but little." It is quality that tells the story. The character that is in us and in what we produce, the moral worth that we represent, the good that we are doing, not for ourselves and for today, but for others and for the generations to come, and, in order that we may level up according to the best standards and achieve real success, it means that we must have the thread of the "square deal" running through all our transactions with one another as florists as well as with the world at large. And when we consider what the carnation stands for in all its loveliness and ideality we have a shrine before which we can be glad to worship.

A MODEL NURSERY

The F. R. Pierson Co.'s nurseries at Scarborough, N. Y., of which an account was given in the first part of this issue, are among the most interesting in the country.

The main drive is there, but on account of the layout and arrangement of the plantings. The busy head of this establishment, whose portrait appears herewith, has an appreciation of the beautiful in his work which the commercial spirit can never smother; hence a large area of nursery space is reserved for ornamental arrangement along the roadside and skirting the many driveways which wind through the place. The effectiveness of this method is enhanced by the splendid view of the Hudson river which the nursery overlooks and the mountains beyond, all combining in a picture which once seen, will never be forgotten.

The planting plan alluded to is not, however, without its utility. Care is taken in the groupings to show each species and variety in its best aspect, and each is given as companions those contrasting or harmonizing sorts that would be selected by an expert planter for such a use if the plantations were intended to be permanent. Hence the entire outlook, whether from the roadway or the drives, is an object lesson not alone in plants but in planting.

F. R. PIERSON

The prospective purchaser may, if he or she so desires, sit in a carriage and in a drive about the nursery inspect and select the stock wanted and at the same time absorb valuable information as to its best use. This is a cardinal principle of the plantings; practically everything offered in the collection is brought forward in specimens and groups of the various sizes in stock where it may be seen in the manner described, and as a proposition for the nurseryman who is looking for retail trade it has the old-fashioned "nursery row" system distanced beyond recovery.

Much more could be said about this interesting place. The greenhouses and their contents—the Pier-soni fern, Winsor, White Enchantress, and other carnations which are a specialty here—have been alluded to in former issues of HORTICULTURE, and we expect to touch frequently in a more detailed way in the future on topics connected with the outdoor nursery department. Plans are now being made for a large addition to the greenhouses and the nursery grounds are being steadily extended. It certainly is a most interesting and inspiring place to visit, for everything seems to be done just right, and the stock, from the largest specimen down to the rooted cutting, is as good as intelligent care can produce.

ENTRANCE TO F. R. PIERSON CO. NURSERIES, LOOKING OUT.

Three Sterling Carnation Novelties

Winsor, White Enchantress, and Helen M. Could

There is nothing about any of these varieties that we wish to conceal; therefore, we cordially invite all carnation growers to pay us a visit. Come at any time.

WINSOR—Winner of Lawson Silver Medal.

This is sure to prove a winner. Nothing approaches it in color, which is a clear silvery pink—a shade between Enchantress and Mrs. Thos. W. Lawson—and much more beautiful than either. In fact, it is just the shade that we have all been trying to get. The color will make it sell in any market. The stem is just right. The flowers are considerably larger than Lawson and much better shaped. As a grower it has everything that can be desired. So far we have not seen any large-flowering variety quite so free as Winsor.

WHITE ENCHANTRESS.

A pure white sport of Enchantress, at once the most popular and most profitable carnation grown today, on account of its size and stem and freedom with which it blooms. White Enchantress is identical in every respect but color. Those desiring quality as well as quantity will find it in White Enchantress.

HELEN M. COULD.

This is a beautiful variegated sport of Enchantress. The ground color is a lovely shade of clear pink, the variegation carmine, making an exquisite combination of colors, besides being something distinctly new. At a short distance the variegation does not show at all, the general effect being a beautiful shade of dark pink. Growth, habit, size, and stem are the same as Enchantress.

We have fine stocks from which we can deliver healthy cuttings of Variegated Lawson, White Lawson, Red Lawson, Enchantress, Mrs. M. A. Patten, Lady Bountiful, etc.

Our Variegated Lawson is all that we claimed for it last season, and is giving the fullest satisfaction everywhere—the best in the variegated class. Come and inspect our stock of new and standard sorts

ROOTED CUTTINGS

Robert Craig, Victory, John E. Haines, White Perfection, Variegated Lawson and My Maryland. Also all the leading commercial varieties. Send for list.

WM. SWAYNE, Kennett Sq., Pa.

Some People have taken our advice as published in

these columns recently and are buying **My Maryland** for trial. We reiterate here—it succeeds with you as it does with us, it will prove the best white carnation you ever grew. Despite the variety's apparent failure in several places, we strongly advise all growers to give it a trial. We have been frank about its faults as developed in other places. We doubt if these will develop in many places.

Jessica we believe, will succeed generally, and will prove to be the best red and white variegated ever disseminated. Few varieties show as strong constitution as this one does, and it is a wonderful producer. Extra fine stock of both varieties ready now. R. C. \$2.50 per doz. \$25.00 per 100. \$100.00 per 1000. Pot plants, \$1.00 per 100 extra. Send for our catalog, now ready.

PHILADELPHIA NOTES.

Messrs. Davis and Wilson are back at their old posts with the Niessen Company.

Robert Kift is asking an extension to May 15th on his second installment due Jan. 15th.

Paul Klingsforn, of Dumont's, is back in harness again, after a three weeks' siege of typhoid.

The annual spring show of the Pennsylvania Horticultural Society will be held in Philadelphia, March 27, 28 and 29.

A meeting of the creditors of C. P. Poryzees was held at the office of Attorney W. Furst on the 19th inst. A satisfactory agreement was concluded and the business will be continued.

Mr. Turnbull was in town on Saturday with an exhibit of the new rose, Miss Kate Moulton. He had an opportunity to greet many of his old friends in the trade here, and incidentally to book a few good orders for the newcomer.

Easter plants among the Philadelphia growers never looked finer than they do this year; and the stocks to choose from were never so large nor so varied. Among the most notable collections are those of William C. Smith, at 61st and Market streets, Robert Craig & Son, Godfrey Aschmann, Wm. K. Harris, Jacob Becker and C. Harry Campbell. Samuel S. Pennock, who represents most of the best growers of the vicinity, is now mailing his special offer, which includes several desirable new Easter subjects.

CATALOGUES RECEIVED.

"Rosy Propositions." This is the wholesale price list of the Leedle Floral Company, Springfield, O. Devoted exclusively to roses.

Bobbink & Atkins, Rutherford, N. J. This catalogue is a beauty, up-to-date in every feature, illustration and type unexcelled, and there is nothing omitted in the long list of ornamental trees, shrubs and herbaceous plants that one could wish for. The cover shows a bird's eye view of the extensive nurseries. The wholesale list of this firm is also out.

Frederick W. Kelsey, 150 Broadway, New York. Catalogue No. 55, Choice Trees and Hardy Shrubs. Mr. Kelsey has chosen for the cover adornment of this elegant catalogue the beautiful flower sprays of white crataegus. The illustrations are original half-tones and the book is typographically a gem. The contents will be found deeply interesting to the student of advanced gardening art. The lists are very complete.

SEED TRADE.

The Crenshaw Bros. Seed Co.—John A. Crenshaw, I. A. Crenshaw, F. S. Love, H. P. Inabinet, H. S. Hampton and J. A. Griffin have incorporated under the name of The Crenshaw Bros. Seed Co. of Tampa, Fla. Capital stock, \$25,000.

Anyone Can Grow The Improved Countess of Lonsdale (Dahlia)

This is by far the most handsome and useful Dahlia of the Cactus type introduced to date. The flowers are large and the color is intense crimson scarlet, lighting up beautifully at night. The flowers, very large, are borne on tall, stiff, erect stems and their profusion is extraordinary. Among the many Dahlia blooms shipped into the New York Wholesale Market none are more popular with the retail Florist than the Improved Countess of Lonsdale. Strong divided field-grown roots. Price six for \$1.00, \$1.75 per doz., \$12.00 per 100.

WHOLESALE
GROWER OF CUT FLOWERS

VICTORY

We do not need to advertise Victory aggressively any longer. We are making prompt deliveries of Cuttings daily and are giving universal satisfaction. ENOUGH SAID!

CUT FLOWER MARKET REPORTS.

BOSTON Roses are selling fairly well this week. All varieties, but particularly Bride and Bridesmaid are much larger and of better quality in all respects than of late. Carnations are plentiful especially Lawson and Enchantress. White carnations are not so abundant. Violets, lily of the valley, sweet peas, narcissi, freesias, etc., are all to be had in abundance. Smilax is getting scarce and price advancing.

CHICAGO Business has not been so brisk, the snow storms of the past few days keeping the transient trade at home. There is a general rejoicing among the rose growers, as the stock has improved excellently both in quality and quantity. Beauties are gradually improving. Bulbous stock remains the same. Extra long callas shipped in this morning were soon disposed of. The demand for lily of the valley and violets continues as brisk as can be expected.

CINCINNATI The advent of Lent thus far has scarcely been noticeable in the cut flower market. Business continues to be very satisfactory, and the demand is steady. The supply of stock is increasing, and some days it looks as though the market was bordering on a glut, but so far there has been no serious oversupply. March has been a hard month on roses, and the dark weather has had a telling effect on their growth. The proportion of second grade stock is large, and the indications are that it will be greater from now on. Carnations are plentiful; the grade is up to the standard, and vast quantities are sold each day. Bulbous stock is coming in fine, and is in such shape that it will hold out till after Easter, no matter what the weather conditions may be. Lily of the valley and Harrisii are good, and the supply and demand are just about equal. Violets hold out well, but the price has dropped and many were jobbed off at any old price. Pot plants for Easter are going to be scarce, with possibly the exception of Harrisii lilies, and they will bring almost the same figure when sold as a cut flower, and at much less trouble to the grower. But few of our growers care to sell pot lilies and will only supply their regular customers with them.

COLUMBUS Saint Patrick's Day brought a very nice flower business indeed; in fact, much more trade than the very dull days of the first of the week seemed could be pos-

sible. Apart from this trade on Saturday, it has been one of the duller weeks since the year came in. Bulb stock is still very plentiful, and so are carnations; both selling in quantities as low as \$1.50 a hundred. It is very dull even for the Lenten season—but it will not be very long now to Easter, and the usual April weddings.

DETROIT The usual celebration of St. Patrick's day took place, but with mild doings compared with former years. The opportunity for a green display is a very handy one for the florists, and many made good use of it by trimming with their regular stock. While every day was not a busy day, still the week sums up to good advantage. At times the wholesalers will be over-stocked, and then again, a trifle short. When the wholesaler finds his vases filled, the retail grower finds the same, and if one finds stock scarce, so does the other, and then again, the retail grower is at present engaged in the reducing of bulbous stock, which comes in bulky lots. White carnations, which are still scarce, sell readily at a good margin. Violets are too numerous for ready use, and many lay over. Roses are not extra as to quality, and Beauties are almost forgotten. Sweet peas are good in quality, but selling slow.

INDIANAPOLIS During the last two weeks trade has not been up to the average. Bulbous stock is coming in at its best now, but no fancy prices received. Roses are in fairly good supply, with demand for better grades only, while Beauties have at no time been in excess of demand. The quality of all kinds of stock is unusually fine. Violets, lilacs, lily of the valley and sweet peas are to be had in most any quantity. There has been quite a scarcity of Easter lilies so far. Blooming plants are to be seen in variety everywhere, and spring-like weather is all that is required to bring good returns in sales of same.

LOUISVILLE Business conditions the past week were about as good as could have been expected, the weather being very poor. Stock in general was in fair supply, and not many disappointments were heard of. Carnations and roses found a demand up to expectations, the supply and quality being satisfactory. Violets and forget-me-nots find great demand. Mignonette moves slowly. There is a steady call for bulbous stock and no lack of it.

NEW YORK Business has lagged considerably for the past week, and all that prevented a further downfall in values has been the rather moderate supply of flowers. Daily receipts are, however, rapidly increasing in quantity and present prices have a very weak footing, with a probability of considerable break on some lines before the end of the week. American Beauty roses, which may fairly be regarded as a gauge of the general market, are offered at about one-half the prices of two weeks ago, and the sales are slow. Smilax is scarce and higher.

PHILADELPHIA Monday of last week was an encouraging starter for business, but the heavy storm on Tuesday hurt things badly, this condition continuing Wednesday and Thursday. Friday and Saturday were better and on the whole stock moved off pretty clean for the week especially as there was some shortening up in supplies. St. Patrick's Day was observed more than ever in a floral way and it would seem that all our holidays are now becoming more of a factor than heretofore. The supply of carnations fell off and the glut of the preceding two weeks is now over. Beauties are more plentiful and prices dropped another notch. There was a land office business in Killarneys on St. Patrick's Day. Lily of the valley moves slowly, there being a good deal of other white material at reasonable figures such as Roman hyacinths, narcissi, freesias, lilacs, etc.

Always enterprising, we are now ready with a fine line of Easter Baskets.

For a number of years we have used the FUMIGATING KIND TOBACCO POWDER; it has never yet failed to do the work claimed for it. We use it for everything as it positively will not harm foliage.

WM. G. SALTFOORD, Pokeepsie, N. Y.

Why not ask for a free five pound trial sample, it's convincing, it only costs you the express charge. It's no new fangled thing, hundreds write of it like Mr. Wm. G. Saltford. Our booklet tells how to fumigate a house 100x25 feet with it for fifteen cents. THE H. A. STODOLFF COMPANY, 119 West Street, New York City, N. Y.

CUT FLOWER MARKET REPORTS.

Business in St. Paul and Minneapolis has been a little better the past week. Notwithstanding Lent, there are many reasons why the flower trade should be fair, and no matter what the season may be, funerals must have flowers. So after all, the florists manage to keep busy. Stock of all kinds is plentiful now. In carnations, Lawson and Enchantress lead, but roses of every description are in such abundance that they really have no leader. Tulips, sweet peas, violets and all small stock are very good, and among the larger flowers *Harrisii* and *callas* are supreme. A few high grade snap-dragons are to be had at high prices.

Business has been considerably better than during the first weeks of Lent. Contrary to custom, we had beautiful weather for St. Patrick's day, which was really the first good day in a week. This partly accounts for the very good trade, as by 2 P. M., there were no Beauties to be bought in town, and very few violets and carnations.

INCORPORATED.

The Waxahachie Nursery Co.: J. R. Mayhew, C. C. Mayhew, W. W. Robinson, Baltimore, Md.

E. Smith & Sons Co.: Nelson C. Smith, Wm. A. Smith, F. R. Smith. Capital stock, \$150,000. Geneva, N. Y.

The Chicago Wholesale Florists' Association: C. M. Dickinson, Leonard Kill, E. E. Peiser, Chicago, Ill.

The Albany Nurseries: Albert Brownell, J. R. Houseweart, B. F. Pierce, Albany, Ore. Capital, \$25,000.

LIST OF PATENTS.

Issued March 13, 1906.

- \$14,799. Fruit Clipper. Howard H. Petty, Pomona, Cal.
- \$15,132. Lawn Mower. Howell P. Terry, Elizabeth, N. J., assignor to George F. Cornell, Brooklyn, N. Y.
- \$15,242. Grass Collector for Lawn Mowers. La Fayette Wildermuth, Columbus, Ohio.

The official zoologist of the State of Pennsylvania says he has tried all of the remedies sold under patent or fancy name for the destruction of San Jose scale, and says none of them are as good as the lime-sulphur wash. Salt is not necessary, but will do no harm. It causes the spraying apparatus, especially the nozzles, to wear out much faster, and does not make the liquid stick much better, if any. His recipe in brief is: Twenty-two pounds fresh stone lime and 17 pounds flowers of sulphur boiled together one hour. Add enough water to make 50 gallons. Apply any time before the buds burst.

GREENHOUSES BUILDING AND PROJECTED.

- Milwaukee, Wis.—B. Gregory.
- St. Paul.—C. Bussjaeger, one house.
- Lebanon, Pa.—C. C. Yost, two houses, 30 x 140.
- Lowell, Mass.—Roper, the Florist, one house.
- Owings Mills, Md.—W. Terry, one house, 21 x 115.
- Berlin, Ont.—H. L. Jansen, four houses, 25 x 300.
- Charles City, Ia.—Sherman Nursery Co., three houses.
- Meramec Highlands, Mo.—N. Him-mers, five houses.
- Natick, Mass.—Robert Montgomery, one house, 40 x 350.
- Baltimore, Md.—Loudon Park Cemetery, one house; 25 x 50.
- Orion, Mich.—Harvey & Sons, four houses, each 25x100; two houses, each 20x100.

FIRE RECORD.

Two greenhouses belonging to William E. Lacey at Victoria Bismarck, near Easthampton, Mass., were destroyed by fire on March 16.

Two greenhouses owned by D. E. Horton of S. Rehoboth, Mass., stocked with cabbage and tomato plants, were burned on March 13. Loss \$800.

The Brookside Greenhouses, owned by Andrew Olsen, Fall River, Mass., were destroyed by fire on March 14. Loss is estimated at nearly \$4,000, partly covered by insurance.

George Patty will continue the business of the late H. C. Beebe, at 70 Ferry street, Middletown, Conn.

"BEST GREENHOUSE MATERIAL"

The best is the cheapest in the end. "Cheap" greenhouse material is expensive.

It costs just as much to erect houses with poor material as it does with the best—usually more.

The houses must be often repaired and the work and cost of erecting soon repeated.

The progressive florist uses the best as he knows it pays to pay for quality.

Send for an estimate on your present needs and let us tell you about our material—the best material.

46 MARION ST., NEW YORK

About Sizes Again

Last week we talked together about the 46 feet house and some of the economies in maintaining these large houses — but the erection costs are just as strong in their arguments. Growers seem inclined to ignore the fact that a house 11 feet wide requires the same sides and ridge, same work to frame; same glass and paint and same heat as the 30 feet house.

One wide house is not only cheaper to maintain than two small houses of equal area, but a great deal cheaper to erect.

Cutting expense down is one thing; cutting it off at both ends (building end and maintaining end) is another. The large house, cuts both ends.

NOVELTIES IN ROSES

The four magnificent novelties from Pernet-Ducher, viz.: Mme. Philippe Rivoire, Mme. Melanie Soupert, Mme. Jeannie Gillemot and Instituteur Sirdey,—these are four justly famed varieties from his celebrated strain.

Cherry Ripe from George Paul & Son,—this might be termed a dwarf American Beauty, a fine variety; Angelo Peluffo, Reine de Italy, two handsome additions from Soupert. Three new hybrid Rugosa roses from M. Gravereaux—these should prove unusually interesting for American gardens. Hugh Watson, Hugh Dickson, Gartenwalt, three promising H. P's, La Neige and Venus, two interesting novelties in the Moss section.

We will send 12 of these novelty introductions for \$5.00; or where 50 are taken, \$17.50; \$35.00 per hundred.

Our collection of novelty Chrysanthemums is the finest and most select of all in the United States; we are offering some unusually fine exhibition novelties not catalogued by any other firm in the country. We will select for any one 12 of the very finest novelties of the year for \$5.00, or one hundred for \$35.00.

Remember you can get Richmond roses from the originator by sending to us—price on plants or rooted cuttings on application.

400 plants of Polygonum Balduschianicum, one of the finest new plants, hardy, produces a wealth of white flowers. \$3.50 per dozen, strong plants.

THE GASSER
COMPANY,
Choice Cut Flowers
and Artistic Flor-
al Work,
Euclid Avenue,
Cleveland, O.,
March 17, 1906.

Mr. F. H. Kramer,
The sample blooms
of your new rose,
Queen Beatrice,
came in perfect con-
dition and we want
to say "it is a
beauty," and we
find it lights up per-
fectly under artifi-
cial light and as to
its keeping quali-
ties, it is unsur-
passed; as it was in
perfect form and
color several days
after received by
us.
Respectfully yours,
THE GASSER CO.

BLACKSTONE,
Florist,
Washington, D. C.,
Mr. F. H. Kramer,
Washington, D. C.

Dear Sir:—
Permit me to
commend you on
success in getting
the exclusive control
of the new pink
rose, which you
have since named
Queen Beatrice.
I consider it a
splendid thing, and
I believe it will
prove to be one of
the most profitable
varieties, for the
grower especially,
that we have had
in years.
Very truly yours,
Z. D. Blackstone.

THE LEO NIES
SEN COMPANY
Wholesale and Com-
mission Dealers in
Cut Flowers,
Plants, Supplies,
1217 Arch Street,
Philadelphia, Pa.,
Mr. F. H. Kramer,
Dear Sir:—

We do not hesi-
tate to say that the
Queen Beatrice
would prove a very
desirable acquisition
to our roses. We
are not in a posi-
tion to speak about
its productiveness,
etc., we will leave
that for the grower
to say, but commer-
cially, its selling
qualities are beyond
question. We feel
confident that we
could find a ready
market for the flow-
ers, and believe, as
from all accounts it
is very productive,
Queen Beatrice cer-
tainly will have a
great future.

Wishing you suc-
cess, we remain,
Yours respectfully,
THE LEO NIES
SEN CO.,

GUDE BROTHERS CO.
Florists and Floral Decorations,
1214 F St., N. W.,
Washington, D. C., January 18, 1906.

Mr. F. H. Kramer, Dear Sir:
In reference to the new Rose, "Queen Beatrice," I am pleased
to say that I have watched it growing and blooming for more
than two years and believe it to be one of the best and most
profitable for every cut flower grower, having all the good quali-
ties and apparently no bad ones, it being a free grower of prodigious
color on long stiff stems and of them.
Very truly yours,
WM. F. GUDE.

Wholesale Florist,
Mr. F. H. Kramer,
Washington, D. C.,
I had quite some
time to look over
your new rose,
"Queen Beatrice,"
and I am very
pleased to say
that it is a
very fine rose,
both in shape and color, and
I am sure it will
be a great success.
Yours very truly,
GEORGE FIELD.

GEORGE FIELD,
3507 Brightwood Avenue,
Washington, D. C., March 9, 1906.
I wish to state that
I have seen "Queen Beatrice," I have
pressed with it and thought it would
be a great success, the length of stem, size of
buds, both in shape and color, and
the Rose covers. Yours very truly,
GEORGE FIELD.

EDWARD REID,
Wholesale Florist,
1526 Ransstead St.,
Philadelphia, Pa.

Mr. F. H. Kramer,
I wish to congrat-
ulate you on your
new pink rose,
"Queen Beatrice." I
consider it a rose
entirely in a class
by itself, and up to
the present time I
do not think we
have anything to
compare with it. As
a wholesaler, I pre-
dict an enormous
demand for same,
and you can feel
assured that when-
ever the blooms are
ready to market,
Philadelphia wants
its share.

Yours respectfully,
EDWARD REID.

GEO. C. SHAFFER
Florist,
Phone 2416 Main,
14th and Eye Sts.,
N. W.

Washington, D. C.
Queen Beatrice, the
new Rose grown by
F. H. Kramer, is a
beauty. The dark
green foliage, long
stiff stem, and mag-
nificent flowers
which are simply
beautiful at all
stages of develop-
ment, from the
small buds to full,
open flowers, which
have an agreeable
fragrance, together
with its color,
which has a pleas-
ing effect, are sure
to make the rose
popular and well
worthy of the name
Queen.

As a seller it
ought to be unsur-
passed.
GEO. C. SHAFFER

S. S. SKIDELSKY,
Philadelphia, Pa.

Mr. F. H. Kramer,
I wish to congrat-
ulate you upon the
success of your
"Queen Beatrice."
That your rose is a
winner, goes with-
out saying, and that
it is sure to replace
some of the "stand-
ards" of today
seems to be the
foregone conclusion
of those who saw it
at your place.

As you know, I
am ever after and
in quest of "good
